PLATES: The work contains an engraved frontispiece portrait of Bytemeister and 28 other engraved plates. The frontispiece is actually a smaller picture that has been pasted down to the verso of the leaf facing the title page, and therefore does not constitute a true plate. However, it is a finely executed picture of Bytemeister within a rectangular frame, showing his head and torso. It contains the text immediately under the portrait, "Henric, Johanes Bytemeister | Libb. Artt. Met. Philos. D. Academic | Julice Assessor. | Sym. Ex verbo fides, ex fide salus. | ad Rom. C. X. 17. et C. III. 28." The picture is signed at the bottom, "Joh. Georg Schmidt sculpsit Brunsvig. 1734." Plates I-VIII show renderings of artificial items such as mechanical apparatus, instruments, scales, looms, and other man-made curiosities, while plates IX-XXVIII illustrate items thought to be natural. These include archological artifacts, corals, dendritic patterns, and fossil shells and fish. Each individual illustration is numbered so that its picture may be matched with the description in the text. The plates are numbered Tab I to Tab XXVIII, with Tab XVII folding. All of the plates at the end are signed in a fashion similar to Ant. Aug. Beck delin, Io. Georg Schmidt sculps. Brunvici. Tab I is dated 1734.

RARE. Apparently, Bytemeister had a large and extensive collection of both artificial and natural objects. This edition of the collection catalog has been enlarged and augmented with further descriptions and 28 fine plates. It is divided into two parts. The first covers the artificial or man-made objects, including instruments, tools and old coins. This portion is further separated into sections on arithmetic, geometry, optics, astronomy, economics, mechanics, hydraulics, physics, money and other curious artificial devices. The second part of the work describes the natural objects, including fossilized remains of animals and plants, minerals, stones, and crystals. At its conclusion a short text in German describes various ore specimens. Enhancing the text is a fine portrait of Bytemeister that is utilized as a frontispiece, and 28 engraved plates illustrating many of the more interesting items from the collection. Plates 1 to 8 picture the artificial items, while the remainder show the natural objects.

CALDERÓN Y ARANA, Salvador. (BORN: Madrid, Spain, 22 September 1851; DIED: Madrid, Spain, 3 July 1911) *Spanish geologist, petrologist & mineralogist.*

Calderón was professor in Las Palmas, but he was deported for political reasons. He went back to Madrid, where he founded the Institución Libre de Enseñanza. After some time spent studying in Geneva, Vienna and Munich, he went to Nicaragua, and in that country, founded in León, with others, the Instituto de Occidente. In 1883, Calderón was commissioned by the Spanish government to visit the most important natural history museums in Europe, to obtain the criteria by which the reform of the Spanish museums should be made. He was a teacher of geology in the University of Sevilla and, later, in the University of Madrid. Calderón was an expert on the geology of the Guadalajara region of Spain and the Canary Islands.

LOS MINERALES DE ESPAÑA, 1910

SCARCE. Calderón's two volume classic work, *Los Minerales de España*, is the fundamental work on Spanish mineralogy, and even today it is an essential source of information. It was the first serious modern attempt at a compilation of Spanish mineralogy, and follows Groth's classification, describing the minerals found in the Peninsula, province to province, together with information about the deposits then known or supposed.

Calderón compiled the information from his own studies about Spanish minerals, adding historical notes, new species and new deposits, because in those years, the works of the Spanish institutions related to mining and mineralogy (Escuela de Minas de Madrid, Real Sociedad Española de Historia Natural) encouraged the knowledge of the mineralogy of the country. Calderón's work influenced most of the modern works that describe the mineralogy of Spain.

CONTENTS: [1-2], Title page, verso blank.; [3], "Preface."—dated May 1888.; [4], "Chapter LX.;" [5]-93, Text.

VERY RARE. Compiled by W.F. Jackson. This is an 1888 catalog of the ores and mineral specimens recovered in California and proudly shown off in the State Mineral Cabinet located at the E.B. Crocker Art Gallery in the state capital of Sacramento. The list of a few thousand ores includes specimens containing platinum, gold, silver, mercury, copper, etc., with essentially no information other than the collection number and the locality. A hand written note on the front end page of the copy examined states "that the mineral collection has been moved to the Sacramento Junior College to be recatalogued and placed in the museum in the library building, which is being constructed." Signed by Bob Lanning and dated February 21, 1936.

CALONNE, Charles Alexandre de. (BORN: Douai, France, 1734; DIED: Paris, France?, 30 October 1802) *French statesman & controller general of finances.*

Faced with a huge public debt and a steadily deteriorating financial situation, Calonne adopted a spending policy to inspire confidence in the nations financial position. He then proposed a direct land tax and the calling of provincial assemblies to apportion it, a stamp

CALONNE

tax, and the reduction of some privileges of the nobles and clergy. To gain support, Calonne had King Louis XVI call an Assembly of Notables, but the Assembly (1787) refused to consider Calonne's proposals and criticized him bitterly. Dismissed and replaced by Étienne Charles Loménie de Brienne, Calonne fled (1787) to England, where he stayed until 1802. Many of Calonne's official papers have been published and two general works on politics have been translated into English, *Considerations on the Present and Future State of France* (1791) and *The Political State of Europe* (1796).

now exhibiting at Saville House, on the North Side of | Leicester Square, previous to the Sale thereof. | [wavy rule] | London, May 1, 1797.

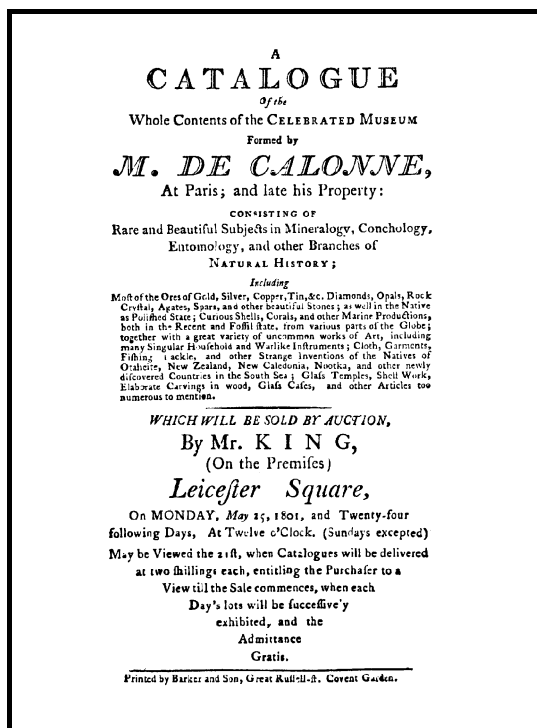

8°: viii, 84 p.

RARE. First and only part published of a proposed series describing Calonne's natural history cabinet. Prepared by the conchologist GEORGE HUMPHREY, Calonne's cabinet surely contained one of the largest and best known selection of shells in pre-Revolutionary France. This catalog is actually a pre-sale prospectus, providing detailed descriptions of 1,439 items. It is particularly rich in shell descriptions, but also contains particulars of other natural curiosities including some minerals. Being the finance minister of France, Calonne was in a position before his exile to obtain early information about the dispersal of other collector's cabinets, as well as the arrival of ships bringing home curiosities of the natural world from abroad. He had the means to pay premium prices, and in this way, Calonne built up a fine natural history collection that was world wide in scope. In fact, many of the objects were acquired by Calonne from major sales in France and England, particularly the dispersal of the cabinets of Prince Charles of Lorraine and the DUTCHESS OF PORTLAND. At Calonne's sale, many items subsequently passed into the collection of James Parkinson [see: *Organic Remains of a former World*, 3, 344]. A full sale catalog was subsequently published [which see next item] but with far less detail.

CALZOLARI

CALZOLARI, Franciscus. (BORN: Verona, Italy, 1521; DIED: Verona, Italy, 1600) *Italian pharmacist & naturalist.*

Calzolari was a pharmacist and a citizen of Verona, in which he established an extensive museum of natural history objects that became famous throughout Europe.

Francesco Calceolari was a famous pharmacist in Verona and had a marvellous natural history collection which rivalled those of Aldrovandi, Mercati or Imperato. The cabinet is described by a contemporary as follows: 'a most abundant repository and true treasure of all remarkable medicinal things, in which I observed each one placed in wonderful order in most decorative and elegant compartments and cases. First, (Calzolari) sought exceptional herbs and then the rest from their own distant places and regions, sent to him as gifts from the greatest princes and rulers...' (Daston & Park, *Wonders and the order of nature*, 1150-1750, p. 154).

Eliae Camerarii ... Dissertationes Taurinenses epistolicae, physico-medicae ... continentes annotationes in varia modernorum, Dn. de Noües cumprimis, ac Dn. Woodwardi scripta atque experimenta. Tubingæ, 1712.

8°: 376 p.

RARE. This is a collection of twenty letters, written during Camerarius' stay in Italy, while attending Prince Frederic-Louis de Württemberg, to whom he was personal doctor. Despite great scholarship and skepticism towards the work of others, Camerarius was an exceptionally credulous man who devoted himself zealously to mysticism and the secret arts, including alchemy. He opposed innovation and progress and was especially hostile to the iatrophysical methods then being developed for the treatment of disease. Among the letters published in this work is said to be one that annotates the geological theories on the origin of minerals and the earth of JOHN WOODWARD, which was reissued in some editions of Woodward's geological books.

Translated from the original text, with a preface and notes, by Kenneth V. Bordeau and Elvi Legel Bordeau. Boulder, Colo., Geological Society of America, c1980. 2 microfische. [Published as: The Geological Society of America, Inc., Microform Publication, no. 10.]

Related work: The *Erste Gründe der Berg und Salzwwerkskunde* is considered the most complete work on mining and the refining of minerals, metals and salt written in the 18th century. It was published in Frankfurt am Main from 1773 to 1791 in 12 Teilen [DSB incorrectly says 21]. This rare series is a difficult bibliographical problem. Although incomplete, the list below provides some help with paginations of the various sections.

Teil 1, 1773: [20], 272, [22] p. [Mineralogie].

Teil 2, 1773: [8], 296, [14] p. [Probierkunst].

Teil 3, 1773: [8], 72, [7] p., 3 folding plates. [Oberirdische Erdbeschreibung].

Teil 4, 1773: [8], 72, [7] p., 8 folding plates. [Unterirdische Erdbeschreibung].

Teil 5, 1774: [12], 244, [16] p., 57 folding plates. [Kurzer Entwurf der Grubenbaukunst].

Teil 6, 1775-6: 2 parts. [8], 808, [60] p.; [8], 304, xxxi, [24] p., 65 folding plates, one folding table. [Arithmetik, Geometrie und Trigonometrie].

Teil 7, 17 : 3 parts.

Teil 8, 1782: [10], 158, [8] p., 21 folding plates. [Scheide oder Aufbereitungskunst der Mineralien].

Teil 9, 1784-8: 4 parts. [12], 432, [18] p.; [2], 21 p. (=Anhang.); [10], 168, [5] p.; [12], 216, [14] p., 222 folding plates. [Gründliche Anleitung zur Schmelzkunst und Metallurgie].

Teil 10, 1788-9: 3 parts. [16], 270, [26] p.; [10], 284, [18] p.; [10], 210, [20] p., 52 folding plates, 3 folding tables. [Entwurf der Salzwwerkskunde].

Teil 11, 1790: 5 parts, [2], x, 210 p.; [2], viii, 162 p.; x, 146 p.; x, 110 p.; x, 67, [35] p. [Berg- und Salzrecht: covering mining laws of Germany].

Teil 12, 1791: 80 p., one folding table. [Abhandlung von der Anlage, dem vortheilhaftesten Bau und der Unterhaltung der Röhrbrunnen].

CANFIELD, Frederick Alexander. (BORN: 7 April 1849; DIED: Dover, New Jersey, U.S.A., 3 July 1926) *American mining engineer & mineral collector.*

Canfield grew up in an environment surrounded by minerals. His father, Frederick Canfield, had gathered together a choice selection of minerals of the Franklin zinc mines and the son preserved them in their original cases has his father had originally arranged them in 1856. Both father and son were mining men, and their home was built in the midst of the iron mines.

After the death of his father in 1865, Canfield began his own collection of minerals and continued to add to it throughout his lifetime. Early on he specialized in the minerals of New Jersey, particularly those of the more prolific localities like Franklin and the zeolites of Bergen

CANTOR

CANFIELD

Hill and Paterson. Here were contained specimens of franklinite and gahnite as sharp octahedra measuring 5 inches on the edge. Besides his unique and rich suites of local minerals, Canfield's collection became a general one and ultimately grew to between 8,000 and 9,000 specimens. These he selected with great care and they were catalogued and labeled with great accuracy. Special attention should be given to the specimens he collected in Bolivia in 1885-7, including a rough single crystal of argyrodite 6 inches across and weighing 14 lb. Canfield bequeathed his mineral collection to the SMITHSONIAN INSTITUTION together with an endowment of \$50,000 to insure its care and continued growth. There it remains intact today. Few private collections have exceeded its completeness of fine quality of the its individual specimens. As regards the suites of minerals from its native state it was unmatched, and as a primary source of material it was used extensively by Charles Palache [1869-1954] in his famous monograph of the Franklin deposit which appeared in 1935.

CONTENTS: [1-2], Title page, verso blank.; 3, "Preface."; 4-20, "Collections."—in alphabetical order by

the collector's last name.

VERY RARE. A fascinating compilation indicating the fates of many American mineral collections. Canfield, a first rate collector for his entire life, was in the habit of collecting notices about other mineral collections from newspapers, magazines and personal knowledge. Toward the end of his life, he privately published this accumulation, which in many instances is the only reference that a particular collection even existed.

Reprinted, 1990: "Final Disposition of Some American Collections of Minerals", published in *The Mineralogical Record*, 21 (1990), 39, 41-46. The complete text has been reset and included as an article.

CAPPEL, Joachim Diedrich. (BORN: Wismar, Germany, 13 February 1717; DIED: Copenhagen, Denmark, 4 February 1784) *German apothecary*.

Cappel learned the apothecary trade in Riga. He then continued his studies in St. Petersburg. Moving to Copenhagen in 1747, he opened a successful shop. In 1756 until his death he held the position of apothecary to the Königlichen Frederiks Hospitals. He built a large collection of natural history objects which was auctioned after his death. Some of the minerals were purchased by the University of Copenhagen.

PRODRONUS CRYSTALLOGRAPHIÆ, 1723

magnifying glass, Cappeller concluded that a finite set of basic crystal forms existed. These he defined as the equivalent of dendritic, polyhedral, prismatic, pyramidal, rounded, cylindrical, boytroidal and crust-like. Any stone, salt, metal or earth he examined could be classified under one of these forms. However, since the author also believed the manner of origin affected a substances' crystal shape, the same mineral theoretically might appear in more than one category. Although Cappeller misinterpreted physical form as the equivalent of crystal form, his attempt at systematic mineral description was better than any other of the period because it emphasised crystal shape as the primary distinguishing characteristic.

CARAFÀ, Giovanni, Duca di Noja. (BORN: Naples, Italy, 1715; DIED: Naples, Italy, 1768) *Italian Duke.*

In his youth, Carafa studied grammar and literature, learning how to write elegant Italian. His interests turned to scientific matters, especially mathematics. Through the use of private tutors, he advanced to the University level. In 1738, he was named a reader in optics and mathematics at the University of Naples. While there, he became interested in the natural sciences especially mineralogy, geology and botany. He began collecting in these area, creating an extraordinary garden at his Naples estate. In 1743, Carafa entered the military, and was rewarded for his valor by royal appointments to civil service positions. From 1750 to 1760, he made extensive trips throughout Europe and Russia, meeting many of the great scientists of the day.

LETTRE, 1759

1044. — French, 1759.

Lettre | Du | Duc De Noya Carafa | Sur | La Tourmaline, | A Monsieur | De Buffon. | [ornament] | A Paris, | [double rule] | M. DCC. LIX.

4°: [1]-35, [1] p., one folding plate. Ornamental head- and tail-pieces. PAGE SIZE: 240 x 190 mm.

CONTENTS: [1-2], Title page, verso blank.; [3]-35, Text.; [1 pg], Blank.

VERY RARE. In this letter to Count Buffon, Carafa provides his observations on the tourmaline, including one of the earliest written descriptions of the pyroelectricity property of the mineral. During a trip to Paris in 1759, Carafa witnessed experiments on electricity using a variety of substances including

tourmaline. By heating the mineral a weak electrical field is generated. This field manifests itself in the heated stone by attracting small bits of paper and ash to it like a magnet. On his return to Italy in September, 1759 Carafa repeated the experiments he had witnessed at the Società Colombaria in Florence, and this short monograph records the results of that demonstration in the form of a letter to Count Buffon. Aepinus thought the work of enough merit that he reprints it with commentary in his *Recueil des Differents Memoires sur la Tourmaline* (St. Petersburg, 1762).

Some libraries list this work under an author heading of Noya Carafa, Duke de, pseud. [i.e., Michel Adanson]; however this is incorrect. According to the *Dizionario Biografico Italiani*, Duke de Noya Carafa actually lived and authored this book.

CARDANO

CARDANO, Girolamo. (BORN: Pavia, Italy, 24 September 1501; DIED: Rome, Italy, 20 September 1576) *Italian physician, mathematician & astrologer.*

Cardano was educated at the University of Padua, and became a public lecturer in geometry at Milan in 1534. In 1559, he was appointed professor of medicine at Pavia and then Bologna in 1562. Cardano was arrested for heresy or debt or both in 1570. Afterwards he moved to Rome, where in 1571 he was pensioned by Pope Pius V. Cardano was a self promoter, claiming more than was true when he took credit for the cubic solution discovered by Nicolò Tartaglia. During his life, however, he authored over 100 books on mathematics, medicine, physics, philosophy, religion and music. For his mathematical innovations, "he is justly considered the originator of the theory of algebraic equations." (DSB). Cardano was also the first to write on mathematical probability.

2°: A-C⁴ D⁶ a-z⁴ aa-yy⁴ zz⁶ (D⁶ blank); 204ℓ.; [36], 371 p., woodcut arms on title, portrait of Cardano on reverse of title, woodcuts and diagrams in text. Ornamental editions, marginal annotations and illustrations. COLOPHON: Impressum Norimbergæ per Iohan. Petreium, Anno salutis M.D.L.

RARE. Cardano's famous and often reprinted work, *De Svbtilitate* [=The Subtlety] represented the most advanced presentation of physical knowledge up to its time, eclipsing the ancient works of Pliny and Albertus Magnus. It was highly influential, though not always stated, in directing scientific thought during the late Renaissance. In fact, the Italian philosopher and scholar Julius Caesar Scaliger [1484-1558] was disturbed enough by its content that he violently criticized *De Svbtilitate* in his *Exotericarvm Exercitationvm* (Paris, 1557, and later editions), which was answered by Cardano in the 1560 Basel edition of *De Svbtilitate*.

Essentially an encyclopedia, in *De Svbtilitate* one can find some article on almost every subject, including substantial sections on technology, medicine, chemistry, mathematics, various branches of the occult, mineralogy, gemology, hydrodynamics, geology, electricity, etc, and descriptions of numerous experiments and apparatus, including the pumps and the screw of Archimedes and a system of Braille writing for the blind. It is thought by some to be based on the manuscript notes of Leonardo Da Vinci; however, it is more probably the sole work of Cardano's penetrating but erratic genius. The text also incorporates many woodcut illustrations which add considerably to the descriptions.

Cardano organized his text along the same principle used in the arrangement of the writings of Aristotle, dividing the work into twenty-one long books. The first twelve deal with the physical world, beginning with the principles and elements, air, light, proceeding to inanimate objects like metals, stones, plants, then to animals, and concluding with a discussion of man. The

subsequent nine books describe the immaterial world, again in ascending order, starting with the senses, activities of the intellect and concluding with the spiritual powers, demons, angels, and finally God. The writing style is sometimes clear, sometimes torturous, and in some cases impossible to understand, which provides a rambling dialog in the descriptions.

Of concern to mineralogy are principally book 6 (metals) and book 7 (stones). Cardano shows a modified Aristotelian idea of the physical world by omitting fire and accepting only three elements: earth, air and water. Repeating the facts and fantasies of the ancients, Cardano believed bodies found with in the earth were divided into four genera: earths, juices, stones and metals. Various actions of heat on mixtures of these substances gave rise to all stones, minerals and metals. Thus, clay and minum are grouped in the earths and diamonds, onyx, marble, jasper and quartz are considered stones. The seven metals grow in the earth from seed and are thought to have life. They are also each associated with one or more planets. Cardano also attempts without much success to represent the hexagonal form of quartz by close packing of spherical particles.

Partial English transl., c1934: *The first book of Jerome Cardan's De svbtilitate translated from the original Latin, with text, introduction and commentary, by Myrtle Marguerite Cass ...* Williamsport, Penna., The Bayard Press, [c1934]. 191 p., including frontispiece., illus.

Translation by Myrtle Marguerite Cass [1908-] as part of the qualifications for a Ph.D. degree in history, from Columbia University, 1933. "The Latin text is printed as it appears in the Basel (1560) edition with ... [a few] exceptions."—Preface.

SCARCE. The French translation of Cardano's *De Subtilitate* was undertaken by Richard Le Blanc [1510?-1574?] on behalf of his patron Marguerite de France, Duchesse de Berry, the sister of Henri II, to whom it is dedicated. Oddly, she did not finance the publication, this was done instead the speculative venture was financed by four publishers, who shared the high printing costs of this densely illustrated volume. It was probably produced in the standard print run of 1,200 copies, and protected by a ten-year privilege. This first printing seems to have sold well, which explains the renewed publication in 1566, using the same plates, and another decade for the reprinting of the 1578 edition. This reprinting seems not to have been as successful, because the sheets of the 1578 were reissued with a new title page in 1584.

German Editions

1064. Translation, First edition, 1559: Offenbarung der Natur vnnd Natürlicher Dingen auch Mancherley subtiler würckungen ... Darinn künstlich die Art vnd Eigenschafft desz gantzen Vmbkreys der Welt/ beyde Himmelscher vnd elementischer Spheren angezeigt werdend/ Auch der Cometen/ desz Gestirns/ Metallen/ Gesteinen/ vnnd einflussz würckungen, mitt sampt den pflantzen/ vnnd seltsamen arten der Beümen/ Thieren vnnd Menschen ... Alles durch Heinrich Pantaleon ... verteütschet.

4°: 26 p., 1ℓ., dccccxxxiij (i.e., 1,434), [2] p. Title page vignette (portrait). Printer's device on the verso of the last leaf. COLOPHON: Getruckt zu Basel durch Heinrich Petri im Mertzen Anno Domini M.D.Lix.

SCARCE. Apparently a combined translation of both of Cardano's chief works, *De Subtilitate* (1550), in an abridged text, and *De Rervm Varietate* (1557). The translation was provided by Heinrich Pantaleon [1522-1595], professor of medicine at Basel university, and dedicated to the bishop of Basel. This was done to ensure the publication of the work of an author who was persecuted by the church and hardly printed in Italy.

RARE. The *De Rerum Varietate* [=The Diverse Facts] can be viewed as a supplement to the great encyclopedia, *De Subtilitate*. It was published by Henri Petri [see note below], who became Cardano's publisher in 1554. It contains materials which Cardano had gathered as supporting evidence to the ideas presented in the popular *De Subtilitate*, but because of space could not be included in its text. *De Rerum Varietate*, organized in 17 books, fleshes out the ideas about the natural, man-made and spiritual world presented in the 21 books of *De Subtilitate* with concrete and specific examples. Thus, the work forms a sequel to *De Subtilitate*, and, together with it, the 38 books contain Cardano's observations and ideas about many topics of nature, mankind and theology.

Henri Petri. (BORN: Nuremberg, Germany, ; DIED: 1579) *German publisher & printer.* Petri was the son of the Adam Petri [1454-1527], a successful printer in Nuremberg. He was a highly learned, shrewd and productive publisher, and it is reported that he visited the Frankfurt Book Fair more than a 100 times during his lifetime.

De Gemmis et Coloribus Liber

1072. — Latin, 1562 [First edition].

Somniorvm | Synesiorvm Omnis Gene- | ris insomnia explicantes, Li- | bri IIII. | Per | Hieronymvm Carda- | Nvm Mediolanensem Me- | dicum ac Philosophum. | Qvibus Accedunt, Eivs- | dem haec etiam: | De Libris proprijs. | De Curationibus et Praedictionibus admirandis. | Neronis encomium. | Geometriae encomium. | De uno. | Actio in Thessalicum medicum. | De secretis. | De gemmis et coloribus. | Dialogus de Morte. | Dialogus de Humanis consiliis, Tetim inscriptus. | Item ad Somniorum libros pertinentia: | De minimis et propinquis. | De Summo bono. | Cum gratia et priuilegio. Caes. Maiest. | Basileae, | Per Hen- | Ricum Petri.

2 parts in one volume. [Part 1] 4^o: α-δ⁴ ε⁶ AA-ZZ⁴ AAa-MMm⁴ (ε6, MMm⁴ blank); 161ℓ.; [42], [2] blank, 278 p. [Part 2] 4^o: α-γ⁴ δ⁶ a-z⁴ A-Z⁴ aa-ff⁴; 225ℓ.; [36], 413, [1] p. Part 2, containing the De Libris Proprijs has a special title page.

RARE. This is Cardano's extensive treatise on sleep and dreams, the most important such interpretation of the 16th century. This work is designed as an explanation of the *De Somniis* by the famous neo-platonic philosopher Synesius of Cyrenne, and was based upon the writings of Artemidorus which he developed and elaborated. The second portion of the volume contains most of Cardano's other philosophical writings, including the chapters dealing with gemstones and color. The most important of these is the *De Libris Proprijs* in defense of all his doctrines which had been attacked on the ground of heterodoxy and magical leanings. The *Encomium Geometriae* and *De Secretis* deal with physics and alchemy. The *Dialogus de Morte* relates the death of an English boy whose education

was entrusted to Cardano who felt responsible for his death. There are other dissertations on astrology and a vindication of Emperor Nero. There are some shorter tracts of biobibliographical interest.

Contents: 1 Somniorum synesiorum. 2 De libris proprijs. 3 De curationibus et praedictionibus admirandis. 4 Neronis encomium. 5 Geometriae encomium. 6 De uno. 7 Actio in Thessalicum medicum. 8 De secretis. 9 De gemmis et coloribus. 10 Dialogus Guglielmus seu de morte. 11 Dialogus Tetim seu de humanis consiliis. 12 De minimis et propinquis. 13 De summo bono.

VERY SCARCE. These are the collected writings of Cardano who was a voluminous author on a wide range of subjects. His works were collected together and published by Charles Spon [1609-1684], a French physician of German origin, in these ten large folio volumes, containing 138 treatises divided by the editor into philological, logical, moral, physical, mathematical, musical, astronomical, astrological, onirocritical, medical and fragments.

Facsimile reprint, 1967: New York, Johnson Reprint, 1967, with an introduction by August Buck [1911-] to be found in the first volume.

2 parts. [Part 1: 1781] 8°: 264 p., 6 plates. [Part 2: 1784] 8°: 298 p., illus.

VERY SCARCE. In his capacity as general manager of mines, Carosi carried out between 1778-1780 an exploration of the Southwest regions of Poland. He published the results of this, his most important work in two volumes, *Reisen durch verschiedene polnische Provinzen mineralischen und anderen Inhalts* (Leipzig 1781-1784). One of the goals of this expedition was to locate a source or sources for mining salt. The saltworks of Wieliczka and Bochnia had been lost to Austria and the state required a new saltworks which could replace it. Carosi also provides invaluable information on the copper, iron, and black lead deposits that he had visited. He also gives some information on mines of the adjacent regions of Kielce and Chęciny. Carosi also gives a lists of minerals collected, which he thoroughly describes according to the "method of Werner".

CARTHEUSER, Friedrich August. (BORN: Halle, Germany, 1734; DIED: Schierstein, Germany, 12 December 1796) *German geologist & mineralogist.*

Son of the German physician and apothecary, Johann Freidrich Cartheuser [1704-1777], Friedrich August was trained in the medical profession, but devoted himself to natural history and especially mineralogy and geology. Between 1754-66, he was a Docent in mineralogy, botany and chemistry at the University of Frankfurt an der Oder. Then he was named professor of natural studies at the University of Giessen. He became an advisor on mining and geological matters to the government.

Doct. | [ornament] | [ornate rule] | Francofurti | Ad Viadrum. | Impensis Pauli Sigismundi Gaebler, | An. c1515C LV.

8°: [16], 104 p.

RARE. This work describes the basis of Cartheuser's system of classification in mineralogy. It was innovative for its time in separating the petrifications and figured stones into a separate class of object away from true minerals. The system described contained the seven principle divisions of (1) Terræ, which separated those substances that could be dissolved in water and those that could not, (2) Lapides, (3) Salia, including alkali and acid, (4) Inflammabilia, (5) Semimetalla, (6) Metalla, and (7) Heteromorpha, containing petrifications, fossils and figured stones.

8°: [12], 78, [6] p.

RARE. *Rvdimenta Oryctographiæ Viadrino – Francofvrtanae* presents an account of the minerals to be found in the area surrounding Frankfurt-an-der-Oder in Germany. The author was an avid mineralogist, and spent much time wondering the district in search of mineralogical wonders, which he describes within this volume.

Impresso en Trigueros, por Diego Perez Estupiñan.
4°: 224ℓ.

VERY RARE. Castrillo, a Jesuit, first wrote this work in 1636. He discusses astrology, physiognomy, and natural magic. He adds a section on earthly questions—the location of the terrestrial paradise, whether there are springs on the highest mountains, herbs, metals, and stones, and other natural phenomena. “It would appear that there is more nature than magic in Castrillo’s book ... But he might answer that natural magic is more concerned with nature than other sciences are” (Thorndike).

8°: [1]-55, [1] p.

RARE. A sale catalog describing a rich collection of natural history and manmade objects. Included in the selections are preserved specimens of fish, reptiles and small animals, a large selection of shells, fossils, agates, stalactites, crystallizations, various examples of decorative marble, bronzes from India and Egypt,

weapons, etc. Although the title only attributes the collection to a M. D***, Dezallier d'Argenville in a contemporary list of the shell collectors published in his *Conchyliologie*, 3rd édition (Paris, 1767, p. 321), lists in the town of Rouen a collector by the name of De La Fosse, and there is some indication that this is the sale catalog of his collection.

CATULLO

CATULLO, Tommaso Antonio. (BORN: Belluno, Italy, July 9 1782; DIED: Padua, Italy, 13 April 1869) *Italian physician, naturalist & mineralogist.*

Trained in the medical profession, Catullo was appointed in 1811 an instructor of natural history and chemistry at Belluno, followed in 1815 at Verona and in 1822 at Venice. Soon thereafter, he was appointed a professor in the same subjects at the University of Padua. He held membership in the Società Italiana.

VERY SCARCE. After the introduction which
contains general explanations of the formation,
association, occurrence, alteration, decomposition, and
distribution of minerals, the author proposes his
own system of mineral classification based on Haüy.
Each mineral arranged in the system has expansive
notes describing the usual chemical and physical
characteristics, localities, and uses in medicine. A
table of contents and an index to the mineral species
mentioned in the text concludes the work.

CAVALLO

CAVALLO, Tiberius. (BORN: Naples, Italy, 30 March
1749; DIED: London, England, 21 December 1809)
Italian physicist & acoustic expert.

Cavallo emigrated to England in 1771, where he
became generally interested in the science of physics, but
became particularly interested in the study of electrical
phenomena. Cavallo's studies in this field culminated in the
publication of his most important work, *A Complete Treatise
on Electricity in Theory and Practice* (1st ed., London,
1777). He also published many other works on physical
phenomena, including magnetism, fluid and gas mechanics,
and musical sounds. Cavallo was elected a Fellow of the
Royal Society in 1779.

Il Fosforo | O' Vero La | Pietra Bolognese | Preparata per rilucere frà | l'ombre. | Fatica Di | Marc' Antonio Cellio | Dell'Accademia Fisicomatte- | matica di Roma, | E dal medemo consecrata | All'Eccellentissimo Principe | Signor D. | Marc' Antonio | Borghese. | [ornament] | In Roma, Per il Vannacci. 1680. | [rule] | Con Licenza de'Superiori.

12°: A-D¹² E³; 51 ℓ .; [1]-102 p. Ornamental initials.

VERY RARE. The first work written in Italian on the phosphorescent barite found near Bologna and then called the 'Bolognian stone'. Here, Cellio describes the location where the Bolognian stone could be found, chiefly on Monte Paterno, indicating that a typical size is that of an orange. He notes that the color varies, but he says the white ones are the most phosphorescence sensitive.

CENTRALBLATT FÜR MINERALOGIE.

1106. — German, 1900 [Periodical].

Centralblatt | für | Mineralogie, Geologie und Palaeontologie | in Verbindung mit dem | Neuen Jahrbuch für Mineralogie, Geologie und Palaeontologie, | herausgegeben von | M. Bauer, E. Koken, Th. Liebisch | in Marburg. in Tübingen. in Göttingen. | [rule] | Jahrgang 1900. | Mit zwei Portraits und mehreren Figuren. | [ornament] | Stuttgart. | E. Schweizerbart'sche Verlagshandlung (E. Nägele). | 1900.

Vol. 1 (1900)-Vol. 25 (1924). In 1925 it was continued as *Abteil A: Mineralogie und Petrographie*.

VERY SCARCE. First edited by MAX BAUER, Ernst Koken [1860-], and THEODOR LIEBISCH, this major periodical founded at the beginning of the 20th century, contains many important original articles, announcements of recent discoveries, reviews of books, obituaries, abstracts, and other notices of mineralogical, geological and palaeontological science. Its monthly issues were issued to compliment the *Neues Jahrbuch für Mineralogie* that was published in biannual issues. In 1925 it was continued as *Abteil A: Mineralogie und Petrographie* of the *Neues Jahrbuch für Mineralogie*.

2^o: [50], 746 [i.e., 748] p., engraved title page, folding engraved plate of the museum's interior, 43 engraved plates in the text (8 of which are full-page).
COLOPHON: Veronæ, Apud Angelus Tamus, 1622.

PLATES: The fine plates were designed by the Verona artist J.B. Bertonus and engraved by the goldsmith and engraver Hieronymus Viscardus.

RARE. Co-authored with Andrea Chiocco [see note below]. FRANCESCO CALZOLARI, a wealthy Veronese pharmacist, created toward the end of the 16th century, one of the earliest natural history collections, both competing and collaborating with his colleagues and rival collectors ULISSE ALDROVANDI in Bologna and MICHELE MERCATI in Rome. Calzolari's collection was first described in 1584 by GIOVANNI BATTISTA OLIVA of Cremona, but it was his grandson, Francesco junior, who inherited the accumulation, and added to it, that history is indebted to for this authoritative account of the collection. It was the heir that hired the two physicians, Ceruti and Chiocco to catalog the museum.

Francesco Calzolari senior was a native of Verona. After studying under the naturalist Luca Ghini [1500–1556], he went on to the University of Padua where he learned the preparation of pharmaceutical prescriptions using various plant, animal, and mineral substances. He was an excellent student, and eventually left school to open in the main square of Verona his own shop, called “The Golden Bell.”

In order to stock his shop with raw materials, Calzolari would walk the mountains and valleys of the surrounding area in order to collect plants, minerals and animals. Soon he was driven by a fascination with natural history, and he worked through dealers and travellers to acquire all sorts of herbs, fruits, animals, birds, minerals and fossils from throughout Europe and Asia Minor. These specimens he added to a growing collection displayed in a special room at the rear of his pharmaceutical shop. Contemporary accounts indicate that each specimen was accompanied by a detailed label. As the nature of Calzolari's museum became

known, a steady stream of physicians, naturalists, friends, and curiosity seekers began to visit. Eventually the fame of “The Golden Bell” spread throughout Europe, and it became a site to visit when travelling through Verona.

Ceruto and Chiocco's catalog preserve a record of the museum at its height. The exhibit room is beautifully illustrated in the folding frontispiece. It shows a room lined with nicely crafted open shelves above a series of drawers at waist level. Underneath the drawers are stored various urns and vases, while stuffed birds rest on top of the shelves. From the ceiling are hung numerous preserved animals, including snakes, fish, lizards, a porcupine, and apparently a human head(!). Many items that were typical fare of ‘Wunderkammer’ of the period are present in Calzolari's museum. The strength of the collection lay in the numerous botanical and mineralogical specimens, some of which are illustrated on the finely engraved plates. Within the section on minerals and fossils is the first publication of Girolamo Fracastoro's [1483–1553] idea proposed in 1517 that fossils originated from once living animals. There creation being caused by the changing positions of land and sea. The catalog ends with a description of the library and gallery of paintings of famous doctors, botanists, philosophers, and mathematicians. In the 1640's the collection was sold off, part going to a Veronese pharmacist named Mario Sala, and part being acquired by LODOVICO MOSCARDO and incorporated into his own large collection.

The museum was divided into several sections: (1) corals, (2) clays and earths, (3) crystal-lined geodes, amethyst, fluorite, diamond, opal, cat's-eye, emerald, topaz, malachite, jasper, beryl, sapphire, lapis lazuli, turquoise, ruby, garnet, chalcedony, sardonyx, carnelian, agate, magnetite, hematite, dolomite, gypsum, and some fossils, (4) gold, silver, cinnabar, copper, and iron minerals, antimony minerals, coal, talc, alum, cassiterite and others, (5) the herbarium, and (6) preserved animals, birds and snakes, including a supposed horn of a unicorn.

Andrea Chiocco. (BORN: c1562; DIED: 3 April 1624) *Italian pharmacist.*

CESALPINO

CESALPINO, Andrea. (BORN: Tuscany, Italy, 6 June 1519; DIED: Rome, Italy, 23 February 1603) *Italian physician.*

Cesalpino was physician to Pope Clement VIII. He made original contributions to the fields of physiology, botany, geology and chemistry, and his theory on the circulation of the blood anticipated William Harvey's [1578-1657] in important ways. Cesalpino's *De Plantis* (Florentiae, 1583) laid out principles of arrangement and classification of botany that were developed through Joachim Jung and John Ray into the system designed by Linnaeus.

4°: a-b⁴ A-Z⁴ 2A-2E⁴; 120ℓ.; [16], 1-222, [2] p., engraved arms of Pope Clement VIII on title page. Mispaginations: 445 for 145, 447 for 147, 181 for 177, 184 for 180, 177 for 181 & 180 for 184. PAGE SIZE: 215 x 151 mm.

CONTENTS: [2 pgs], Title page, verso blank.; [3 pgs], Dedication.; [1 pg], "Perlegi hoc opus de Metallis ..."; [9 pgs], Index.; [1 pg], Blank.; 1-222, Text.; [1 pg], Colophon: "... Romae, | Ex Typographia Aloysij Zannetti. MD. XCVI. | Svpriorvm Permissv."; [1 pg], Blank.

RARE. Cesalpino's last work, dedicated to his major patron, Pope Clement VII. It is a famous compendium on metals and minerals by a remarkable Renaissance scientist celebrated for achievements in several branches of science. It was written as a companion to the author's famous botanical work, *De Plantis* (Florentiae, 1583), and was intended to extend his visionary theory of botanical classification to the mineral kingdom. In addition, at the end of the 16th century, MICHELE MERCATI had begun to classify and catalog the metallic specimens held in the Vatican's mineralogical collection, but died before the manuscript was published. Cesalpino had been Mercati's teacher, and after the later's premature death, succeeded him as papal physician in Rome where he researched the *De Metallicis*. Cesalpino intended his treatise to supplement Mercati's work by not only describing

metals but also focusing on the papal collection of gems and marbles.

Cesalpino divides his work into 3 major sections. Book I deals with the genesis of minerals and sketches a theory of classification according to their admixtures of the four elements. Book II treats limestone, marble, precious stones, crystals and salts, and the processes by which crystallization gives minerals their regular form, while Book III is devoted to metals and mining. Throughout the author provides commentary from ancient and contemporary sources, together with his own insightful observations.

De Metallicis is an important book for giving an early recognition to the true organic nature of fossils, the phenomenon of crystallization, speculating on the existence of oxygen and observing that gases have weight. In addition, along with GEORG AGRICOLA's *De Re Metallica* (1st ed., Basel, 1556), this work provided scholarly background for William Gilbert's *De Magnete* (1st ed., London, 1600). A whole chapter is devoted to the magnet, and there is material on the increase of weight on the calcination of lead, which foreshadowed the famous experiments on oxidation in the 18th century.

De Metallicis is also of interest, however, as a compendium of fantastic lore culled from ancient and contemporary sources: "Not only do we hear of a lynx stone near Naples that bears mushrooms, which Cesalpino regards as a great marvel but which may be a fact, but we have the gem jasper suspended as an amulet or are regaled with the virtues of bezaar or bezoar stones. One from Persia that grows in goats is tested in this wise. They smear a thread with poison such as the juice of a white hellebore and draw it with a needle through the foot of a dog or other part of an animal, leaving the thread in the wound. When symptoms of poisoning aggravate, they bring the stone near, and if it is genuine, the animal feels relief from that remedy ... " (Thorndike).

CESÀRO, Giuseppe Raimondo Pio. (BORN: Naples, Italy, 6 September 1849; DIED: Liège, Belgium, 20 January 1939) *Italian mineralogist & crystallographer.*

Cesàro was the brother of the distinguished mathematician Ernesto (??-??). Although he began by studying engineering, Cesàro early abandoned this field, and began to search for his true vocation. Ultimately he discovered mineralogy, and it was the pursuit of this science that became his profession. He eventually found an appointment in Belgium where he worked as assistant to the mineralogist Gustav Dewalque [q.v.] at the University of Liège. Upon Dewalque's retirement in 1891, Cesàro was appointed professor of mineralogy and crystallography. In 1919, he was nominated as director of the mineralogical museum in Liège. Among his publications, Cesàro authored many papers usually published in the journals of various Belgium Scientific Societies centered around describing the minerals of Vesuvius, Italy and Belgium, as well as the forms of calcite.

CESI

CESI, Bernardo (Federico). (BORN: Mantua, Italy, 1581; DIED: Modena, Italy, 4 September 1630) *Italian Jesuit & naturalist.*

Cesi was professor of philosophy, theology and morals first at the University of Parma, then later at Modena. He died during an outbreak of the plague. He may have been related to an illustrious and powerful Italian family of the time. They had several members rise to the highest ranks of the Catholic church during the 16th and 17th centuries.

VERY SCARCE. Compendium of all the author ever discovered or read about the subject of mineralogy. It was published posthumously from notes he left by his Order at Lyon six years after his death. Printed in a double column format in a relatively small type-size, the work is a vast storehouse of all things mineralogical, including new ideas, restatements of earlier authors, observations and superstitious belief. The uncritical selection of material lead Webster in his *Metallographia* (London, 1671, p. 29) to criticize the author as too digressive and as mixing tares with the wheat. Partington thinks the use of the term "Mineralogia" in the title is the first modern usage of the word.

The work opens by listing the evils and benefits of mineralogy. Mining is considered dangerous because of the lurking underground spirits. Mining also destroys fields and forests. So asks Cesi, why destroy mother Earth? The evil consequences from riches, iron weapons and especially gold are described, with much poetical quotation in the case of gold and silver. However, the author notes that the study of mineralogy helps one to understand the bible. It provides medicines and

money, ornaments for religious purposes, tools used in agriculture, industry, painting, music and alchemy. Cesi then answers the question he posed earlier and declares mineralogy to be a true philosophy, worthy of careful study.

The numerous citations to earlier authors provide evidence of Cesi's wide reading. Commonly, many authors are referenced on single points. For example, in describing the generation of minerals he closely follows Aristotle but also cites Theophrastus, Avicenna, Albertus Magnus, Agricola, Gregorius Reisch, Pliny, Boodt, Francis Rueus, Marbode, the Bible, and numerous church fathers. The author is uncritical of the views he presents, and accepts the authority of the ancient and medieval authors as his own. He believes that the Sun, Moon and stars influence the subterranean world of minerals and metals, and that gems have miraculous curative powers. He includes a chapter on the magnet, and although widely read, omits to mention Gilbert's *De Magnete* published in 1600. As one progresses throughout the volume, citations to references become less frequent, perhaps indicating the author was still preparing the manuscript when death unexpectedly occurred.

Cesi divides his work into five sections: the first, treats mineralogy proper, the second the economic and commercial aspects, for example colors and pigments, the third, lapidifying juices of the earth that congeal into minerals, the fourth gems and the fifth metals. At the conclusion is a long and thankfully comprehensive index. Much insight about ancient philosophy and its affect in the 17th century can be gained from studying Cesi's *Mineralogia* but one must sift through a large amount of superfluous information to reach those gems.

CHAMBON, Joseph. (BORN: Grignon, Provence, France, 1647; DIED: Grignon, Provence, France, c1732) *French physician.*

Chambon was a physician on the faculty at Aignon. Later he opened a practice in Marseilles, but traveled to Poland to become physician to King Sobiesky. He remained until the siege of Vienna, when he returned to France by way of Holland and England. Chambon retired to Grignon, where he lived with a brother.

Traité | des | Metaux, | et | des Mineraux, | Et des Remedes qu'on en peut tirer; | Avec | Des Dissertations sur le Sel & le Soulfhre | des

CHAPMAN

Philosophes, & sur la Goute, la Gra- | velle, la
petite Vérole, la Rougeole & | autres Maladies:
avec un grand nombre de | Remedes choisis. | Par
M. Chambon, cy-devant premier | Médecin de Jean
Sobieski, Roy de Pologne. | [ornament] | A Paris,
Quay des Augustins, | Chez Claude Jombert, vis-
à-vis la Descente | du Pont-neuf, à l'Image Nostre
Dame. | [rule] | M. DCC. XIV. | Avec Approbation,
& Privilege du Roy.

12°: a⁸ ã⁴ i⁸ ð² A-Z^{8/4} Aa-Zz^{8/4}; 298ℓ.; [44], [1]-
547, [5] p. Headpieces, initials. Preliminary matter
includes several letters praising the medical remedies.

CONTENTS: [2 pgs], Half title page, "Suite | des |
Principes | de Physique, | Rapportés à la Médecine
pratique," verso blank.; [2 pgs], Title page, verso blank.;
[6 pgs], Dedication.; [16 pgs], Preface.; [18 pgs], Letters of
appreciation for Chambon's work.; [1 pg], Approbation.;
[1 pg], "Cession du Privilege."; [1]-547, Text.; [5 pgs],
"Table des Matieres."

VERY SCARCE. Chambon's text deals with the
medical uses of mineral substances, especially the
preparation of remedies. Information on the properties
and uses of minerals, other than medical, of many
substances like borax, alum, nitre, coffee, chocolate,
tea, tobacco, teeth, etc. are also discussed. A chapter
on gout and remedies to help reduce the inflammation
is also included.

Other issues & editions: Based on entries in other
bibliographies, the original text appears to have been
reissued several times. However, existence of some of these
books has not been confirmed. The *Wellcome Catalogue*, (2,
p. 324) lists an issue: Paris, C. Jombert 1750 (10 [11?]ll.,
547 p., 2ll.). A reported "Second Edition" of 1780 with
reportedly the same pagination as the 1714 appearance
is also likely to be a reprint, but no actual copy of this
edition has been located. Nicolas Gobet in his *Les Anciens
Minéralogistes du Royaume de France* (Paris, 1779) reprints
parts of Chambon's text.

CHAPMAN, Edward John. (BORN: Kent, England,
1821; DIED: Hampton Wick, near London, England, 28
January 1904) *English and Canadian mineralogist &
geologist*.

Chapman was educated in civil engineering in France
and Germany. He received a Ph.D. from Göttingen in
1862 and an LL.D. from Queen's University, Kingston
in 1867. He was professor of mineralogy in University
College, London from 1850 to 1853. In 1853 he went to
Canada to become the first professor of mineralogy and
geology at University College, Toronto. He held that post
until 1898 when he retired and subsequently returned to
England. From 1883, Chapman was a charter member of
the Royal Society of Canada. Besides many books and
papers concerned with geology and mineralogy, he also
authored a volume of poetry, *A Song of Charity* (1st ed.,
Toronto, 1857; 2nd ed., London, 1858).

PRACTICAL MINERALOGY, 1843

1117. — English, 1843.

Practical Mineralogy; | Or, | A Compendium |

Of The | Distinguishing Characters Of Minerals. | By Which The Name Of Any Species Or Variety In The Mineral | Kingdom May Be Speedily Ascertained. | [rule] | By Edward J. Chapman. | [rule] | Illustrated With Thirteen Engravings, Showing Two Hundred | And Seventy Specimens. | [rule] | London: Hippolyte Bailliere, Publisher, | 219 Regent Street. | Paris: J.B. Bailliere, Libraire, Rue De L'Ecole De | Medicine. | Leipsig: T.O. Weigel. | [rule] | 1843.

4°: [i]-xvi, [2], [1]-192 p., 13 plates, [1]-41, [1] p. The 13 unnumbered plates all show crystal diagrams. PAGE SIZE: 225 x 140 mm.

CONTENTS: [i-ii], Title page, verso "London: | Printed By Charles Reynell, | Little Putteney Street."; iii, Dedication to Berzelius.; [iv], Blank.; [v]-xii, "Preface."—dated 5 September 1843.; xiii-xvi, "Contents."; [1 pg], "Postscript."; [1 pg], "Errata."; [1]-171, Text.; [172], Blank.; 173-192, "Index."; [13 plates].; [1]-41, Publisher's list.; [1 pg], Blank.

VERY RARE. This uncommon textbook is a manual of mineralogy designed for practical field work, and it is aimed towards students, prospectors and mine operators so that they might determine through field analysis the name of an unknown mineral. The text is divided into three major chapters: I. The distinctive characters of minerals. II. An artificial arrangement of simple minerals based on chemical and blowpipe characteristics (i.e. a combination of the classification systems of Mohs, Beudant and Berzelius). III. A natural arrangement of simple minerals. At the conclusion is a long index that was written to form a complete table of synonyms for all English, German, and French authors.

1122. — English, 1864 [First edition].

A Popular and Practical Exposition of the Minerals and Geology of Canada. Toronto, W.C. Chewett, 1864.

8°: xii, 236 p., 253 illus., including maps.

VERY SCARCE. A popular and practical exposition of the minerals and geology of Canada with over 250 woodcuts and a copious index. The majority of the work first appeared as a series of articles in the *Canadian Journal of Science and Art*, which presents a popular and full sketch of the mineralogy and geology of Canada. Introductory matter pertaining to both of these sciences render it a good handbook to the science as well. It provides in detail the general results of the Geological Survey of Canada, as it appeared in the published reports, together with additional data supplied by Chapman's own research.

Mineral Systems | A Review | With Outline Of

An Attempted | Classification Of Minerals | In Natural Groups | By | E.J. Chapman, Ph.D. | [...2 lines of titles and memberships...] | London | Williams And Norgate | 14, Henrietta Street, Covent Garden | 1904.

8°: [10], 144 p. Includes index.

VERY SCARCE. Apart from certain questions bearing more or less directly on the subject, the present Essay concerns itself entirely with the Classification of Minerals. It is not intended to serve in any way as an introduction to the actual study of Mineralogy: nor, indeed, can its argument be properly understood except by those who have already some knowledge of the subject to which it refers. It is published as a protest against the system of classification now so greatly in vogue, by which Mineralogy is practically dethroned as a natural science; and secondly, in the hope that it may induce some of our younger workers in this field of research to develop, sooner or later, a truly natural system that may be acceptable to all. The writer's own day has gone by for this. The inevitable "Thus far and no farther" that awaits the coming years of all, is, in his case wellnigh reached. In his discussion of past and present classifications, he is constrained, it will be seen, to differ somewhat widely from the views and opinions of others: but, in contesting these views, he has striven to do so without undue discourtesy. — *Preface*.

Contents: I. A Brief Review of the More Important Mineral Systems. II. Classification Characters in Mineralogy. Appendix A. Synopsis of a Proposed Distribution of Minerals in Consecutive Natural Groups. Appendix B. Characteristic Blowpipe Reactions. Index.

VERY SCARCE. *Onomasticon Zoicon*, the title of this important and celebrated natural history classic means a dictionary of living things. It is a work of natural taxonomy, and Charleton gives the English, Latin and Greek names of all manner of natural things. It is the first English book to provide illustrations of the English birds it describes. In addition to listings of quadrupeds, insects, birds and fish, the text includes in the third and final section an early and important list of fossils.

In Charleton's time, fossil referred to anything dug from the earth, and consequently many of the

descriptions are of minerals and precious stones. Among those fossils listed are fossilized fish and shells, agate, chalcedony, sardonyx, diamond, bezoar stone, carbuncle, garnet, sapphire, emerald, gold, silver, copper, tin, iron. Under a heading of mixed metals mention is made of galena, pyrite, chrysocholla, minum, and various lead spars.

1133. 2nd edition, 1677: *Gualteri Charletoni | Exercitationes | De | Differentiis & Nominibus Animalium. | Quibus accedunt | Mantissa Anatomica, | Et quaedam | De variis Fossilium generibus, | Deque differentiis & nominibus Colorum. | Editione secunda, duplo, fere auctior priori, novisque iconibus ornata. | [Large ornamental rectangular scene] | Oxoniae, | E Theatro Sheldoniano, An. Dom. 1677.*

3 parts (bound in 1 volume). [Part 1] 2^o: a-e², A-Gg²; 70l.; [20], [1]-119, [1] p., large engraved title-vignette, 3 engraved plates. [Part 2] 2^o: a*-dd*²; 53l.; [1]-106 p., with 3 engraved plates and 5 engraved figures in the text. [Part 3] 2^o: Aa-Aaa²; 50l.; [2], [1]-78, [20] p. PAGE SIZE: 220 x 355 mm.

CONTENTS: [Part 1] [2 pgs], Title page, verso blank; [6 pgs], Dedication; [11 pgs], "Praefatio."—dated M DC LXVII [=1677]; [1 pg], Two quotations in Greek; 1-31, Text of animals; 32-35, Text of snakes; 36-63, Text of insects; 64-119, Text of birds; [1 pg], Blank.

[Part 2] 1-67, Text of fishes; 68-69, Text of zoophyta; [70], Blank; 71-106, Text of Mantissa Anatomica.

[Part 3] [1 pg], Sectional title page, "De Variis | Fossilium | Generibus."; [1 pg], Blank; 1-78, Text of fossils; [3 pgs], "Addenda."; [1 pg], Blank; [15 pgs], "Index."; [1 pg], Blank.

VERY SCARCE. Second edition, substantially enlarged, with much of the work new and in every part improved and additionally illustrated. The change to the larger folio size from the quarto of the 1668 edition provided more descriptive space for Charleton and he makes good use of it. This is a truly splendid volume. The text flows along the lines of the earlier edition, but with the addition of an appendix, 'Colorum Differentiis et Nominibus.' This remarkable section which only appears in this edition, classifies various shades of colors by their English and Latin names. For example, there are 11 shades of white, 18 of yellow and 16 of red.

PLATES: Plates and map are as follows: Frontispiece showing Greek(?) gods. Folding colored map of the "Kupferstich." (376 x 550 mm.) 1. Underground mining scene. 2. Underground mining scene. 3. Saxony topaz locality (north view). 4. [same] (south view). 5. [same] (another view). 6. [same] (another view).

VERY SCARCE. A classic text in the early geological literature of Germany. The *Mineralogische Geographie* gives an excellent description of the veins and other mineral occurrences of Saxony and some of the adjacent areas, and in the last few pages of the book the question of the probable origin of the ores is discussed. It is an admirable presentation of the facts gathered during the author's long years of mining experience. He considers in succession those facts which have a definite bearing on the question of the genesis of the ore deposits, and, based on them, he offers an explanation of their origin, which, he says, cannot be considered as more than a conjecture but which he believes represents the closest approximation to the truth attainable at that time.

Next to G. Gläser and the map that appeared in his *Versuch einer mineralogischen Beschreibung* (1775) the map of Saxony in Charpentier's book is the earliest colored geological map of Germany. He uses eight tints to distinguish granite, gneiss, schist, limestone, gypsum, sandstone, river sand, clay and loam. He uses symbols to show the location of basalt, serpentine, etc.

CHENEVIX

CHENEVIX, Richard. (BORN: Ballycommon, near Dublin, Ireland, 1774; DIED: Paris, France, 5 April 1830) *Irish chemist & mineralogist.*

Of Huguenot ancestry, Chenevix was educated at the University of Glasgow. Soon thereafter, in 1801, he published an analysis of a new variety of lead ore [=anglesite] and of various arsenates of copper. The publication of *Remarks upon Chemical Nomenclature, According to the Principles of the French Neologists* (London, 1802) built him a reputation as an expert in the field. In this same time, he also built a reputation for viciously attacking the German school of Naturphilosophie, which won him some enemies. In 1803, an anonymous handbill was circulated among British scientists. It announced the discovery of a new chemical element called palladium. Chenevix, believing the substance to be a complex alloy purchased the entire stock and began experimenting. Subsequently, he reported to the Royal Society that palladium was simply a mixture of platinum and mercury. Soon after, Wollaston announced himself the author of the handbill and discoverer of two new elements, palladium and rhodium. After it was shown that these were infact new elements, Chenevix's reputation was badly damaged. Subsequently, he emigrated to France, where he became a disciple of Haüy. In later years, Chenevix wrote several novels, plays, and books of poems. He was a Fellow of the Royal Society of London.

OBSERVATIONS, 1811

1139. — English, 1811.

Observations | On | Mineralogical Systems. | By Richard Chenevix, ESQ. F.R.S. &c. | Translated From The French, | By A Member Of The Geological Society. | [double rule] | To Which Are Now Added, | Remarks | By Mr. Chenevix | On | The Reply Of M. D'Aubuisson | To The Above | Observations. | [double rule] | London: | Printed For J. Johnson And Co. | St. Paul's Church-Yard. | 1811.

8°: π^4 B-K⁴ L²; 74 ℓ .; [i]-viii, [1]-138, [2] p. PAGE SIZE: 230 x 140 mm.

CONTENTS: [i-ii], Half title page, "Observations | On | Mineralogical Systems," verso "Printed by C. Wood, | Poppin's Court, Fleet Street, London."; [iii-iv], Title page, verso blank. [v]-viii, "Advertisement | Of The Translator."; 1-124, Text.; [125]-138, "Remarks | upon an | Answer of M.^r D'Aubuisson | To The | Preceding

Observations."; [1 pg], "Printed by C. Wood, | Poppin's Court, Fleet Street, London."; [1 pg], Blank.

VERY SCARCE. First separate edition. Originally published as "Suite des Réflexions sur quelques méthodes minéralogiques," in the *Annales de Chemie* [see: **65** (1808), pp. 225-276], when Chenevix returned to England he was asked to prepare a translation. He declined, but offered assistance to anyone that would be willing to pursue the work. A member of the Geological Society [who??] took up the challenge, and work on the translation began. However, about the time the manuscript was ready for the press, another translation began appearing in serialized form in the *Philosophical Magazine* [see: ?? (18??) pp. ???-???]. This almost derailed the publication of the *Observations*, but it was decided that the other translation was inadequate, and so publication proceeded, although it would appear that not many copies were printed.

The text takes the form of a point/counter-point discussion of the merits between the mineralogical theories of Haüy and Werner. Although purporting to be objective in its discussion, Chenevix is prejudiced to the Haüyian view of mineralogy. An additional section has been included where Chenevix rebuts the criticisms of D'Aubuisson, a Werner disciple, against the original article.

CHESTER, Albert Huntington. (BORN: Saratoga Springs, New York, U.S.A., 22 November 1843; DIED: New Brunswick, New Jersey, U.S.A., 13 April 1903) *American mineralogist & chemist.*

Chester studied at Union College before entering the Columbia School of Mines from which he graduated in 1868. Upon the recommendation of T. Egleston, he was appointed professor of chemistry, mineralogy and metallurgy at Hamilton College, New York, where he remained from 1870 to 1890. Chester then took a position as professor of chemistry and mineralogy at Rutgers College in 1891, where he remained until his death.

Professor of Mineralogy in Rutgers College | First Edition | First Thousand | New York: | John Wiley & Sons. | London: Chapman & Hall, Limited. | 1896.

8°: [i]-xxxviii, [1]-320, [2], 1-16 p. PAGE SIZE: 220 x 148 mm.

CONTENTS: [i-ii], Half title page, verso blank.; [iii-iv], Title page, verso copyright notice.; [v], Dedication to Edward North.; [vi], Blank.; vii-xv, "Introduction."—signed Albert H. Chester, 1 January 1896.; xvi-xvii, "Correspondents."; [xviii], Blank.; xix-xxxvii, "Abbreviated And Full Titles Of The Works Cited."; xxxviii, "Abbreviations."; [1]-296, Text.; [297]-320, "Index To The Authors Of Mineral Names."; [2 pages], Blank.; 1-16, "Short Catalogue Of The Publications Of John Wiley."

SCARCE. A valuable compilation to the history of mineralogical nomenclature. Besides describing the difficulties in compiling a work of this type, Chester in the introduction provides a highly interesting essay on the history of mineralogical names. The long lists of correspondents and cited references reflect the careful, patient labor the author exercised in compiling this book, the most comprehensive history of the names of minerals ever published. The text lists in an alphabetical sequence nearly five thousand names that have been applied to minerals. Included are minerals still considered actual species, as well as those that are varieties or that have through history become discredited or had the priority for their name, given to another researcher. All except about one hundred and fifty entries contain a complete reference to the original authority and a derivation of the the names meaning. At the conclusion of the text there is a very useful index to the various mineralogists that have named minerals contained within the body.

CHIARUGI

CHIARUGI, Vincenzo. (BORN: Empoli, Italy, 20 February 1759; DIED: Florence, Italy, 20 December 1820) *Italian physician & dermatologist.*

Chiarugi received his medical degree from the University of Pisa in 1780. He practiced medicine in Florence, becoming the personal physician to Achispedoli of St. Maria Nuova. In 1785, he was appointed director of a new mental hospital recently built in Florence. He was named professor of skin and mental diseases of Santa Maria Nuova in 1802, becoming superintendent in 1818. Chiarugi is considered the father of Italian clinical psychiatry. He was the first in Europe to stop using chains and fetters in treating the insane, instead developing new methods and reforming the old methods.

SISTEMA DI MINERALOGIA, 1780

1144. — Italian, 1780.

Sistema | Di | Mineralogia | Compilato
Recentemente | Per Uso | Dei Moderne Gabinetti
| Di Storia Naturale. | [ornament] | In Firenze
MDCCLXXX. | [ornate rule] | Nella Stamperia
Allerini Alla Croce Rossa | Con Approvazione.

16°: vi, 62 p.

RARE. Although this title was published anonymously, it is generally attributed to be the work of Chiarugi. It is a treatise of mineralogical classification designed for use by the late eighteenth century collector of minerals. The text is based upon the natural history method, then prevailing throughout the science, and

consists of a synopsis of the classification scheme. From the text it is inferred that the author had classified his own mineral collection according to the outlined method.

CHILDREY, Joshua. (BORN: Rochester, Kent, England, 1623; DIED: Upwey, Dorsetshire, England, 26 August 1670) *English naturalist*.

Childrey graduated from Oxford University; Magdalen College, B.A., 1646. Childrey was expelled by the Parliamentary Visitors in 1648. M.A., 1661; D.D., 1661. Both of these degrees were mandated upon the Restoration. Childrey's first books were on astrology: *Imago astrologica*, 1652, and *Syzygiasticon instauratum*, 1653. In attempting to elaborate an experimental astrology, he confirmed an old idea that there was a 35 year cycle in the weather. He made numerous observations on the weather and the tides.

He was clerk of Magdalen College, 1640-8. Schoolmaster of Faversham, 1648-61. Later, appointed chaplain to the Lord Herbert, 1660-4. Archdeaconry of Sarum, 1664, and a prebend in Salisbury Cathedral that same year. Rector of Upwey, 1664-70. Lord Herbert offered him a chaplainship in 1660. It is clear that he languished until the Restoration and then received a living. Childrey made and improved telescopes.

CHLADNI, Ernst Florenz Friedrich. (BORN: Wittenberg, Germany, 30 November 1756; DIED: Breslau, Germany, 3 April 1827) *German physicist*.

At the urging of his father, until 1778 Chladni studied philosophy and jurisprudence in Wittenberg and Leipzig. After the death of his father however, he turned to the natural sciences. His hopes of becoming a professor of mathematics at the University of Wittenberg were not realized. He turned to experimental acoustics and discovered the Chladni sound figures, which are named for him. To support himself, he invented a musical instrument called the Euphon, which he took on lecture tours to Dresden (1791), to Göttingen and Berlin (1792). Eventually, Chladni was appointed professor of philosophy and jurisprudence at Kemberg near Wittenberg.

Friedrich Herrknoch. | 1794.

8°: [1]-63, [1] p.

VERY RARE. Considered one of the foundation works of modern meteoritic studies, this thin volume bears the cumbersome and unrevealing title, *Concerning the Origin of the Mass of Iron Discovered by Pallas and Others similar to it, and Concerning a few Natural Phenomena Connected therewith*. However,

UEBER DEN URSPRUNG, 1794

at the start of the text Chladni asserts unequivocally that the fireballs sometimes seen in the sky consisted of compact and heavy matter, which came from cosmic space, and that the iron mass found by Pallas in Siberia was a meteorite similar to others that had sporadically fallen in other parts of Europe. Chladni then convincingly presents his evidence for this assertion.

At the time, meteorites and the fireballs that preceded them were thought to be of atmospheric origin and not necessarily connected to one another. To support his theory that meteorites and the fireballs that preceded their impact were of cosmic origin, Chladni compiled accounts from about two dozen reports. From this Chladni concluded the fireballs could not be connected to the northern lights, because of their high altitude they could not be electrical in nature, and they were unlike lightning in having a distinctive shape and following a parabolic path in the sky while they were also subject of repeated explosions. Chladni next turned his attention to reports of falls, documenting a total of nineteen. The most impressive, certainly, was Hraschina, which had been preceded by a fireball that had exploded into several parts and attested to by the sworn statements of seven eyewitnesses. Eight of the nineteen falls cited had occurred in the eighteenth-century: Ploschkovitz, Nicorps, Hraschina, Tabor, Albareto, Lucé, Aire-sur-la-Lys, and Eichstädt. Chladni next examined meteoritic iron discussing principally the Pallas iron [Krasnojarsk], although he provides brief accounts of other iron

CHLADNI

masses. Chladni concludes that there are bodies outside the earth's atmosphere that occasionally fall to earth as meteorites.

The impact of Chladni's work was to document in a well reasoned manner (1) that stones do fall from the sky, (2) that the stones (or irons) are the substance composing fireballs, and (3) that the fireballs have a cosmic origin. The first two ideas took hold in the scientific community soon after publication; however, it would be many decades before the cosmic origin of meteorites was definitively proven.

French transl., 1802-3: Coquebert, Eugène, trans., "Réflexions sur l'origine des diverses Masses, der fer natif, et notamment de celle trouvée par Pallas en Sibérie," Traduites de l'Allemand de M. Chladni, *Journal des Mines*, 15 (1802-3), 286-320, 446-485.

RARE. After the appearance of his 1794 work, Chladni continued his interest in meteorites. His employment as a journeying lecturer provided him with the opportunity to scour libraries for rare books and papers that documented fireballs and accounts of stones falling from the sky. In particular, Chladni concentrated on eyewitness accounts that were recorded in the old literature. The years 1816 to 1819 were particularly productive for this purpose, as he began delivering a series of lectures on fireballs and meteorites—the first such popular lectures ever given on the subject. Using his own collection of meteorites that he had acquired through donation, purchase or trade, he traveled from Paris to Vienna thrilling his audience with the accounts of the sky raining stone. As a consequence, he also had the opportunity to examine the meteorite specimens held in many private and public collections, most notably those at Vienna, the largest holding of the time. This allowed Chladni to complete his final book on the subject of meteoritics, *About Fire Meteors and their Fallen Masses*, which was published in Vienna in 1819.

Following the same formula as his 1794 work, Chladni provides a detailed description of the meteorite theory, adding comprehensive documentation of all reports of fireballs and meteorites. The importance and authority of the work in meteoritics was immediately recognized, although Chladni's evidence was still not sufficient to convince the scientific community of the cosmic origin of the stones. At Chladni's request, the director of the K.K. Hof-Mineralien-Cabinette of Vienna, Karl von Schreibers [1775-1852] added a supplement, documenting the meteorite falls represented in that collection.

CLARKE

CLARKE, Edward Daniel. (BORN: Willingdon, England, 5 June 1769; DIED: Pall Mall, England, 9 March 1822) *English traveler, antiquary & mineralogist.*

Clarke was Senior Tutor of Jesus College, Cambridge. Beginning in the 1790's and lasting until near his death, he traveled extensively. Between 1799 and 1802, these tours included a long ranging excursion throughout Asia and Asia Minor. In 1808, he was appointed the first professor of mineralogy at Cambridge University. He also accepted a posts as Vicar of Harleton in 1805 and Rector of Yeldham in 1809, both of which he retained until his death. He built up a substantial mineral collection of worldwide localities, which was purchased after his death by Cambridge University in 1823 for £1,500. Clarke's *Travels in Various Parts of Europe, Asia and Africa* (6 vols., London, 1810-20) was a work said to be reliable in its descriptions and popular within English society.

RARE. This book contains an outline of Clarke's mineralogical lectures as delivered at Cambridge University in the early part of the nineteenth century. The author follows the Linnaean natural history model in his classification, by placing minerals into a Class, Order, Genus, Species, Variety schematic. This text would have been used by students attending the lectures and consequently many copies were probably badly damaged or destroyed by their owners.

PLATES: Frontispiece: "Apparatus for using the Gas
blowpipe, and for securing the safety of the Opeator."
Signed: R.B. Harraden del. J Schury sculp. A descriptive
commentary of this plate is included in the text.

SCARCE. This work describes in detail Clarke's
version of the hydrogen-oxygen blow-pipe. The author
provides a short history of the problem, a review of
his new apparatus design, and descriptions of a large
number of experiments that were completed before the
extremely high temperature of the blow-pipe. Included
in the discussion are Clarke's successful experiments
in reducing apparently non-metallic mineral substances
to their metallic state. These include the reduction
of lime, Iceland Spar, Aragonite, common chalk, and
limestone from various world locations, to elemental
Calcium, various Apatite specimens to Phosphorus,

aluminum containing minerals to elemental Aluminum, etc. In another part, Clarke describes the unsuccessful experiments in reduction. Included are Barite, strontium earth, Cerite, Columbite, Chromite, Titanite, Scheelite, meteoritic stones, etc. As can be judged, this work was important step in high temperature analysis of mineral substances.

Travels in Various Countries of Europe, Asia and Africa. Part the First: Russia, Tartary, And Turkey. By Edward Daniel Clarke. Philadelphia, Published by Anthony Finley; Printed at the Lorenzo Press of E. Bronson, 1812.

8°: 612 p., 2 maps (one folding).

VERY SCARCE. An important early account of Clarke's journey through Russia, with stays in Moscow and St. Petersburg before traveling to the Crimea, the land of the Don Coassacks, Tartary, Circassia and Turkey. Throughout his life, he travelled widely throughout Europe and Asia, collecting sculpture and manuscripts as well as the geological specimens that were his academic study. This book was later reprinted several times, and its text was included in the comprehensive four volumes of travels Clarke eventually published.

Contents include: Tables of Russian Measure; Petersburg; journey from Petersburg to Moscow; Novogorod; Moscow; journey from Moscow to Woronetz; to the territory of the Don Cossacks; capital of the Don Cossacks; voyage down the Don, to Azaf and Taganrock; European and Asiatick shores of the Sea of Azuf; journey through Kuban Tartary to the Frontier of Circassia; journey along the frontier of Circassia to the Cimmerian Bosphorus; from the Cimmerian Bosphorus to Cassa; fro Caffa to the Capital of the Crimea; to the Heracleotick Chersonesus; along the south coast of the Crimea; from the Crimea, by the Isthmus of Perecop, to Nicholae; to Odessa; voyage to the Harbour of Ineada in Turkey; from the harbour of Ineada, in the Black Sea, to Constantinople; etc.

RARE. The literary tool of writing philosophical essays as a paradox was a great success in the sixteenth century. De Clave's *Paradoxes, ou Traitez Philosophiques der Pierres et Pierreries* follows this tradition. Within this mineralogical work, the nature of precious stones and minerals and the definition of their formation are discussed, much as De Boott wrote in his classic tome.

In the foreword to the work, de Clave outlines an ambitious goal of the book, which was to write forty treatises outlining the fruits of over thirty years of research. However, only the two books contained in the *Paradoxes* were ever published. The first of these in 18 chapters discusses the opinions of previous researchers on the definitions of stones, their material cause (chap. iii-x) and their efficient cause (chap. xi-xviii). Here the principle authorities are Aristotle, Theophrastus, Avicenne, Albertus Magnus, Agricola Gabriel Fallopio, Jules-César Scaliger and Girolamo Cardano, which reflects the importance as well as the tradition of Aristotelian philosophy in the mineralogical science of the time. De Clave however attacks their opinions on the formation of stones and metals. The second book in 28 chapters describes the generation (chap. iii-viii), the seeds (chap. xi-xvii), the definition (chap. xx-xxiv) and the nutrition (chap. xxv-xxviii) of stones. At this time it was popular to believe that stones formed from seeds, much as plants, found in the earth.

CLEAVELAND, Parker. (BORN: Byefield, Massachusetts, U.S.A., 15 January 1780; DIED: Brunswick, Maine, U.S.A., 15 October 1858) *American physician, geologist, mineralogist & educator.*

Cleaveland graduated with an M.A. from Harvard in 1802, receiving his M.D. from Dartmouth in 1823, and his LL.D. from Bowdoin College on 1824. From 1799 to 1802, he taught school in York, Maine, then he became a tutor in math and natural philosophy at Harvard until 1805. Cleaveland was then appointed professor of math and natural philosophy at Bowdoin College where he remained the rest of his life. He was also was from 1820 to '58, professor of materia medica at the Medical School of (Brunswick) Maine. Cleaveland held membership in many scientific societies including the American Academy of Arts and Sciences and the American Philosophical Society. A variety of the mineral albite was named "Cleavelandite" after him by H.J. BROOKE in 1823.

PLATES: The folding hand-colored map shows the eastern United States to the west of the Mississippi River. Major cities and rivers are located. In the lower right-hand quadrant is the text: "The | United States | of | America | Published by | Cummings & Hilliard. | N^o 1. Cornhill. | Boston. | Wightman Sc." The five folding plates show either apparatus or crystal drawings. Plates 1, 2 & 4 are signed W.B. Annin Sc., while plates 3 & 5 are signed M. Butler Sculp.

SCARCE. This is the first textbook authored by an American, which focused on the mineralogy and geology of America. From the outset Cleaveland had set as his task to write a textbook of mineralogy and geology particularly suited to American readers. All other mineralogies prior to this volume had been European in origin, and no one had described the minerals of America in a comprehensive way. The task for Cleaveland was daunting. America was a large area which he could not hope to completely explore. Even so Cleaveland took the first step. Starting in 1809 he began to develop a network of correspondents and informants throughout the Eastern United States with the goal of developing a

CLEAVELAND

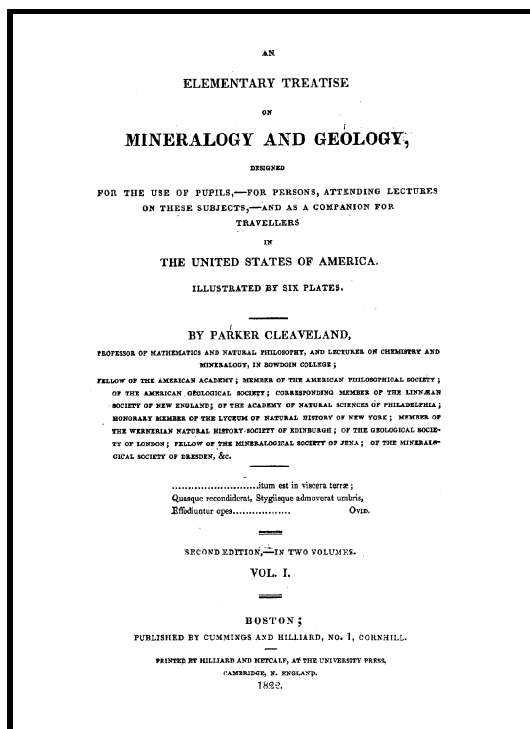

list of American mineral localities. Through persevering diligence he slowly accumulated the necessary information. Even the War of 1812 did not unduly delay the project, although Cleaveland did prepare his notes for rapid evacuation in the event the British soldiers encamped several miles away did pillage Bowdoin College. Throughout this research Benjamin Silliman of Yale University was a tower of strength to Cleaveland and his project; Silliman supplied specimens, preformed chemical analyses and experiments and advised Cleaveland as to the general plan the book should follow.

The work is divided into three sections: Introduction, Descriptive Mineralogy and Geology. The Introduction is made up of four chapters. The first covering definitions and preliminary observations is derived from the German school of mineralogy, most notably Werner's philosophies. The second chapter concerns crystallography, external characters and chemical composition of minerals. Chapter three outlines the classification system by which the minerals will be arranged. It is a composite system with its roots in the schemes developed by Haüy and Bronigart. The final chapter of the introduction describes the nomenclature of mineralogy. Following the introduction, a "Tabular View of the Simple Minerals" is presented. This section the largest of the work is essentially a descriptive mineralogy. It emphasizes American localities but is also one of the great descriptive mineralogies of the time. Cleaveland had not studied in Europe, and so his only knowledge of mineralogy had been self learned from the principle mineralogical works of Kirwan, Haüy, Jameson, Thomson, Bronigart, Werner, etc. In his descriptions, Cleaveland synthesizes the ideas of these varied authors into a description for each mineral that is however his own statement. The final section of Cleaveland's *Treatise* is devoted to the geology of the United States, and includes as illustration a geological map of the Atlantic seaboard. This was a composite of a geographical map prepared by his publisher, Cummings and Hilliard, and a geological map previously published by William Maclure.

Upon its publication the *Treatise* was deservedly praised both in America and Europe as the definitive statement on American mineralogy. Reviewers on both sides of the Atlantic praised its content, and the tireless efforts of the author in acquiring locality information. His peers also acknowledged the value of the work. No less a personage the famous Haüy is reported to have called it, "the best elementary work on the science extant." It was due to this welcome reception that the first printing of 1000 copies was nearly sold out by the summer of 1818.

tion of the Plates.”; [799]-818, “Index.”; [1 pg], “Errata.”; [1 pg], Blank.; [At end], 5 plates.

SCARCE. The first edition of the *Treatise* had sold out in 1818. Cleaveland at the behest of his publisher undertook the preparation of a second edition. For this work he decided to focus even more on American localities. This led him to send out an announcement of his intention to produce a second edition, adding an appeal for descriptions of mineral localities in the United States.

“I am preparing a new edition of my Mineralogy, and solicit from you accounts of new Localities, and such other remarks, as may tend to render the work more useful.”

“I wish to connect with the account of the Locality some brief Geological notice, viz. whether the mineral occurs in veins, or in beds, or is disseminated—the associated minerals—and the rock, which contains them. In most cases, the form, structure, and prevailing color of the mineral may be mentioned.”

“I also wish to obtain as accurate information, as possible, in regard to all minerals explored for *useful* or *ornamental* purposes, such as Nitre, Common Salt, Marble, Marl, Gypsum, Precious Stones, Steatite, Roof Slate, Clays, Pigments, Anthracite, Graphite, Coal, Ores of metals, Chromate of Lead, &c. The quantity of the aforementioned substances *annually* obtained or manufactured, the *quality*, including the per cent. of metal yielded by ores, and the *price* are particularly requested.” [Quoted by Greene, J.C. & Burke, J.G. (1978), p. 90–91.]

The response to Cleaveland’s request was extraordinary. His colleagues were eager to supply all the information they could to insure the second edition was a success. More than any revisions Cleaveland made to the text, it was the inclusion of this data that ballooned the size of the *Treatise* an additional 150 pages.

This work with minor revision follows the scheme of the first edition. It contains a frontispiece geological map prepared from William Maclure’s earlier map of 1817 and written communications with H.H. Hayden. It was the second major geological map of the United States. Of the text, the first part treats crystallography, physical and optical properties, chemistry, systematics of mineralogy, and nomenclature. This is followed by the descriptive mineralogy, which begins in volume one and is carried well into the second. The introduction to geology then commences. A vocabulary, explanation of the five plates, and an index conclude the work.

CONTENTS: [i-ii], Title page, verso blank.; [iii]-viii, Dedication, signed C. Collini.; [ix]-xii, "Table I Generale." [=contents].; [1]-384, Text.

PLATES: The plates are interspersed in the text. Tab. I (pg. 2), Fossils. Tab. II (pg. 14), Shells and teeth. Tab. III (pg. 16), Shells. Tab. IV (pg. 17), Shells. Tab. V (pg. 17), Shells. Tab. VI (pg. 23), Fossils. Tab. VII (pg. 26), Fossils. Tab. VIII (pg. 29), Factory. Tab. IX (pg. 109), Scenic view. Tab. X (pg. 143), Fossils. Tab. XI (pg. 191), Quartz crystals. Tab. XII (pg. 220), Quartz crystals. Tab. XIII (pg. 232), Lapidaries at work. Tab. XIV (pg. 239), Lapidaries at work.

RARE. The work describes the mineralogical and the geological wonders Collini saw on a trip through Europe. He includes descriptions of the mountains traversed, various agates he finds, mercury and copper mines, manufacturing processes, the working of agates in Oberstein, and observations on volcanoes, basalt and quartz. The plates depict shells, fossils, quartz crystals, cave formations, ancient lapidary methods and scenic views.

COLLINS, Joseph Henry. (BORN: London, England, 1841; DIED: London, England, 1916) *English mining expert*.

Collins had his early education in Derbyshire, which influenced his life long interest in minerals. He was apprenticed to the sculpture R. Underwood, but instead chose to continue his education. While attending the Royal School of Mines in 1868, Collins together with his classmate, A. LIVERSIDGE successfully carried off one of the Royal exhibitions, much to the embarrassment of the school authorities. In 1869, Collins was offered a position as lecturer and assistant secretary to the Miner's Association of Cornwall and Devon. In accepting the post, he moved to Truro, where he became well versed in the Cornish mining methods. In 1873, Collins returned to London and began working as a consulting engineer. From 1880 to 1884 he was employed in Spain, but returned to London for health reasons. Collins was elected a Fellow of the Geological Society, London in 1869, and he was also instrumental in founding the Mineralogical Society of Great Britain and Ireland in 1876.

VERY SCARCE. This work intended for students, miners and collectors describes the mineral species found in the peninsula of Cornwall in the north-west of the island of England. This extraordinary area though small in size has produced an abundance of different mineral species. Part one provides a determinative mineralogy, gives a nomenclature of Cornish minerals, provides a systematic overview, distribution in the area and the paragenesis of the species ?? Part two is an alphabetical list of minerals found in Cornwall and Devon.

COMPENDIOUS SYSTEM.

1182. — English, 1794 [First edition].

A | Compendious System | Of | Mineralogy & Metallurgy; | Extracted From | The American Edition | Of | The Encyclopaedia, | Now Publishing | By Thomas Dobson, | At The Stone-House, N° 41, South Second-Street. | M DCC, XCIV.

12°: A² B-Ss⁶ Tt²; 255ℓ.; [i]-iv, [1]-505, [1] p. PAGE SIZE: 176 x 98 mm.

COMPENDIOUS SYSTEM, 1794

CONTENTS: [i-ii], Title page, verso blank.; [iii]-iv, "Contents."; [1]-505, Text.; [1 pg], Blank.

RARE. The third edition of the *Encyclopaedia Britannica* (15 vols., London, 1787-97), which included biographical sketches and accounts of historical events, is known to have sold over 13,000 copies in the British Empire. The Philadelphia publisher Thomas Dobson [see note below] thought he saw a business opportunity and issued a call for subscribers for an American version. Part of Dobson's incitement was that all materials from paper and ink to type and binding would be of American origin. This brought out a sufficient subscription and publication began in 1790 and was completed 18 volumes later in 1798. However, from the beginning, the venture was strapped for cash and in late 1793 a fire at Dobson's shop further strained the publisher's finances. Beginning in 1794 several publications appeared that are extracts of long articles from the complete *Encyclopaedia*. These rare books were probably published to help keep Dobson solvent.

The *Compendious System of Mineralogy and Metallurgy* was one of several books separately published that contain articles from Dobson's *Encyclopaedia*. The original articles were authored by the famous Scottish mineralogist ROBERT JAMESON, and give a good overview and description of the subjects at the end of eighteenth century. Because of its early date this is the first book published on these subjects in America in English and is preceded only by the 1763 German edition of Barba published at Ephrata, Pennsylvania [which see

COMSTOCK

entry under Barba]. The 1798 title edition ranks as the second mineralogical work published in America in English [see next entry]. However, both editions are rare items and infrequently encountered.

Thomas Dobson. (BORN: probably near Edinburgh, Scotland, 1751; DIED: Philadelphia, Pennsylvania, U.S.A., 9 March 1823) *American publisher, printer & bookseller.* Dobson married in Scotland but emigrated to the United States in the spring of 1784. He opened a bookshop in Philadelphia in 1785 and was soon established as one of the leading dealers of medical, professional and scientific books in the United States. In the post Revolutionary period he was noted for printing America editions of recent British publications. To sell his merchandise, he cultivated close relationships with the local scientific societies and the faculty of the University of Pennsylvania, where Dobson met many potential customers. Several set backs through the years caused his business to fail and for Dobson to die in obscurity.

COMSTOCK, John Lee. (BORN: East Lyme, Connecticut, U.S.A., 25 September 1789; DIED: Hartford, Connecticut, U.S.A., 21 November 1858) *American author.*

Little is known of his life until the war of 1812-15. Then he worked as a surgeon in the army and thereafter added M.D. to his name. Comstock was a self educated man, and upon his discharge from military service, he returned to Connecticut where he lived the remainder of his life in Hartford. As a means of livelihood, Comstock prepared texts for the use of schools on a large spectrum of subjects, including chemistry, mineralogy, botany, natural history, geography, and physiology. His *Natural Philosophy* became a standard, and its world wide sales approached nearly a million copies—evenmore remarkable in the nineteenth century, than it is today. It is recorded that Comstock possessed a good mechanical skill that allowed him to construct whatever apparatus might be required in his various studies, and being an able draftsman, create the illustrations used in his numerous books.

VERY SCARCE. An 1826 a notice in the *American Journal of Science* announced the pending publication

ELEMENTS OF MINERALOGY, 1827

of *A Manual of Mineralogy* by J.L. Comstock in which “the science is illustrated by cuts in the text, and a considerable number of colored engravings ...” Since no copies are recorded in the libraries of the United States or Great Britain, this particular title would seem never to have been published. In the next year, however, Comstock’s *Elements of Mineralogy* did appear, and although containing no plates, colored or plain, the work is illustrated throughout with woodcuts. *Elements* would therefore appear to be the rechristened *Manual* announced in 1826.

Elements is a volume that was designed as a less expensive and weighty alternative to PARKER CLEVELAND’s landmark *Treatise*. It was intended to be used as a textbook in the schools and higher seminars in America, which were instructing students in mineralogy. Therefore, Comstock begins the volume with the basics, including preliminary definitions of mineralogy and geology and the characters of minerals, and continues into slightly expanded definitions of external characters, color, luster, cleavage, transparency, etc. The greater majority of the volume is then given over to the describing of specific mineral species. Comstock described his *Elements* in an advertisement as a volume “... of such a size as to come within the means of almost everyone ... and if well done, [it] would facilitate the progress of science in our country.” It is well worth noting that *Elements* was not kindly received in its only review. Here the anonymous writer berates Comstock for appearing to know little or nothing of the science

of mineralogy and its current state of advancement in America. The review ends with a classic poison pen: “This work is as full of errors of the press, as of the pen, and so far from facilitating the progress of science, carries us back something like ten years.”

Another issue, 1832: *Elements of Mineralogy*. Boston?, 1832. 8°: 343, [1] p., illus.

Another issue, 1841: *Elements of Mineralogy*. Boston?, 1841. 8°: 369, [1] p., illus.

Introduction

1185. — English, 1832 [First edition].

An | Introduction | To | Mineralogy; | Adapted To The Use Of Schools, | And Private Students. | Illustrated By Nearly Two Hundred Wood Cuts. | [rule] | By John L. Comstock, M.D. | [rule] | Hartford: | Published by B.B. Barber. | [rule] | 1832.

12°: 343 p., illus.

VERY SCARCE. *Introduction to Mineralogy* is written in a similar though distinct style from its forebearer, *Elements*. The first noticeable difference is that the woodcuts are of a cruder, less refined character; however, the cuts do depict the same subjects as did *Elements*. Unlike the earlier work though, *Introduction to Mineralogy* enjoyed for many years a broad popularity as a textbook and fieldguide, which also created its peculiar bibliography. Oddly, *Introduction to Mineralogy* was never reviewed or even noticed in the journals of the period. This fact undoubtedly contributed to its success as it contains many flaws. In addition, no reference to either of Comstock’s works appears in any other American mineralogy. Yet, the legacy of these textbooks is that they were usually the first mineralogical work that exposed American students to the science, and during the gold rush, Comstock’s *Introduction* was a title carried west by many a forty-niner.

1186. 2nd edition, 1832: An | Introduction | To | Mineralogy; | Adapted To The Use Of Schools, | And Private Students. | Illustrated By Nearly Two Hundred Wood Cuts. | [rule] | By John L. Comstock, M.D. | [rule] | Second Edition, Improved. | [rule] | Hartford: | Published by B.B. Barber. | [rule] | 1832.

12°: [4], [3]-143 (i.e., 343), [1] blank p., illus., index. Page 343 misnumbered 143.

VERY SCARCE. This second edition of *Introduction* appeared the same year as the first, 1832, and contains according to its Advertisement, “more than forty new cuts” and corrections throughout most parts of the volume. This second edition was issued several times with either a new year or new publisher on the title page; however, the pagination of the volume remained the same. Other issues of this edition appeared in:

REFERENCES: Hazen & Hazen, *American Geological Literature*, 1980: no. 2510.

1187. 3rd edition, 1836: An | Introduction | To | Mineralogy; | Adapted To The Use Of Schools, | And Private Students. | Illustrated By Nearly Two Hundred Wood Cuts. | [rule] | By John L. Comstock, M.D. | [rule] | Third Edition,

AN INTRODUCTION TO MINERALOGY, 1832

Improved. | New York: | Published By Robinson, Pratt, & Co. | [rule] | 1836.

12°: 1-30⁶ 31⁵; 185⁴.; [1]-369, [1] p., 186 illus., index. CONTENTS: [1-2], Title page, verso copyright notice; [3], "Advertisement to the second edition"; [4], "Advertisement to the third edition"; [5]-10, "Index"; [11]-342, "Introduction to mineralogy"; [343]-360, "Appendix. Containing the description of minerals not embraced in the body of the work"; [361]-366, "Explanation of terms, & c., commonly used in mineralogical descriptions"; [367]-369, "A table, exhibiting the angular admeasurements of crystals by the Reflecting Goniometer, according to Phillips."; [1 pg], Blank.

SCARCE. This text is divided into two parts. The first is an introduction to mineralogical science. It covers crystallography, predominate forms of crystals, mechanical division of crystal angles, primitive forms, most common forms, double refraction, colors of minerals, luster, hardness, electricity, specific gravity, and chemistry. The second is a descriptive mineralogy which emphasises localities in the United States. Closing the work are an explanation of terms, and a table of goniometric measurements according to WILLIAM PHILLIPS. This is the third, and last revision of the text by the author. Comstock updated the book by additions of new species and an appendix "containing the description of minerals not embraced in the body of the work." Locality information was also updated. Although no other additions or corrections were ever made to the text again, this book was issued over and over until the middle of the nineteenth century. After the eleventh issue, the publisher, perhaps sensing buyer reluctance, replaced the words "Third edition, improved" on the title page, with an edition note [perhaps noting the edition of the title page itself]. The twenty-sixth and probably final "edition" appeared in 1852.

CORNWALL, Henry Bedinger. (BORN: Southport, Connecticut, U.S.A., 29 July 1844; DIED: Princeton, New Jersey, U.S.A., 1 April 1917) *American mining engineer & chemist.*

Cornwall was a graduate of Columbia College in 1864, and its School of Mines in 1867 as a mining engineer. From 1865 till 1873, he was an assistant in the School of Mines, with the exception of two years spent in study at the Freiburg Bergakademie. In 1873 he was elected to the chair of analytical chemistry and mineralogy in the school of science of the College of New Jersey. In 1865 he was appointed superintendent of the Continental Zinc and Lead company, of New York. During 1870-'1 he filled a similar office in the General Silver-Mining Company, and spent fifteen months while in their employ examining the Batopilas mines, in Mexico. Cornwall has published numerous scientific papers, and has paid special attention to water-analysis.

Manual | Of | Blowpipe Analysis, | Qualitative And Quantitative, | With | A Complete System | Of | Determinative Mineralogy. | By H.B. Cornwall, | [...2 lines of titles and memberships...] | With Sixty-Nine Wood-Cuts And One Lithograph Plate. | New York: | D. Van Nostrand, Publisher, | 23 Murray and 27 Warren Street. | 1882.

8°: [i]-x, [1]-308, [8] p., one plate, 69 illus.

CONTENTS: [i-ii], Title page, verso "Copyright, | 1882, | By D. Van Nostrand."; [iii]-iv, "Preface."—signed Henry B. Cornwall, August 1882.; [v]-x, "Contents."; [1]-296, Text.; [297], "Symbols And Atomic Weights Of The Elements."; 298-304, "Index To Minerals."; 305-308, "General Index."; [8 pgs], Advertisements.

VERY SCARCE. Cornwall's volume includes the general range of topics usually discussed under the general description of blowpipe analysis. Characterized by the excellent writing that gives full and complete descriptions, the directions for the techniques of manipulation and result interpretation are presented in such a manner that even a beginner could make use of the book.

CRAMER, Johann Andreas. (BORN: Quelinburg, Germany, 14 December 1710; DIED: Berggiesshübel, near Dresden, Saxony, Germany, 6 December 1777) *German mining official.*

Cramer first studied law, then from 1734 mining and chemistry. He visited England in 1738 to 1739, then the Erzgebirge in Saxony, becoming in 1743 Kammerrath of mines and smelters for Brunswick at Blankenburg. He lost this post in 1773 through the actions of his enemies. In 1775 he visited the Hungarian mines before returning in 1777 to Germany.

ELEMENTS, 1741

PLATES: The six engraved plates show various apparatus and techniques in assaying. Each is signed J. Mynde sc. They consist of: Plates I-III, showing various apparatus. Plate IV show furnaces. Plate V, depict bellows, scales, weights. Plate VI, renders a storage diagram for a glass furnace.

SCARCE. Translation of *Elementa Artis Docimasticæ* (1st ed., Leipzig, 1739), the most famous metallurgical textbook of its time. Cramer was the best assayer of his time, and he brings all of his practical experience into his books. It was the first work to reduce the art of assaying in metallurgy into a system, and Cramer's textbook is the first of its kind. It divides the subject into two sections: one theoretical, the other practical. Cramer acknowledges the prior work in the area of Agricola, Ercker and Stahl. Cramer was the first to recommend the use of the blowpipe in assaying small quantities of ores on a charcoal block with borax acting as a flux. He describes his blowpipe as being made of copper with a ball included to condense moisture in the breath. Cramer is equally meticulous in describing the other tools of the trade, many of which are depicted on some of the finely engraved plates.

VERY SCARCE. The last edition of the famous *Elementa Artis Docimasticæ* (1st ed., Leipzig, 1739) to be revised by the author. It has been expanded and revised through out by Cramer's significant additions to the original text and the inclusion of a third section describing metallurgical processes on a large, industrial scale. Many more plates showing equipment and processes have also been added, and while the title page of the third part calls for 22 plates, only 20 appear to have been issued.

VERY SCARCE. Translated by J.-F. de Villiers.

CRICHTON, Alexander. (BORN: Edinburgh, Scotland, 2 December 1763; DIED: The Grove near Sevenoaks, Kent, England, 4 June 1856) *English physician.*

Crichton recieved his M.D. from Leyden in 1785. He perfected his medical skills by studying throughout Europe. In 1804 came an appointment as personal physician to Tsar Alexander I of Russia. Upon retiring from this post, he returned to England. Crichton wrote several books dealing with medical and geological subjects, and held membership in many societies, including F.L.S., 1793, F.R.S., 1800 & F.G.S, 1819. While living in Russia he continued to add to his mineral collection begun years before. It eventually consisted of over 4,000 specimens of the highest quality from localities throughout the world

Notizen über die Mineralien-Sammlung Sr. Excellenz Des Herren Dr's Alexander's Von Crichton, ... Von Joseph Friedrich Wagner (Moskwa, 1818).

See: Wagner, Joseph Friedrich.

RARE. This notice was printed in anticipation of a unique auction of minerals in the upcoming spring. Crichton had decided to retire from public life, and he commissioned G.B. Sowerby [see note below] to sell his large mineral collection. Efforts were made by Sowerby to sell the accumulation en block, but no purchaser was forthcoming. This notice was published to tantalize prospective bidders at the auction to be held in the coming spring. It lists highlights of the collection, most notably rare crystallized specimens from Russia.

George Brettingham Sowerby. (BORN: 12 May 1788; DIED: 26 July 1854) *English conchologist, natural history dealer & artist-publisher*. Sowerby assisted his father in the preparation and publication of various natural history works, including *Mineral Conchology* (London, 1812-22) and *The Genera of Recent and Fossil Shells* (London, 1820-34).

CRONSTEDT

CRONSTEDT, Axel Fredrik. (BORN: Stropsta, Turinge Parish, Södermanland, Sweden, 23 December 1722; DIED: Säter, Sweden, 19 August 1765) *Swedish mineralogist & chemist.*

Cronstedt studied mathematics at Uppsala, where he came under the influence of J.G. WALLERIUS and S. RINMAN and became interested in mining and mineralogy. He served in the Swedish army from 1741 to '43, but

afterwards, he became a mining expert by visiting the various mines and smelters throughout Sweden. In 1747, He was appointed assistant to D. TILAS, before becoming in 1748, director of the East and West Bergslagen mining district. Cronstedt discovered the element Nickel while analyzing the mineral "kupfernickel" [niccolite] in 1751. He is also among the first researchers to use the blow-pipe in mineral analyses, generating better results than anyone up to that time. Berzelius said of him, "Cronstedt, the founder of the chemical system of mineralogy, a man who by his acuteness in that science rose so far above his age that he was never correctly understood by it." During his life he accumulated a large mineral collection of 3,000 items which was inherited by his son. The collection and its manuscript catalog were purchased by a wealthy Danish landowner and collector who moved it to Paris where it was lost. Cronstedt was elected in 1754 a member of the Kungliga Vetenskaps Akademiens, Stockholm (Academy of Sciences, Stockholm), and the mineral "Cronstedtite" was named in his honor by J. Steinmann in 1821.

FÖRSÖK TILL MINERALOGIE, 1758

SCARCE. Published anonymously. This is one of the most important and influential works in mineralogy. By precise chemical analysis, Cronstedt first realized that every mineral is created from a specific set of chemical constituents; he further realized that the chemical uniqueness of minerals formed an ideal concept on which a system mineralogy could be built. Pursuing this insight with all his great skill and perseverance, he applied every test at his disposal to determine a mineral's chemical composition more accurately than had any other previous investigator. In fact, Cronstedt was so successful using the blowpipe in making his determinations that he can rightly be called the founder of systematic blowpipe analysis. Using the results of his various tests, Cronstedt arranged minerals according to their contained chemical elements, thus creating the first mineralogical system to rely almost exclusively on chemical determinations. This new method had very wide appeal among mineralogists, and many subsequent systems would copy Cronstedt's lead. Another innovation was to distinguish, for the first time, between true minerals of homogeneous chemical composition and rocks, which are a mixture of several minerals; the later, together with fossils, the author separately classified in an appendix.

A.G. Werner, 20 March 1780.; [20 pgs], "Vorrede | des Verfassers."; [10 pgs], "Einleitungs=Tafel | zu | dem ersten Theile | dieser | Mineralogie."; [1]-254, Text.; [5 pgs], "Mineral=System | des Uebersetzers."; [1 pg], Blank.; [2 pgs], "Verbesserungen."

VERY SCARCE. A partial translation of the 1758 Swedish edition. Believing that Cronstedt's work represented the best chemical classification available, the noted mineralogist, Abraham Gottlob Werner translated the section dealing with earths and stones; however, Werner so expanded the work by incorporating his own theories on the external characteristics of minerals that this translation rapidly became accepted throughout Europe as the best reference and textbook of contemporary mineralogical science.

VERY SCARCE. Translated by Gustav von Engeström, with considerable additions and editing by Joao Jacinto de Magalhaens. The book begins with a section on the formation of minerals followed by chapters describing the general divisions of minerals and fossils, the different kinds of earths, salts, inflammables, and metals. An appendix is present, containing an account of composed stones and petrifications; a treatise on the use of the blowpipe; a description of the three pocket laboratories; a method for analyzing earths; a description of an instrument to determine specific gravity; and a new method for making general weights.

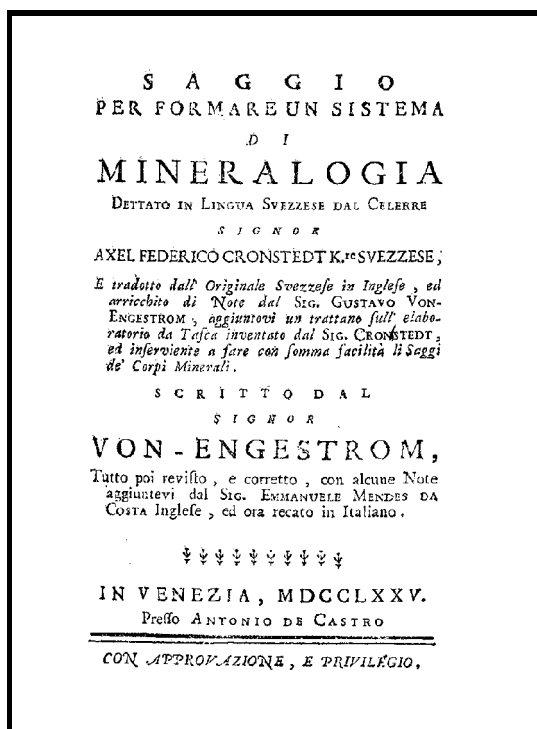

Reprint, 1987: New York, AMS Press, Inc., 1987. 2 vols. [ISBN: 0404184626].

Jean Hyacinth de Magellan [Portuguese: João Jacinto de Magalhães]. (BORN: Aveiro, Portugal, 1723; DIED: London, England, 1790) *Portuguese naturalist & author.* Magellan entered the Catholic College of the Sapiência in Coimbra, where he studied for 11 years. During his classical education he became proficient in Latin, Greek, Spanish, French, German and English as well as the studies of mathematics, chemistry and physics. After graduation, he entered into a religious life. However, his scientific interests caused him to abandon the monastery in 1754 and make a "philosophical trip." He witnessed the devastating Lisbon earthquake of 1 November 1755, before leaving for France in 1756. From there he traveled extensively in throughout Europe meeting the leading scientists of the time. He arrived in London in 1763, and remained.

CRONSTEDT

His chief contribution to science were his mathematical, scientific and geodetic instruments, which are of the highest caliber. He supplied these instruments to the governments of Portugal, Spain, France and Russia. Magellan was a Fellow of the Royal Society of London and elected on Benjamin Franklin's recommendation to the Philadelphia Academy of Science.

1215. — German, 1781.

Mineralgeschichte über das Westmanländische und Dalekarlische Erzgebirge auf Beobachtungen und Untersuchungen gegründet, nach dessen Handschrift aus dem Schwedischen übersetzt von

J.G. Georgi. Zum Drucke befördert von J.C.D. Schreber. Mit einer Kupferplatte. Nürnberg: in Verlag der Grattenauerischen Buchhandlung, 1781.

8°: 8 A-O⁸ (Plate follows, O⁴); 118ℓ.; [i]-xiv, [1]-216, [8] p., one plate. Includes index. Head and tail pieces.

VERY SCARCE. Translated from an original manuscript by Johann Gottlieb Georgi [see note below] and published at the expense of JOHANN CHRISTIAN DANIEL SCHREBER. The volume describes the mineral wealth of a region in Sweden known as Dalecarils. Contained in this work are extensive discussions of the geological structure of the earth. The folding plate shows various mineral veins.

Johann Gottlieb Georgi. (BORN: Gut Wachholzhausen, Pommern, Germany, 31 December 1729; DIED: St. Petersburg, Russia, 27 October 1802) *German apothecary.* Georgi established an apothecary in Stendal, but moved his establishment in 1770 to St. Petersburg. Using this as a home base he made many explorations in the Russian territory. In 1783, he was elected a member of the Academy of Science in St. Petersburg.

CROOK, Alja Robinson. (BORN: Circleville, Ohio, U.S.A., 17 June 1864; DIED: Springfield, Illinois, U.S.A., 1930) *American mineralogist.*

Crook graduated from Ohio Wesleyan University. He then traveled and studied extensively in Europe earning in 1892 a doctorate in geology from the University of Munich. He then spent 14 years as a professor of mineralogy at Northwestern University, before being appointed curator in 1906 of the Illinois State Museum. During the next 24 years Crook was responsible for successfully expanding its collections.

SCARCE. The Illinois State Museum of Springfield, Illinois was created by act of the state Legislature in 1877. It accumulated a menagerie of objects including a large mineral collection. This *Guide* is a fine work that is more than a catalog, being in fact a well written and popular textbook of mineralogy. The text has chapters on nomenclature, the uses of minerals, history of mineralogy, chemistry, etc., which is richly illustrated with text figures and 31 photographic plates showing specimens from the museum.

TABLES, 1887

CRYSTALLOGRAPHIC SOCIETY

1218. — English, 1887 [First edition].

Tables | For The | Determination | of Common Minerals | Chiefly By Their | Physical Properties | With Confirmatory Chemical Tests. | By | W.O. Crosby, | [...2 lines of titles and memberships...] | [ornate rule] | Boston: | J. Allen Crosby, | 1887.

8°: [2], [1]-74 p., tables.

CONTENTS: [2 pgs], Title page, verso "Copyright, 1887, | By W.O. Crosby."; [1]-2, "Preface."—dated 1 November 1886.; [3]-24, Text.; [25], "General Classification."; 26-71, Tables.; [72], "How To Use The Tables."; [73]-74, "Index" (lists the names of the mineral species).

VERY SCARCE. An introductory laboratory manual with an initial text and a series of tables listing the physical properties for determining the more common minerals. Discussions include the crystallography of the systems, internal and external structure, and descriptions of the physical properties and their chemistry, especially with respect to their action before the blowpipe and chemical analysis. Information about the apparatus and reagents used in testing the common minerals is also presented. The *Tables* were apparently popular with many issues and the final edition of the text appearing in 1922.

CROSS, Roselle Theodore. (BORN: Richville, New York, U.S.A., 21 August 1844; DIED: Denver, Colorado, USA, 1924) *American theologian & mineralogist*.

Cross graduated from Oberlin College in 1867, and studied theology at Union Theological Seminary and Andover. Oberlin and York Colleges both awarded him the Doctor of Divinity degree. He assumed the pastorate of a church in Hamilton, New York where he served from 1874-1876. In 1876, Cross came to Colorado at the request of the Home Mission Board to discover the reasons for the short pastorates of young men who came to the west. He became the first pastor of the Congregational church in Colorado Springs who was not directly involved with Colorado College. He served in that position for five years. He founded the short-lived *The Congregational News* in 1879. After Colorado Springs, he became pastor of the Congregational church in West Denver, followed by Minneapolis, York, Nebraska, Eugene, Oregon before returning to Denver. While pastoring in Colorado Springs he organized a group of boys into an exploring association.

The group is credited with the discovery of the "Cave of the Winds" in 1880.

8°: [i]-iii (i.e., viii), 9-206, [2] p.

VERY SCARCE. The text consists of 49 chapters that describe various crystals and their properties as an entree to speak of God to children. It is based on talks and sermons given in The West Denver Congregational Church in 1886-'87 and includes anecdotes of the authors mineral collecting experiences in the West. The last page contains Rev. Cross' advertisement to sell at reasonable prices a collection of "clear, smokey, opaque..." quartz crystals from the Rocky Mountains and elsewhere.

CRYSTALLOGICAL SOCIETY.

1223. — English, 1877-82 [Periodical].

Proceedings | Of The | Crystallogical Society. | [rule] | Parts I. and II. | [rule] | London: | Printed by Taylor & Francis, Red Lion Court, Fleet Street. | [short rule] | 1877, 1882.

2 parts. 8°: [4], 131 p., 8 plates (partly folding), illus.

RARE. All published. The Crystallographical Society was the forerunner of the more famous Mineralogical Society of Great Britain and Ireland, with which it was amalgamated on 11 December 1883. Its purpose was to promote and encourage the study of

the sciences of crystallography and mineralogy. These Proceedings were apparently the only publication while the Crystallographical Society stood alone.

CUMENGE, Edouard. (BORN: 1828; DIED: 1902)
French mining expert.

Cumenge was assigned as engineer to the École des Mines in 1851, but was dismissed the following year. For the remainder of his life, he worked as a consultant in numerous countries including Spain, Italy, Greece, Venezuela, Colombia, The United States, Mexico, and Transylvania. At a copper deposit near Boleo in Baja, Mexico, Cumenge recovered two new mineral species, which were named by Mallard, boleite and cumengeite.

SCARCE. Co-authored with Fernand Robellaz. This is the premier fascicule of which no more were published of what was to be an authoritative work on metals. The text describes gold and its associated minerals. The first portion covers native gold and provides information on the physical properties, crystallography, and chemical and thermal properties. Specimens of native gold are described and illustrated on the plates as are mineral species and rock types that are associated with native metal. The second part describes mineral species that contain gold, such as electum, amalgam, calaverite, petzite, sylvanite, etc. A third section provides an historical introduction to gold and its history in Africa, Asia and Europe. Modern uses and discoveries are then described and include

CUVIER

America and Australia. The series of 13 excellent plates represent natural specimens of exceptional beauty of crystallization.

CUPANI

CUPANI, Francesco. (BORN: Mirto, Messina, Sicily, 21 January 1657; DIED: Mirto, Messina, Sicily, 19 January 1710/11) *Italian botanist.*

Cupani studied medicine and became a Franciscan. He dedicated himself to the study of natural history, and most especially botany. In particular he studied the Sicilian flora and was the friend and student of SILVIO BOCCONE, who was a pioneer naturalist in Sicily. Due to a huge correspondence among his contemporaries, Cupani became very famous throughout all of Europe. He founded a botanical garden 'Garden of Misilmeri' in 1692 where native and exotic plants were cultivated.

1228. — Latin, 1713.

Panphyton siculum; sive, *Historia naturalis de animalibus, stirpibus et fossilibus, quae in Sicilia vel in circuitu ejus inveniuntur. Opus posthumum ad motum Fr. Cupani imaginibus aeneis circiter septingentis e vero tractis. Panormi, Ex typographia regia Antonini Epiro, 1713.*

2°: 84l., showing 168 plates numbered 1-168. Title pages appear only as a manuscript leaf. There may be other text leaves that are not always present.

VERY RARE. Although principally a botanical work this posthumous publication is a generously illustrated natural history of the author's native Sicily. It illustrates the plants, animals, and minerals of that island. There is little or no text as the work was still in preparation when Cupani died. Never the less, the *Panphyton Siculum* contains the first descriptions of several plant species new to science.

Facsimile reprint, 2003: *Panphyton siculum*. Edizione a cura di Carlo Pastena, Angela Anselmo, Maria Carmela Zimmardi. Palermo, Regione siciliana, Assessorato dei beni culturali ed ambientali e della pubblica istruzione, Dipartimento dei beni culturali ed ambientali e dell'educazione permanente, Biblioteca centrale della Regione siciliana, 2003. 3 vols., illus.

CUVIER

CUVIER, George. (BORN: Montbéliard, France, 23 August 1769; DIED: Paris, France, 13 May 1832) *French naturalist.*

Baron Georges Leopold Chretien Frédéric Dagobert Cuvier, French naturalist, was born at Montbéliard, and was the son of a retired officer on half-pay belonging to a Protestant family which had emigrated from the Jura mountains on the French-Swiss border as a consequence of religious persecution.

He early showed a bent towards the investigation of natural phenomena, and was noted for his studious habits and marvellous memory. After spending four years at the Academy of Stuttgart, he accepted the position of tutor in the family of the Comte d'Héricy, who was in the habit of spending the summer near Fécamp. It thus came about that he made the acquaintance of the agriculturist, AH Tessier, who was then living at Fécamp, and who wrote strongly in favour of his protégé to his friends in Paris – with the result that Cuvier, after corresponding with the well-known naturalist E. Geoffroy Saint-Hilaire, was appointed in 1795 assistant to the professor of comparative anatomy at the Museum d'Histoire Naturelle.

[Vol 2]
[Vol 3]
[Vol 4]

VERY SCARCE. This lavishly illustrated and brilliantly written work collects together Cuvier's many separate publications on fossil remains, essentially founding the science of modern paleontology, and greatly advancing the development of comparative anatomy. His presentation of evidence of progressive development he destroyed the view of immutability of speices and contributed to the Darwinian theory of evolution. The *Discours Préliminaire* published in volume one (later published as the much discussed *Discours sur les Révolutions du Globe*) contains the author's famous theory of the remote history of the earth. "In the whole literature of comparative anatomy and paleontology there is scarcely any work that can rank with this great masterpiece" (*Zittel*).

Contents t. 1. Le discours préliminaire. La géographie minéralogique des environs de Paris. – t. 2. Les pachydermes des couches meubles et des terrains d'allurion. – t. 3. Les os fossiles des environs de Paris. – t. 4. Les ruminans, les onguiculés et les reptiles fossiles.

Facsimile reprint, 1969: *Recherches sur les ossemens fossiles de quadrupèdes, ou l'on rétablit les caractères de plusieurs espèces d'animaux que les révolutions du globe paroissent avoir détruites*. Paris, Deterville, 1812. [Bruxelles, Culture et civilisation, 1969]. 4 vols.

Essai sur la Géographie Minéralogique des Environs de Paris, avec une Carte Géognostique, et des Coupes de Terrain. Paris, Baudouin, 1811.

4°: [4], viii, 278 p., 2 folding engraved plates (one hand-colored), one hand-colored folding map of the geology of the basin of Paris. PAGE SIZE: 250 x 195 mm.

RARE. Co-authored with ALEXANDRE BRONIGNART. First published in 1808 in *Annales du Musée d'Histoire Naturelle, Paris*, volume II. This is the work's first appearance in book form, which has been enlarged through the subsequent investigations of both authors. "These two great men not merely marked out the grouping of the formations in a limited tract of country. They established on a basis of accurate observation the principles of palaeontological stratigraphy. They demonstrated the use of fossils for the determination of geological chronology, and they paved the way for the enormous advances which have since been made in this department of science. For these distinguished labours they deserve an honoured place among the founders of geology" (Geikie). Contained in this work is the first really important geological map on the Paris region incl. 11 colours.

1235. 2nd edition, 1822: Description Géologique des environs de Paris. Nouvelle édition dans laquelle on a inséré la descriptions d'un grand nombre de lieux de l'Allemagne, de la Suisse, de l'Italie etc., qui présentent des terrains analogues à ceux du Bassin de Paris. Par M. Alex. Brongniart. Paris, G. Dufour et E. d'Ocagne, 1822.

4°: [4], viii, 428 p., 2 folding engraved maps (one brightly hand-colored geological map of the basin of Paris), 16 lithographed plates (one of which is the hand-colored geological map of the basin of London).

RARE. This edition includes an alphabetical index to all the geological sites around Paris. It is the first French work to adopt the method introduced by William Smith [1769-1839] of determining the respective ages of the rocks by means of the fossils contained in them. Seven plates show fossil shells.

8°: [2], 57, [1] p.

VERY SCARCE. Topographical – Italy – Tuscany – bibliography.

Related work: *Histoire des Progrès de la Géologie de 1834 à 1845*. Paris, Société géologique de France, 1847-1860. 8 vols.

Rare. This work describing the progress of geology from 1834 to 1845 can today still be consulted with profit for the geological historian. Originally it was to consist of four volumes, but D'Archiardi finally gave up writing at volume eight. The work is divided into the following volumes. 1. Cosmogony and géogénie, physique of the earth. 2. Le part.Terrain quaternary or torrential. 2. 2nd share. Tertiary ground. 3. Nummulitic formation. Rocks igneous or pyrogenic of the quaternary and tertiary times. 4. and 5. Cretaceous formation. 6. and 7. Jurassic formation. 8. Triassic formation. Illustrated by 4 plates. These volumes are a remarkable collection of learning that is still highly appreciated by geologists.

D'ARCET

D'ARCET, Jean. (BORN: St. Sèver, Département
Landes, France, 7 September 1725; DIED: Paris, France,
13 February 1801) *French physician & chemist.*

D'Arcet (or Darcet) was a Liège surgeon who became
intested in science, especially chemistry. He was appointed
professor of chemistry at the Collège de France, and became
inspector of the Gobelins' dye works. Eventually he
succeeded P.J. Macquer and became director of the Sèvres
porcelain works.

MEMOIRE, 1766

author here examines the fusibilities of many minerals,
including talc, various carbonates, gypsum, quartz, etc.
The results of these experiments are contained in this
paper, *Mémoire sur l'Action d'un Feu Égal*, which
was in large measure responsible for the growth of the
French glass and pottery industry. D'Arcet in fact was
the first in France to manufacture true porcelain. Also,
contained within in this book, is the author's description
of the combustibility of diamond, and an account of his
classification system of minerals.

RARE. This handbook of pharmacy provides recipes for various remedies and cures against all manner of ailments using prescriptions derived from minerals, vegetables, and animals. The text is divided into four books. The first, "De Mineralogia," (pp. 37-101) treats medicinal waters, minerals and stones. Brief descriptions with supposed curative properties are reported for about 40 species including clay, marl, sulfur, arsenic, bitumen, various salts, magnet, hematite, cinnabar, cobalt, bismuth, antimony, iron, tin, gold, silver, lead, copper, pumice, chrysocolla, carbuncle, lapis lazuli, diamond, talc, selenite, alabaster, Ætite, sardonyx, nephrite, garnet, ruby, amethyst, sapphire, topaz, beryl, emerald, opal, etc. Book two covers "Phytologia" (pp. 102-523) and includes cures derived from corals, fungus, sponges, etc. The third book contains zoology (pp. 524-642), while book four discusses "Anthropologia" (pp. 643-649). An appendix concludes the text. The book was a very popular work going through at least five editions by 1751. Interestingly, it contains the first use of the word Pharmacology, which Dale derived from two Greek

DAMMER

words, Pharmakon and Logos, which mean drug and science, respectively.

2nd edition, 1710: *Pharmacologia, seu, Manuductio ad materiam medicam ...* Iterata editio, emendata & aucta. Londini, Apud Benj. Walford ..., 1710. 12°: A⁶ B-Ee¹² Ff²; 332 leaves.; [12], [1]-652 p.

CONTENTS: [2 pgs], Title page, verso blank.; [1 pgs], Dedication to Hans Sloan, signed Samuel Dale.; [1 pg], Blank.; i-xii, "To The | Reader."; xiii-xxiv, "A | Catalogue | Of | Authors."; 1-255, Text of the history & antiquities.; [256], Blank.; 257-452, "The | Appendix, | Containing | Additions and Emendations."; 453-456, "A | Supplement | To the foregoing | Appendix."; 457-464, "Index."

VERY SCARCE. To this work by Silas Taylor [see note below] on the history and antiquities of Harwich and Dovercourt, Dale has added a long appendix dealing with the natural history of the region, including a study of the mineralogy. In "To The Reader" Dale notes that this is the first printing of Taylor's *History*, which had been written in 1676. Dale then provides a biographical sketch of Taylor's life and continues the book with a bibliography of about 200 works consulted in his notes (about 20 of these are mineralogical in content). The history of Harwich is then presented covering from antiquity through the middle of the 17th century. The text is divided into the five sections of topography, natural history, dynastic history of the town, municipal, political or civil constitution of the town, and historical notes. Dale felt however that Taylor's section on natural history was

somewhat lacking and so he included a long appendix that describes all aspects of the natural history of the area, including its geology and mineralogy. Dale provides descriptions of the fossil shells and teeth, pyrite and quartz crystals found in the area, some of which are pictured on plates 10 to 13.

Silas Taylor. (BORN: Harley, Shropshire, England, 16 July 1624; DIED: Harwick, England, 4 November 1678) *English antiquarian.* Taylor fought on Cromwell's side in the English Civil War, and he was rewarded. However, after the restoration of the King, he lost all that he had gained, but due to obligations owed him by connected persons, he was appointed Keeper of the King's storehouses in Harwick. He was a collector of all objects, especially manuscripts and antiques.

EDWARD S. DANA

DANA, Edward Salisbury. (BORN: New Haven, Connecticut, U.S.A., 16 November 1849; DIED: New Haven, Connecticut, U.S.A., 16 June 1935) *American mineralogist.*

Son of JAMES DWIGHT DANA, Edward was educated at Yale, receiving an A.B., 1870, a M.A., 1874, and a Ph.D., 1876. He did advanced studies at Heidelberg under GOLDSCHMIDT and in Vienna. He was curator of the Yale mineral collection from 1874 to 1922, assistant professor of natural philosophy, 1879 to 90, professor of physics, 1890 to 1917, and professor emeritus from 1917. He followed his father and became an editor of the *American Journal of Science* in 1875. Edward held membership in the National Academy of Science, American Philosophical Society, and the American Academy of Arts and Sciences. He wrote primarily on mineralogy and physics.

Fifth Edition System Appendices

1259. Appendix 2, 1875: Second Appendix | To The | Fifth Edition | Of | Dana's Mineralogy, | By | Edward S. Dana, | Curator Of Mineralogy, Yale College. | Completing The Work To 1875. | New York: | John Wiley & Sons, | 15 Astor Place. | 1875.

8°: [i]-x, [1]-64 p., illus. PAGE SIZE: 232 x 145 mm.

CONTENTS: [i-ii], Title page, verso "Entered according to Act of Congress, in the year 1875, | by J.D. Dana, ..."; [iii], "Prefactory Note."—dated March 1875.; [iv]-vi, "List Of Mineralogical Works."; [vii]-viii, "List Of Mineralogical Memoirs."; [ix]-x, "List Of New Species."; [1]-64, Text.

SCARCE. This second appendix contains descriptions for all minerals proposed as new since the publication in 1872 of the *First Appendix* to Dana's Fifth edition. About 65 were new species.

REFERENCES: NUC: 132, 167-71.

1260. Appendix 3, 1882: Third Appendix | To The | Fifth Edition | Of | Dana's Mineralogy, | By | Edward S. Dana, | Curator Of Mineralogy, Yale College. | Completing The Work To 1882. | New York: | John Wiley & Sons, | 15 Astor Place. | 1882.

8°: [i]-xiii, [1], [1]-134 p., illus.

CONTENTS: [i-ii], Title page, verso "Copyright, | 1882, | By E.S. Dana."; iii, "Prefactory Note."—dated 1 April 1882.; [iv], Blank.; v-x, "Bibliography."; xi-xiii, "Classified List Of New Names."; [1 pg], Blank.; 1-134, Text.

SCARCE. The third appendix prepared to supplement the fifth edition of JAMES D. DANA's *System of Mineralogy* (New York, 1868), and make that work complete up to January, 1882. It contains descriptions for about 300 minerals proposed as new since the publication in 1875 of the *Second Appendix*; however, many of these were incompletely described. The bibliography contains a list of works published since January, 1875.

TEXT-BOOK OF MINERALOGY, 1877

Textbook of Mineralogy

1261. — English, 1877 [First edition].

A Text-Book | Of | Mineralogy. | With An Extended Treatise On | Crystallography And Physical Mineralogy. | By | Edward Salisbury Dana, | Curator Of Mineralogy, Yale College. | On The Plan And With The Co-Operation | Of | Professor James D. Dana. | [rule] | With Upwards Of Eight Hundred Woodcuts And One Colored Plate. | [rule] | New York: | John Wiley & Sons, | 15 Astor Place. | 1877.

DANA

8°: [i]-viii, [2], [1]-485, [1], [1]-15, [1] p., colored frontispiece (showing optical dispersion in crystals). PAGE SIZE: 232 x 140 mm.

CONTENTS: [i-ii], Title page, verso "Copyright By | Edward S. Dana, | 1877."; [iii]-iv, "Preface."—dated 1 March 1877.; [v]-vi, "Table Of Contents."; [vii]-viii, "Introduction."; [1 pg], "Abbreviations Employed In The Description Of Species."; [1 pg], Blank.; [1]-397, Text.; [398], Blank.; [399]-420, "Appendix A. | Synopsis Of Miller's System Of Crystallography."; [421]-430, "Appendix B. | On The Drawing Of Figures Of Crystals."; [431]-446, "Appendix C. | Tables to be used in the Determination Of Minerals."; [447]-476, "Appendix D. | Catalogue Of American Localities Of Minerals."; [477]-485, "General Index."; [1 pg], Blank.; [1]-15, Advertisements for John Wiley and Sons books for sale.; [1 pg], Blank.

SCARCE. Written with the help of JAMES DWIGHT DANA, this work was executed with the science student in mind. One half of the text is occupied with descriptions of crystallography, physical, chemical and determinative mineralogy, while the other half contains the descriptions of species and a catalogue of American mineral localities. The subjects of crystallography and optical mineralogy are treated at length so that the student may acquire the special knowledge needed for complete mineral investigations. For this section fine illustrations and descriptions of the best instruments are given, as well as numerous diagrams and figures of crystals. Descriptive crystallography is covered with sections concerning mathematical crystallography following the systems of Nauman and Miller's. Each of these subjects is also very fully illustrated by figures. In addition, a chapter covering the optical characters of minerals, is among the finest treatments ever printed in the English language. Besides there is a bibliography of the subjects considered under physical mineralogy.

The descriptive mineralogy of the volume follows in essence the classification set forth in James D. Dana's *System of Mineralogy* (5th ed., New York, 1868), and is in fact an abridgement of that work. All new species reported since the publication of the *System* have been included. However, of the species listed, the most common are given lengthy descriptions, while rarer ones are described only briefly. For fuller information, the student is referred to the more comprehensive *System of Mineralogy*.

Other issues: The *Textbook* was immensely popular in American schools of higher education and this first edition was reissued each year from 1877 to 1896, with no major changes to the text.

REFERENCES: *American Journal of Science*: 3rd Series, 13 (1877), 3317 [review]. • NUC: 132, 167-71.

1262. 2nd edition, 1898: A Text-Book | Of | Mineralogy | With An Extended Treatise On | Crystallography And Physical Mineralogy | By | Edward Salisbury Dana | Professor of Physics and Curator Of Mineralogy | Yale University | New Edition, Entirely Rewritten And Enlarged | With nearly 1000 Figures and a Colored Plate | New York | John Wiley & Sons | London: Chapman & Hall, Limited | 1898.

8°: [i]-vii, [1]-593 p., frontispiece (colored), illus., diags. Includes index and bibliography.

SCARCE. The first major revision of the *Textbook*, occurred in 1898 bringing the text up to date and making it a good companion to the author's *System of Mineralogy* (New York, 1892).

Other editions and issues: The second edition of the *Textbook* continued to be very popular in mineralogy classes in colleges and universities throughout America. It was reissued almost every year from its first appearance to 1920. Then, the text was again revised by William E. Ford, and published as a "Third Edition" in 1922 (8°: ix, 720 p., illus., diags.) and in 1932 as a "Fourth Edition" (8°: [4], iii-xi, 851 p., illus., diags.) when Ford did his last revision.

SYSTEM OF MINERALOGY, 1892

System of Mineralogy

1263. — English, 1892 [First issue].

The System | of | Mineralogy | of | James Dwight Dana | 1837—1868 | [rule] | Descriptive Mineralogy | Sixth Edition | by | Edward Salisbury Dana | Professor Of Physics And Curator Of The Mineral Collection, Yale University | Entirely Rewritten And Much Enlarged | Illustrated with over 1400 figures | [rule] | "Hæc studia nobiscum peregrinantur—rusticantur" | [rule] | First Thousand | New York | John Wiley & Sons, Publishers | 53 East Tenth Street | 1892.

4°: [i]-lxiii, [1], [1]-1,134 p., over 1,400 illus., biblio., index. PAGE SIZE: 260 x 165 mm.

CONTENTS: [i-ii], Title page, verso "Copyright, 1892, | By | Edward S. Dana."; iii-x, "Preface."; xi-xii, "Table of Contents."; xiii-lxii, "Introduction."; [1 pg], Blank.; [1]-1024, Descriptive mineralogy.; 1025-1052, "Supplement.";

1053-1104, "Catalogue Of American Localities Of Minerals."; 1105-1134, "Index To Species."

SCARCE. Often called the sixth edition of Dana, this book was at its publication the single most comprehensive mineralogy treatise ever published and the measure to which many subsequent works would be compared. As the author states in the preface, in the twenty-four years since the appearance of the previous edition, the science of mineralogy had made rapid progress. This was evident in the many new periodicals and journals recently founded that were devoted in whole or in part to mineralogical pursuits, and the nearly one thousand new mineral species added to this edition of the *System*.

Edward erected this comprehensive work on the solid foundation of the fifth edition of the *System* (New York, 1868), written by his father, JAMES DWIGHT DANA and GEORGE JARVIS BRUSH. From there he added all the latest knowledge about species and mineralogical investigation, and created a mineralogical reference that rarely was supplanted by other works. In fact, the larger page format allowed Dana to increase the amount of text by about a third over the previous edition. It was the best mineralogical work published since the inception of the science and soon became a standard in every library and geological department throughout America and Europe. However, it was the comprehensive nature that created its downfall. The science was rapidly changing because new technologies were adding new mineral species and invalidating many others. Although several appendices were published to keep this massive and at the time unique reference up to date [which see below], this reference became outdated by the rapid progress of the science.

The introduction begins by listing the form each mineral species description will take. This is followed by comprehensive reviews of crystallography, physical mineralogy, chemical mineralogy, and nomenclature. The introduction concludes with an extensive and important bibliography of mineralogy and crystallography [pp. xlv-lxi]. The descriptive mineralogy then commences. For each mineral, comprehensive details are given about the name and variants, its first description, the crystalline form and structure, the physical characters such as hardness, specific gravity, optics, taste and odor, the chemical composition, the pyrognostic (blow-pipe analyses), the occurrences and associated minerals, alteration forms, artificial production, and references.

Other issues: The *System* was very popular. The second printing declaring "Second Thousand" on the title page appeared in 1893. Consequently, the text was issued many times over the next years. Like the previous fifth edition, three appendices were written in an attempt to keep the text up to date. They appeared in 1899, 1909 and 1915 [see their descriptions below]. Although these appendices were bound and sold separately, in some cases they were also bound up at the end of the sixth edition's text, creating a comprehensive, though bulky book. The last such issue was c1937. The following list provides the first year and make up of these issues.

- 1899, bound with 1 appendix.
- 1909, bound with 2 appendices.
- 1915, bound with 3 appendices.

Sixth Edition System Appendices

1264. Appendix 1, 1899: First Appendix | To The | Sixth Edition | Of | Dana's System Of Mineralogy | By | Edward S. Dana | Professor Of Physics And Curator Of Mineralogy Yale University | Completing the Work to 1899 | New York | John Wiley & Sons | London: Chapman & Hall, Limited | 1899.

8°: [i]-x, [1]-75, [1] p. PAGE SIZE: 260 x 166 mm.

CONTENTS: [i-ii], Title page, verso "Copyright, 1899, | By | Edward S. Dana."; iii, "Prefatory Note."; [iv], Blank.; v-vi, "Bibliography."; vii-x, "Classified List Of New Names."; [1]-75, Text.; [1 pg], Blank.

SCARCE. All new minerals described between 1892 and 1899 are included. Of these, about forty were new species.

REFERENCES: NUC: 132, 167-71.

1265. Appendix 2, 1909: Second Appendix | To The | Sixth Edition | Of | Dana's System Of Mineralogy | By | Edward S. Dana | Professor Of Physics And Curator Of Mineralogy, Yale University | And | William E. Ford | Assistant Professor Of Mineralogy, Sheffield Scientific School Of | Yale University | Completing the Work to 1909 | New York | John Wiley & Sons | London: Chapman & Hall, Limited | 1909.

8°: [2], [i]-xi, [1], 1-114 p., biblio., illus. PAGE SIZE: 260 x 165 mm.

CONTENTS: [1 pg], Blank.; [1 pg], Publisher's list of works concerning Dana's Mineralogies.; [i-ii], Title page, verso "Copyright, 1909, | By | Edward S. Dana. | ..."; iii, "Prefatory Note."—dated 1 July 1909.; [iv], Blank.; v-vi, "Bibliography."; vii-xi, "Classified List Of New Names."; [1 pg], Blank.; 1-114, "Appendix II."

SCARCE. Co-authored by WILLIAM EBENEZER FORD. All new minerals described between 1899 and 1909 are included. Of these about sixty are new species.

REFERENCES: NUC: 132, 167-71.

Third Appendix to the Sixth Edition of Dana's System of Mineralogy. By William E. Ford ... Completing the Work to 1915. (New York, 1915).

See: Ford, William Ebenezer.

1266. — English, 1893.

Catalogue | Of | American Localities | Of | Minerals. | By | Edward Salisbury Dana, | Professor Of Physics And Curator Of The Mineral Collection, Yale University. | Reprinted From The Sixth Edition | Of | Dana's System Of Mineralogy. | New York: | John Wiley & Sons. | London: Chapman & Hall, Limited. | 1893.

8°: [6], [1]-51, [1] p. PAGE SIZE: 260 x 174 mm.

CONTENTS: [2 pgs], Title page, verso "Copyright by | Edward S. Dana. | 1893."; [1 pg], "Preface."; [1 pg], Blank.; [1 pg], "Index of States and Territories."; [1 pg], Blank.; [1]-51, Text.; [1 pg], Blank.

VERY SCARCE. At the end of his *System of Mineralogy*, Edward Dana included a list of states and territories with locations where specific mineral species had been found in The United States. It was intended to aid the mineral collector in selecting routes and arranging collecting trips. Apparently, this section was popular enough that the publisher ultimately issued it separately in 1893. Compared to the first American descriptions of a few minerals to be found in Thomas Harriot's *A Brief and True Report of the New Found*

DANA

Land of Virginia (1st ed., London, 1588), Dana's *Catalogue* shows a multifold increase.

Minerals

1267. — English, 1895 [First edition].

Minerals, | and | How To Study Them. | A Book For Beginners In Mineralogy. | By | Edward Salisbury Dana, | [...3 lines of titles and memberships...] | With more than 300 Illustrations. | First Edition | New York | John Wiley & Sons, Inc. | London: Chapman & Hall, Limited.

12°: [i]-vi, [1]-380 p., frontispiece, 319 illus., diags. PAGE SIZE: 180 x 124 mm.

CONTENTS: [Frontispiece: Quartz crystal from North Carolina]; [i-ii], Title page, verso copyright information.; iii-iv, "Preface."—dated 1 July 1895.; v-vi, "Table Of Contents."; [1]-364, Text.; 365-367, "Appendix."; [368], Blank.; 369-372, "General Index."; 378-380, "Index To Mineral Species."

SCARCE. A small, popular work on elementary mineralogy, the purpose of which was to teach in a self paced manner, individuals interested in the science of mineralogy. The essential elements of the science are given in a concise and clear language that is informative and easy to read. Interesting photos and other illustrations enhance the text.

The first part of the text covers basic introductions to crystallography and the seven crystal systems, physical properties of minerals, like fracture, cleavage, color, and transparency, chemical characters and the use of the blowpipe. A basic descriptive mineralogy occupies most of the second half of the book with the minerals selected being collector species. A section at the end describes the determination of an unknown mineral.

SCARCE. That this work was popular is evident by the fact that this second issue of one thousand copies appeared a year after the original issue of 1892.

JAMES DWIGHT DANA

REFERENCES: Hoover Collection: no. 248 [1904 edition].

DANA, James Dwight. (BORN: Utica, New York, U.S.A., 2 February 1813; DIED: New Haven, Connecticut, U.S.A., 14 April 1895) *American mineralogist & geologist.*

Dana was born into a merchant's family of modest means. Through determination and a zeal for learning he was able to enter Yale college where he came under the influence of Benjamin Silliman, professor of chemistry. It was this close association that nurtured Dana's interest in natural history and most particularly mineralogy and geology. Upon his graduation from Yale in 1833, Dana accepted the post of instructor to midshipmen aboard the U.S.S. Delaware. In 1836, two years after his return home, Silliman was able to offer Dana an assistant-ship in the chemical laboratory at Yale. In this position, Dana made many scientific contacts and doubtless this led to an invitation to join the Wilkes expedition of 1838-1842. This enterprise is one of the great episodes in the history of American science. The purpose was to circumnavigate the globe, charting and conducting natural history surveys in Polynesia and confirming the existence of the Antarctic continent. Dana shipped out as a geologist, and when the expedition's conchologist was dismissed at Sydney, Dana took on the role of marine biologist as well. For four years the world was his laboratory, an experience that gave "Dana a competence in natural history matched in his own day only by Darwin's on the *Beagle*" [DSB]. Upon his return to New Haven, Dana commenced publishing his observations made on this remarkable voyage. This appeared as *Zoöphytes, Crustacea and Geology*, a work that although very specialized was none the less very popular reading among the general public. His global experience also gave great merit to his arguments in support of Darwin's theory of evolution. When a position opened, he was made professor of mineralogy and geology at Yale. In 1844, Dana married Henriette Frances Silliman [1823-1907], daughter of his Yale collaborator, Benjamin Silliman.

Together they had four children, one of whom, EDWARD SALISBURY DANA also became a renowned mineralogist. Subsequently, James Dwight Dana became editor of the *American Journal of Science*, which had been founded by Silliman in 1818. Through this oracle, as well as teachings, many articles and books, Dana devoted his life to the expansion of scientific knowledge. Dana held membership in every important scientific throughout the world. He was the recipient of both the Copley Medal (Royal Society of London) and the Wollaston Medal (Geological Society of London), a feat few others have accomplished. In 1866, the silicate mineral "Danalite" was named in his honor by J.P. Cooke.

System of Mineralogy

1273. — English, 1837 [First edition].

A | System Of Mineralogy: | Including An Extended | Treatise On Crystallography: | With An Appendix, Containing The | Application Of Mathematics | To | Crystallographic Investigation, | And A | Mineralogical Bibliography. | With Two Hundred And Fifty Wood Cuts, And Four Copper Plates, Containing One | Hundred And Fifty Additional Figures. | By James Dwight Dana, A.M. | [...4 lines of titles and memberships...] | [rule] | "Hæc studia nobiscum peregrinantur, rusticantur." | [rule] | New Haven: | Published By Durrie & Peck and Herrick & Noyes. | Hitchcock & stafford, Printers. | [rule] | 1837.

8° in 4s: π^3 B⁴ 1-18⁴ 19*⁴ 19-56⁴ 57² χ^4 App.-B-App.-O⁴: 297 ℓ .; [i]-xiv, 1-144, *145-152*, [145]-452, [1]-119, [1] errata p., 4 folding plates, about 250 text woodcuts, biblio., index. PAGE SIZE: 224 x 138 mm.

SYSTEM OF MINERALOGY, 1837

CONTENTS: [i-ii], Title page, verso "[rule] | Entered, | According to Act of Congress, in the year 1837, by | Durrie & Peck and Herrick & Noyes, | ..."; [iii]-vi, "Preface."—dated 1 May 1837.; [vii]-xiv, "Contents."; [1]-4, "Introduction."; [5]-70, "Mineralogy. | [rule] | Part I. | Crystallography. | Or, The Science Of The Structure Of Minerals."; [71]-86, "Part II. | Physical Properties Of Minerals."; [87]-91, "Part III. | Chemical Properties Of Minerals."; [92]-104, "Part IV. | Taxonomy."; [105]-152*, "Part V. | Determinative Mineralogy."; [145]-444, "Part VI. | Descriptive Mineralogy."; [445]-452, "Supplement."; [1]-80, "Appendix A. | Mathematical Crystallography."; [81]-88, "Appendix B. | Chemical Classification."; [89]-106, "Catalogue | Of | Works On Mineralogy."; [107]-119, "Index."; [1 pg], "Errata."; [At end], Four plates.

VERY SCARCE. One of the most significant contributions to American mineralogy and the science as a whole was made when Dana, at the youthful age of 24 published his *System of Mineralogy*. Benjamin Silliman reviewing the work, wrote: "On the whole, we believe this to be decidedly among the best treatises upon this subject that have ever been circulated in the United States, and we are of the opinion that even a slight examination of it, will be sufficient to commend it to the favor of every cultivator and lover of mineralogy." The text is a very complete and readable compendium of all mineralogical data available to that time. Thus this book is a fitting first entry into an extraordinary publishing history that would see the *System's* fourth edition define modern systematic mineralogy and see the *System's* sixth edition become arguably the greatest mineralogy ever published as a single volume.

The body of the text is divided into six distinct parts. Part I, titled "Crystallography" treats all manner of crystallographic subjects including primitive forms, systems of crystallization, nomenclature, and notation for lettering crystal drawings. A section on the theoretical aspects of crystals begins with a brief history of the science, after which Dana unfolds his own original views about the internal structure of crystals. A brief chapter on the practical aspects of "Crystallogeny" concludes this section. Part II, treats the physical characters of minerals. These include light, electricity, magnetism, specific gravity, hardness, type of fracture, color, and odor. Part III, which purportedly covers the chemical properties of minerals in essence only contains directions for the use of acids and the application of the blowpipe. In 1837, with a flood of data becoming available about the chemistry of minerals, it is surprising that more is not written about that topic in this work. Part IV treats the classification and nomenclature of minerals. Within this exposition are discussed the relative importance of crystallographic, physical and chemical properties in identifying a mineral species. Dana also discusses in detail the classes and orders of his natural classification, for which genera and species are described in the sixth section. Part V, "Determinative Mineralogy" contains two tabular classifications the objective of which is to enable the unaided student to arrive at the correct name of a mineral. The first table is arranged according to the system of crystallization as described in part I. The second table, independent of crystallographic data, distributes the minerals according to metallic or nonmetallic luster and their colored or uncolored streak. The species in these subdivisions are then arranged in the order of their hardness.

The largest portion of the book is devoted to part VI, "Descriptive Mineralogy." This portion relies very heavily upon the system and information contained in FREDRICH MOHS *Grundriß der Mineralogie* (2 vols., Dresden, 1822-24; English transl., 3 vols., Edinburgh, 1825). It begins with a tabular view of the natural classification that lists the mineral species under the appropriate class and order. Next comes the detailed description of the species, with information on synonyms, nomenclature, crystallization, localities with particular attention paid to American occurrences, and references to the mineralogical literature. Appendix A titled "Mathematical Crystallography" begins with the basics of geometry and relates this study of points, lines and planes to its practical application in crystallography. Appendix B gives brief remarks on the chemical classification of minerals. An important though error riddled mineralogical bibliography follows the appendices. A good general index and an errata page conclude the work. Through out the book and on four copper plates are figured over 250 woodcut crystal figures.

VERY SCARCE. The *System's* first edition of 1837 had sold out by 1842. A new edition had to be prepared and for this Dana retained the original format and updated the text with the latest discoveries. This increased the size of the work only slightly. The long appendix on "Mathematical Crystallography" was dropped in most copies. However, the most important change was in the appendix dealing with chemical classification. It has been increased from 6 to 23 pages and it now includes a chemical formula for each species. Strangely, chemistry is omitted from the descriptive part. Also introduced in the second edition and a part of all subsequent nineteenth century editions was a "Catalogue of American Localities of Minerals." The first one ran to 13 pages and included localities in 25 states.

This edition was published by Wiley and Putnam as the "Second Edition" in 1844. A note in the preface to the fifth edition of Dana's *System* (New York, 1868) says it: "This edition, failing to find a publisher in New York, was printed at the expense of the author." However, this appears to have been a misstatement. In the early 1840s, Dana was not in a position to finance the publication of the second edition. Instead, Dana might have misremembered the circumstances. He did finance the reprinting of an 80 page mathematical appendix that had appeared in the 1837 edition, and had it bound up in a very few copies of the second edition of the *System*. Mention of this is made in the *American Journal of Science* review: "The mathematical appendix of the first edition is omitted in most of the present one; only a few are bound up with it for the satisfaction of those who wish to pursue that portion of the subject." The expanded work is otherwise identical to the more common issue, which is described above.

SCARCE. This, the third edition of the *System*, is a transitional work, clearly marking the end to the eighteenth century ideas that relied on a "natural history" method to organize mineral species, and bringing to light the use of chemistry in a modern classification scheme. Not beating around the bush, Dana announced this break in his preface: "To change is always seeming fickleness. But not to change with the advance of the science, is worse; it is persistence in error; and therefore, notwithstanding the former adoption of what has been called the "Natural History System," and the pledge to its support given by the author, in supplying it with a Latin Nomenclature, the whole system, its classes, orders, genera, and Latin names, have been rejected; and even the trace of it, which the synonymy might perhaps rightly bear, has been discarded."

This cleared the slate for another classification, which would rely heavily on a mineral's chemistry for ordering the species. Dana was well aware of the difficulties this approach would involve in the middle of the nineteenth century, but he also realized that a better correlation of chemistry and crystallography soon would be possible. Therefore, he offered his new classification "simply as a convenient arrangement."

In accord with this fundamental revision, Dana made many other changes. Chemical formulas, derived principally from the work of Rammelsberg, were included in each of the species descriptions. The crystallization descriptions based on Haiüy were removed, although the Naumann indices remained, as did the stated crystal system. The extensive mineralogical bibliographies found in the first and second editions was replaced by a short list of major works in the subject. But some references to the original literature was still included in the species descriptions. Reading the text, it is clear that Dana had not yet settled in his own mind all the points of this new method, but the basic foundation was laid in this work.

Supplements: Published in the *American Journal of Science*, 2nd Series were separate "Mineralogical Notices" that supplemented the text of the third edition. The following list provides details.

SCARCE. Four years after the appearance of the prior edition, the fourth edition of the *System* was published. In it, Dana introduces the classification of minerals which in its major divisions is followed to this day, and is commemorated with the description, "Dana Classification." It is based upon a combination of chemical and crystallographic information, with the major divisions of species determined by their chemistry, while ordering within these divisions is determined either by isomorphism or similarity of chemical formula or both.

As a necessary component of this system, the crystallographic descriptions have been overhauled. Although Naumann indices for crystal forms were mentioned in the previous editions, the method of designating forms by indices was not employed in the mineral descriptions. In this edition for the first time, Dana has included extensive information on the forms of crystals. For species rich in crystal forms, a diagrammatic summary of the observed forms is provided.

Also included in the descriptions were extensive chemical information. Much of this data was based upon the studies of Rammelsberg's *Handwörterbuch des chemischen Theils der Mineralogie* (Berlin, 1841; 5 supplements, 1843-1851), but, the chemical studies of Dana, Genth, and Shepard can also be found in the mineral descriptions.

Other issues: The work was reissued in 1855 and 1858 with no changes to the text.

Supplements: There appeared in the *American Journal of Science, 2nd Series* a series of supplements to augment the fourth edition's text. So far as is known, they were never published separately. The following list provides details.

19 (1855), pp. 353-371

SCARCE. Assisted by GEORGE JARVIS BRUSH with regards to the blow pipe characteristics, the fifth edition of the *System* has a form that is familiar to present day

mineralogists. The previous editions had included an extensive introduction describing the various phases of mineralogical and crystallographic science in addition to the descriptive mineralogy. In the fifth edition all but the descriptive part was dropped and this was provided with only a short introduction designed to aid the descriptive part. This had now grown to 805 pages, three times the length of the first edition published only 31 years earlier.

In addition to fundamentally changing the character of the work, many improvements were made in the mineral descriptions. The number of references to the original literature was greatly increased, while the bibliography in the introduction was enlarged. For the first time, optical data was included in the mineral descriptions, but was limited to statements of orientation, optic sign and birefringence, but no indices of refraction were given.

The publication of the fifth edition marked the end of James Dana's active connection with the *System*. The first appendix was brought out in 1872 by Brush. It covered the progress of mineralogy from 1868 to 1872, but was not considered to be up to the standard set by the text of the fifth edition. Dana's son, Edward took over the management of the remaining appendices, and the *System* as a whole in 1875.

Other issues: The fifth edition of the *System* was reissued more than a dozen times. In fact, the appearance of the three separate appendices allowed the publisher to bind them with the text and reissue the combined work with an updated title page. This update usually consisted of placing the term "Sub-Edition" on the title, but with the pending publication of the sixth edition of the *System* in 1892, "Fifth Edition" was replaced with ever higher numbering in an effort to entice customers to purchase the remaining stock of what would soon be an obsolete text. The following list indicates the year of issue and the sub-edition number if any.

1869

1870

1872

1874, 5th sub-edition, with 1 appendix.

1875, 6th sub-edition, with 1 appendix.

1877, 7th sub-edition, with 2 appendices.

1880, 8th sub-edition, with 2 appendices.

1882, 9th sub-edition, with 2 appendices.

1883, 10th sub-edition, with 3 appendices.

1885, 11th sub-edition, with 3 appendices, also called the 7th edition on the title page.

1888, 11th sub-edition, with 3 appendices, also called the 8th edition on the title page.

1889, 11th sub-edition, with 3 appendices, also called the 9th edition on the title page.

1890, 11th sub-edition, with 3 appendices, also called the 11th edition on the title page.

The Natural Classification of Minerals, reprinted from Dana's Mineralogy, and designed to answer the purpose of Labels for Cabinets. Published at Neely's Schoolbook Warehouse, and Mineralogical Depot, 221 Bleeker – Street, New York, 1842.

8°: 58ℓ. PAGE SIZE: 165 x 95 mm.

VERY RARE. Another of those curious works designed to be destroyed by the purchaser in labeling his mineral collection. It lists by number Dana's mineral species, following the natural history classification and nomenclature utilized in the first edition of his *System of Mineralogy* (New Haven, 1837). For each mineral the class, order, genus, and species are given in Latin. The text is printed on only one side of the paper and is widely separated vertically to allow buyers of the book to clip out the separate entries as labels for their specimens.

MANUAL OF MINERALOGY, 1848

Manual of Mineralogy

1279. — English, 1848 [First edition].

Manual | Of | Mineralogy, | including | Observations On Mines, Rocks, | Reduction Of Ores, | and the | Applications Of The Science To The Arts. | With 260 Illustrations. | Designed For The Use Of Schools And Colleges. | [ornate rule] | By James D. Dana, A.M., | [...3 lines of titles and memberships...] | [ornate rule] | New Haven: | Published By Durrie & Peck. | [rule] | 1848.

12°: [i]-xii, 13-430 p., 260 illus., diagrs.

CONTENTS: [i-ii], Title page, verso "Entered according to Act of Congress, in the year 1848, by | Durrie & Peck | ..."; [iii]-iv, "Preface."; [v]-vi, "Table Of Contents."; [vii]-xii, "Glossary & Index Of Terms."; [13]-387, Text.; [388]-414, Tables for the determination of minerals.; [415]-430, "Index."

VERY SCARCE. This volume was designed as a textbook for practical mineralogy, aimed especially at American students. Its first pages treat the mineralogical science with regard to physical and chemical characters. Following this are the descriptions of the mineral species. All American minerals and other species considered important are described, while rarer species are set in smaller type and only briefly noticed. The arrangement adopted, places the ores of the same metal together. The descriptions of the ores of a metal are preceded by a paragraph giving brief general remarks about their characteristics. Information is provided about assay and reduction, the uses of the metal, and facts of a historical and statistical nature. At the end of the text are chapters on rocks, a catalogue of American localities of minerals, a table of weights, measures and coins, and a table for the determination of minerals. For more detailed information on the localities of minerals and their associations, the reader is directed to the author's comprehensive, *System of Mineralogy* (2nd ed., New York, 1844), which contains full lists of synonyms, complete tables for the determination of minerals, a more complete crystallography, and numerous chemical analyses with their authorities.

Of particular interest in this volume is the classification scheme. The first and second edition of Dana's *System of Mineralogy* (1837 & 1844) had used a natural history method, yet the classification adopted in the *Manual* "throws together ores of the same metals, and associates the earthy species as far as possible in natural groups." Dana writes that he chose this method because "this order is preferred by very many teachers of science, and has advantages which for many purposes counterbalance those of a more perfectly natural system." It is here in the *Manual* then that Dana first breaks away from the prevailing natural history classification systems of mineralogy and begins to develop a chemically based one. Dana would switch to a system based solely on chemistry in the fourth edition of his *System* (New York, 1854), and rewrite mineral classification to the present time.

Other issues: The discovery of gold in California in 1849 caused the *Manual* to be in great demand. Many a

"forty-niner" carried a copy of Dana's *Manual* in their trek to the California and Colorado gold fields. Subsequently, many reissues of the work appeared. The first was in 1849, which although the title page calls it a "Second edition," it is in fact a reissue of the first edition with the same pagination as the first. These reissues with modified title pages (title editions) also occurred in 1850 ("Third edition"), 1851 ("Fourth edition"), 1853 ("Fifth edition"), 1854 ("Sixth edition"), and 1855 ("Seventh edition").

CONTENTS: [i-ii], Title page, verso "Entered according to Act of Congress, in the year 1857, ..."; [iii]-iv, Preface to the first and second editions; [v]-vi, "Table Of Contents."; [vii]-xii, "Glossary And Index Of Terms."; [1]-413, Text.; [414]-440, "Tables for the Determination of | Minerals."; [441]-454, [2], "Index."

SCARCE. Due to the great demand for the book, Dana prepared a "New Edition, Revised and Enlarged" that first appeared in 1857. The text was increased by 22 pages mostly dealing with minerals of economic importance, but especially gold and its mineral associations. This "New Edition", which became a standard in schools in The United States, was then reissued with little or no alteration to the text each year from 1858 until 1876.

REFERENCES: NUC: 132, 180-90.

1281. 3rd Text Revision, 1878: Manual of mineralogy and lithology containing the elements of the science of minerals and rocks. For the use of the practical mineralogist and geologist, and for instruction in schools and colleges. By James D. Dana. Third edition, rearranged and rewritten. New York, J. Wiley & Sons, 1878.

8°: viii, 474 p., illus., diagrs.

SCARCE. This is the third major revision of the basic book that Dana made. The book declares this on the title page with "Rearranged and Rewritten" and correctly calls it the "Third edition." Included was an extensive chapter on rocks (showing the rise in the science of petrology), and the title was changed to *Manual of Mineralogy and Lithology*. As before, the work became popular in classrooms throughout the United States and consequently the book was reissued each year from 1879 through 1886, with varying "Editions" mentioned on the title page.

Determination of Minerals."; [434]-495, "On Rocks.—Petrology."; 495-496, "Academy Mineral Collection."; 497-517, "General Index."; [1 pg], Blank.

SCARCE. In 1887, Dana made his fourth thorough revision of the text bringing it current to 1886, which was

reflected with the book being called the "Fourth Edition, Revised throughout and Enlarged." As with the other editions, this volume was aimed toward the needs of miners and practical mineralogists by placing together the ores of the same metal. Reissues of this text with varying edition information printed on the title pages occurred in 1887 ("Fifth edition"), 1888 ("Sixth edition"), 1889 ("Seventh edition"), 1890 ("Ninth edition"), 1891 ("10th ed."), 1891 ("11th ed."), and 1894-1909 ("12th ed.").

Dana, A.M. | [rule] | "Hæc studia nobiscum peregrinantur, rusticantur." | [rule] | Second Edition. | New York And London: | Published By Wiley & Putnam. | [rule] | 1844.

8° in 4s: [1]-633, [1] blank, [1]-80, [1] errata, [1] blank p., index, biblio., 4 plates (2 folding). PAGE SIZE: 222 x 138 mm.

CONTENTS: [1-2], Half title page, "????", verso blank.; [3-4], Title page, verso "Entered | according to Act of Congress, in the year 1844, by | ..."; [5], Dedication to Benjamin Silliman.; [6], Blank.; [7]-10, "Preface."—dated March 1844.; [11]-14, Contents.; [15], "Abbreviations In Names Of Authors."; [16], Blank.; [17]-20, "Introduction."; [21]-101, "Mineralogy. | [ornate rule] | Part I. | Crystallology, or The Science Of The Structure Of Minerals."; [102]-117, "Part II. | Physical Properties Of Minerals."; [118]-136, "Part III. | Chemical Properties Of Minerals."; [137]-188, "Part V. | Determinative Mineralogy."; [189]-534, "Part VI. | Descriptive Mineralogy."; [535]-548, "Catalogue | Of | American Localities Of Minerals."; [549]-576, "Part VII. | Chemical Classification."; [577]-593, "Part VIII. | Rocks Or Mineral Aggregates."; [594]-616, "Part IX. | Mineralogical Bibliography."; [617]-618, "Addenda."; [619]-633, "Index."; [1 page], Blank.; [1]-80, "Appendix A. | Mathematical Crystallography."; [1 page], "Errata."; [1 page], Blank.; [At end], Four plates.

VERY SCARCE. This is the rare second issue, where the 80 page mathematical appendix that was issued with the first edition of 1837 has been bound up with the text of this edition. Mention of this is made in the AJS review: "The mathematical appendix of the first edition is omitted in most of the present one; only a few are bound up with it for the satisfaction of those who wish to pursue that portion of the subject." The work

is otherwise identical to the more common issue, which for a description see the above item.

DANA, James Freeman. (BORN: Amherst, New Hampshire, U.S.A., 23 September 1793; DIED: New York, New York, U.S.A., 14 April 1827) *American mineralogist & chemist.*

In 1809, when Dana entered Harvard, he was particularly interested in natural history and already advanced in his chemical studies. During his student years and after his graduation in 1813, he was regarded as a superlative chemist and mineralogist. Consequently, Dana was regularly asked to analyze minerals and devise particular tests. In 1815 he received the Boylston prize for an essay on tests for arsenic. In 1815, Harvard sent Dana to England as a purchasing agent for chemical apparatus. While there, he studied for several months under FREDRICH ACCUM. Returning in 1816, he was appointed to supervise the renovation of Harvard's laboratory. In 1817, Dana completed advanced studies and received an M.D. from Harvard. Subsequently, he was hired by Harvard as an instructor. In 1826, Dana moved to New York to become professor of chemistry at the College of Physicians and Surgeons. He died suddenly at the early age of 33.

OUTLINES OF THE MINERALOGY, 1818

DAUBENTON

1299. — English, 1818.

Outlines | of the | Mineralogy And Geology | of | Boston And Its Vicinity, | with a | Geological Map. | [double rule] | By | J. Freeman Dana, M.D. | and | Samuel L. Dana, M.D. | Fellows Of The Linnæan Society Of New England. | [double rule] | “Facta non verba.” | “Ornari res ipsa negta-” | [double rule] | Boston: | Published By Cummings And Hilliard, No. 1 Cornhill. | [ornate rule] | University Press ... Hilliard and Metcalf. | 1818.

4°: π^6 3-144; 54ℓ.; [1]-108 p., folding hand-colored map. PAGE SIZE: 262 x 154 mm. uncut.

CONTENTS: [Facing the title page is a hand-colored, folding map, 340 x 390mm., titled: “A | Geological Map | of | Boston | and its | Vicinity | Engraved for Danas’ Outlines of the | Mineralogy and Geology of Boston,” by Annin & Smith.; [1-2], Title page, verso “District Of Massachusetts, To Wit: | ...”; [3]-5, “Preliminary Observations.”—signed J.F.D. [James Freeman Dana] and S.L.D. [Samuel Luther Dana], 10 August 1818.; [6], Blank.; [7], “A List of the Authors and Editions of the Works consulted in preparing | the following pages.”; [8], Blank.; [9]-19, “Tabular View | of the minerals described in the work.”; [20]-75, Descriptive mineralogy.; [76], Blank.; [77], “Geology | Of | Boston And Its Vicinity.”; [78]-97, Description of various rock types found.; [98]-105, “Description Of The Map.”; [106]-108, “A Short Vocabulary | Of | Mineralogical Terms.”

VERY SCARCE. Co-authored with Samuel Luther Dana [see note below], this early American topographical mineralogy is a reset, reissue of a work that first appeared in *Memoires of the American Academy of Arts and Sciences, Boston* (see, 4 1818, 129-224). The Danas provide in this work a detailed and comprehensive introduction to the geology and mineralogy of the Boston area. The authors describe their reasons for writing the book thusly: “It is a common remark, that the vicinity of Boston is no field for the mineralogist. To this opinion we must ascribe the coldness and indifference, with which mineralogy is here treated. On great object which we have had in view, in preparing the following work, has been, to induce an examination of this opinion. It will be found, that more than forty simple minerals, and several rocks occur within a few miles of Boston; and that, if we cannot boast the fertility and variety of mining districts, we may reap a richer harvest, than can be gathered in many portions of our country.”

The Danas’ account of the mineralogy and geology of Boston and vicinity grouped the minerals into four classes: earthy fossils, saline fossils, inflammable substances and metallic fossils. Among the species identified were lime, quartz, mica, feldspar, basalt, garnet, epidote, asbestos, chlorite, clay, and ores of copper, lead, iron, manganese. Each mineral is given a concise description and locality. Although it is clear from the text that the Danas understood the difference between rocks and minerals, they followed the practice of the time and included the rocks and soils with in the mineral classification. A section on the geology of the area, which faithfully follows Werner, has an

accompanying a remarkably accurate map of Boston and its vicinity, indicating in color the surface location of various rock types.

Samuel Luther Dana. (BORN: Amherst, New Hampshire, U.S.A., 11 July 1795; DIED: Lowell, Massachusetts, U.S.A., 11 March 1868) *American physician.* Dana was the son of a merchant and sea captain and brother of James Freeman Dana. He attended Harvard, receiving his M.D. in 1818. He opened a medical practice, but gave it up in 1826 to concentrate on the manufacture of sulphuric acid and bleaching salts. From 1830 to 1840, he was associated with the geological surveys of Massachusetts under Edward Hitchcock. Dana was considered a leading American authority on technical and agricultural chemistry.

DAUBENTON

DAUBENTON, Louis-Jean-Marie. (BORN: Montbard, Côte d’Or, France, 29 May 1716; DIED: Paris, France, 1 January 1800) *French physician, anatomist & mineralogist.*

Daubenton was sent to Paris to study theology, but he preferred medicine. After receiving his M.D. in 1741, he intended to return to his birth city to open a practice; however, Buffon, a school mate from his hometown, engaged Daubenton to assist him at the Jardin du Roi in Paris and his projected scientific works. In 1745, he was appointed curator and demonstrator at the cabinet of natural history. In 1778, he was appointed to a chair in natural history at the College de France. For the fifty years he was in charge of the cabinet of natural history, he made a great many improvements. When the Jardin du Roi was converted to a school in 1794, Daubenton was appointed professor of mineralogy.

TABLEAU, 1784

1300. — French, 1784 [First edition].

Tableau | Méthodique | Des Minéraux, | Suivant
Leurs Différentes Natures, | Et avec des caractères
distinctifs, apparens ou | faciles à reconnoître. |
[triple rule] | Premier Ordre. | Sables, Terres Et
Pierres. | Ces substances ne fondent pas dans
l'eau comme les | sels, ne brûlent pas comme les
substances combusti- | bles, & n'ont pas l'éclat des
matières métalliques. | ...

8°: A-D⁸ E⁴; 36ℓ.; [1]-36ℓ., printed on recto
side only. COLOPHON, leaf 35, reads: "A Paris, |
Chez Demonville, Imprimeur de l'Académie Française,
| rue Christine; Pierres, Imprimeur du Roi, rue Saint |
Jacques; Debure l'aîné; Didot le Jeune; Gogué & | Née
de la Rochelle, quai des Augustins. | [rule] | M. DCC.
LXXXIV. | Sous les Privileges de l'Académie Royale
des Sciences & du | Collège Royal de France." PAGE
SIZE: 198 x 122 mm.

CONTENTS: [ℓ. 1/=A1], Title page, verso blank.; ℓ. 2-
ℓ. 34/A2r-E2r, Text.; ℓ. 35-ℓ. 36/E3r-E4r, Colophon and
"Avertissement."

RARE. As we learn from the 'Avertissement',
these tables were exhibited in manuscript form during

Daubenton's lectures in 1779 and were printed on rectos
only so that they could be mounted on canvas. They
were used to clarify Daubenton's classification system
of minerals during his lectures at the Jardin du Roi.
It is from these tables that one learns Daubenton
divided the mineral kingdom into four orders: (1)
stones, including precious and semiprecious, (2) fossils,
(3) combustible substances, and (4) metallic substances.
Classes of species within each order are derived from the
physical and chemical properties of the minerals. As an
appendix to this system, he included a list of volcanic
products.

These tables were updated and issued through
seven editions. See their descriptions below.

DAUBRÉE, Gabriel-Auguste. (BORN: Metz, France, 25 June 1814; DIED: Paris, France, 29 April 1896) *French mineralogist & geologist.*

Daubrée studied at the École Polytechnique in Paris, becoming a qualified mining engineer in 1834. He was placed in charge of the mines at Bas-Rhin, Alsace in 1838. Later he was appointed professor of mineralogy and geology at the University of Strasbourg. In 1859, Daubrée became engineer of all mining operations in France. Named professor of geology at the Museum of Natural History in Paris in 1861, he also became a professor of mineralogy at the École des Mines in Paris. Daubrée was appointed the director of this institution in 1872. Recipient of many honors including the Wollaston Medal from the Geological Society of London, 1880. F.R.S., 1881. Member of the French Academy of Science to which he was elected a vice president and then president in 1878 and 1879, respectively.

SUBSTANCES MINÉRALES, 1868

1309. — French, 1868.

Substances Minérales | Par | A. Daubrée | [...5 lines of titles and memberships...] | [rule] | Extrait des Rapports du Jury international de l'Exposition universelle de 1867. | [ornate rule] | Paris | Dunod, Éditeur, | Successeur De V^{or} Dalmont, | Précédemment Carilian-Gœury et Victor-Dalmont, | Libraire Des Corps Impériaux Des Ponts Et Chaussées Et Des Mines, | Quai des Augustins, 49. | [rule] | 1868.

8^o: [1]-218 222; 170ℓ.; [1]-340 p. PAGE SIZE: 208 x 118 mm.

CONTENTS: [1-2], Half title page, "Substances Minérales | [rule] | Extrait des Rapports du Jury international de l'Exposition universelle de 1867," verso "Paris-Imprimé par E. Thunot et C^e Racine, 26."; [3-4], Title page, verso blank.; [5]-331, Text.; [332], Blank.; [333]-340, "Table Des Matières."

VERY SCARCE. The first pages of the text (pp. 5-24) act as an introduction, which includes some historical review and general observations. The second section (pp. 25-80) describes combustibles as they are found in the various countries of the world. The third chapter (pp. 81-114) covers the bitumens. The fourth

(pp. 115-148) describes the mineralogy of iron, while the fifth section (pp. 149-228) concerns the mineralogy of other metals besides iron. The sixth part (pp. 229-292) is on the minerals that serve in the chemical industry. Part seven (pp. 295-505) concerns minerals used as ornaments, including gemstones. Section eight (pp. 506-524) describes various industrial minerals, including quartz, kaolin, feldspar, mica, graphite, etc. Finally, chapter ten (pp. 525-331) provides an overview of rocks and petrology. Through out the mineralogical sections, localities of specific minerals around the world are indicated.

Original issue, 1867: Daubrée's work originally appeared in the *Reports of the International Jury of the 1867 Paris Universal Exposition* under the title:

Exposition Universelle De 1867 | A Paris | [ornate rule] | Rapports Du Jury International | Publiés Sous La Direction | De M. Michel Chevalier | [ornate rule] | Substances Minérales | Par | A. Daubrée | [...2 lines of titles and memberships...] | [ornament] | Paris | Imprimerie Et Librairie Administratives De Paul Dupont | 45, Rue De Grenelle-Saint-Honoré, 45. | [rule] | 1867.

Its importance was recognized, and subsequently the work was reissued as the independent book described above.

1310. — French, 1879.

Etudes Synthétiques de Géologie Expérimentale ... Paris, Dunod, 1879.

2 parts. [Part 1] 8°: 478 p. [Part 2] 8°: 350 p. There are numerous photo-lithos, chromo-lithos, plates & maps.

VERY SCARCE. This is Daubrée's most important work. It is the summary of his research into geochemical processes. The chapters deal with different topics: geochemical processes, applications of engineering principles to the understanding of geological structures and mechanical problems, e.g., the folding and torsion of land structures. This work was of lasting significance and is still referred to today. There are very interesting chapters devoted to the effects of dynamite explosions, mineralization patterns (beautifully illustrated), meteors, artificial minerals, etc.

Related work, 1867: *Rapport sur les progrès de la géologie expérimentale. Recueil de rapports sur les progrès des sciences en France.* Paris, Imprimerie Impériale, 1867. 4°: [4], 142 p. Application of the experimental method to chemical phenomena. Artificial production or synthesis of minerals. - Application of the experimental method to physical and mechanical phenomena. - Metamorphism. - Meteorites. Daubrée was a professor with the Natural history museum, member of the Academy of Science and principal of the Mines. DSB 3, 587.

VERY SCARCE. Pedro Francisco Dávila, possessor of the largest collection of natural history specimens in Paris, and wishing to establish an institution in Spain to preserve it, approached King Carlos III of Spain. But political difficulties and a approaching war with England distracted the king, who declined the purchase. Because of debts incurred building the collection, creditors forced Dávila to put the accumulation up for auction in Paris. For this purpose, a detailed collection catalog was required. Dávila had already written many descriptions, but it was his introduction through BALTHASAR SAGE to the young ROMÉ DE L’ISLE that created this remarkable record of the collection. Romé de l’Isle took the existing material, added considerably to the mineralogical descriptions, and put the catalog into publishable form. In this task he was assisted by Abbé Duguat who helped with the mineralogical descriptions and Abbé Gua de Malves [1712-1786] who described the shells. Through their efforts, two volumes describing natural history specimens were produced, one of which was entirely devoted to minerals. In addition, a third volume written by Romé de l’Isle probably with assistance from PIERRE REMY, describes the fossils, artwork and books. The Dávila catalog (as it has become known) describes 8,096 mineral specimens that encompass a large range of localities, including a suite of specimens from Potosí in Spanish America. In addition, the catalog lists 5,253 shells, 600 preserved animals, 101 plants, 3,915 fossils, 154 bezoars and calculi, and 402 books. Over 12,000 prints and engravings, 1,741 original artworks, 441 maps, as well as various scientific instruments and precious stones are also described. Thus Dávila’s collection was certainly one of the largest ever formed, and a major auction event of the 18th century.

The published catalog provides a detailed insight into his collection, his special tastes and preferences. The major value of the collection lay in its superb mineral specimens, many of which were finely crystallized examples. Romé de l’Isle fully described the many fine mineralogical specimens, which included examples of native silver from Norway, cassiterite from the Dutch East Indies, crocoite from Siberia, pyrite from Columbia, and calcite from Saxony, etc. Dávila had been a collector for over 20 years when his accumulation was auctioned. In that time, he or his agents had acquired specimens at other auctions, including those that liquidated the collections of ALBERTUS SEBA in 1752, the Abbé Joly de Fleury in 1755, CLAUDE GEOFFROY in 1753 and others. Dávila’s

catalog received wide distribution in Paris, London, Amsterdam, Rotterdam and Basle. This helped push the total realized by Dávila to over 800,000 Spanish reales, more than enough to pay of his creditors, and to finance a second collection, which he immediately began to build. Within two or three years he had again amassed a sizable collection, specializing in minerals, and selected with more knowledge and experience than his first collection had been. Once again he dreamed of establishing the cabinet in Madrid. In October 1771 this became reality when King Carlos III agreed to take over his collections, with Dávila serving as director for life. This enormous collection eventually passed into the National Museum of Natural Sciences in Madrid, where Dávila’s specimens are still preserved today.

DE WITT, Benjamin. (BORN: 1774; DIED: New York City, New York, U.S.A., 11 September 1819) *American physician, scientist & educator.*

De Witt was educated in medicine at the University of Pennsylvania, from which he received his M.D. in 1797. He was appointed professor of medicine at Columbia College in 1807 and the following year a professor of chemistry as well. While holding the position of health officer for New York City, De Witt was stricken with illness while inspecting the Yellow fever quarantine grounds of Staten Island. He published a dissertation, *A Chemico-Medical Essay to Explain the Operation of Oxygen* [sic] (Philadelphia, 1797).

CATALOGUE OF MINERALS, 1820

1312. — English, 1820 [Collection catalog].

A | Catalogue | Of | Minerals, | Contained In The Cabinet Of The Late | Benjamin DeWitt, M.D. | Professor Of Mineralogy, &c. | In The College Of Physicians And Surgeons, | New-York. | Consisting Of More Than Eleven Thousand | Specimens, Collected In Europe | And America. | [tapered rule] Albany: | Printed By G.J. Loomis, & Co. | No. 108 State Street. | [tapered rule] 1820.

8°: π^1 1-13⁴ 14¹; 54 ℓ .; [1]-108 p. Bound in printed wraps with the title repeated and contained within an

ornate border on the front cover. PAGE SIZE: 222 x 128 mm.

CONTENTS: [1-2], Title page, verso blank.; [3]-108, Text [=catalog of mineral specimens].

RARE. A collection sale catalog of De Witt's very large mineral collection (purchased from the estate of Archibald Bruce?). The text lists thousands of specimens by species with each locality represented in the collection arranged underneath. Many foreign examples are present. In 1804, he had donated a suite of New York mineral specimens to the American Academy of Arts and Sciences.

DELAFOSSÉ

DELAFOSSE

DELAFOSSE, Gabriel. (BORN: San Quentin, France, 24 February 1796; DIED: Paris, France, 13 October 1878) *French mineralogist, geologist & chemist.*

However, Gabriel Delafosse (1796-1878), not stopping with the only numerical data, considers that their chemical composition should be studied. It thus defines the difference between the "integral molecule" (molecule) and the "chemical molecule" (atom) of the crystals. By seeking the provision of the atoms inside the physical molecule, Delafosse is one of the first, in mineralogy, to apply the atomic theory. From this study on the chemical composition of minerals result from many work on the conditions of crystallization. Thus isomorphism and polymorphism with Eilhardt Mitscherlich (1794-1863) will be discovered, then will appear the concepts of dimorphism, homeomorphism, etc.

VERY SCARCE. One of Delamétherie's major
works, which enjoyed considerable popularity during
his lifetime in spite of its ultra-Neptunian theories.
Théorie de la Terre covers all aspects of the author's
cosmological theory, with respect to the earth. A
firm believer in Wernerian theory, he postulates that
all things including living organisms were originally
crystallized from a liquid medium. He also believed that
the broad features of the earth's surface like mountains
and ocean basins were caused by the action of irregular

DELAMÉTHÉRIE

crystallizations deep with in the earth, moving water and the planetary motion of the earth. Erosion, he thought, played no significant role in geological history, and no major alterations to the crust had occurred since the main valleys and mountains were created by a primordial crystallization process. Despite these theories, Delamétherie had a wide influence among his contemporaries. If the refusal of the author to accept the significant role erosion plays in shaping the earth has lessened his reputation to historians of geology, he was innovative in his idea about evolution, speculating that man was a kind of monkey improved by social state.

The text of volume one is mostly mineralogical in character with discussions about the crystallization from fire of various substances, including the earths, airs, waters, ores, salts, stones, and precious stones. The general form of the earth is speculated on, as is the nature of electricity, magnetism, and light. Volume two could be considered an early volume on petrology, and includes discussions about various rock types including porphyrite, breccia, obsidian, lava, amber, coal, fossils, gypsum deposits, granite, as well as theories about volcanoes, rivers, seas and oceans. Volume three draws conclusions from the first two volumes and presents Delamétherie's overall theory.

VERY SCARCE. Translation and enlargement into German by the chemist Christoph Gotthold Eschenbach [1753-1831] and Johann Reinhold Forster of *Théorie de la Terre* (Paris, 1795). At the end of volume 3 with separate paging is a supplemental tract by Johann Reinhold Forster providing a commentary on ideas presented in Delamétherie's work.

Johann Reinhold Forster. (BORN: Dirschau, Germany, 22 October 1729; DIED: Halle/Saale, Germany, 9 December 1798) *German naturalist of Scottish heritage.* Father of the renowned naturalist Johann Georg Adam Forster [1754-1794], Johann Reinhold was a man of great scientific attainments, but an intractable temper. Commissioned by empress Catherine to survey the Russian colonies of Saratov province, Forster quarreled with the government and left with his family for England. There he obtained a position as instructor of natural history and modern languages at the nonconformist academy at Warrington. His temper soon compelled him to resign this appointment, and was forced for several years to earn a living publishing translations. An invitation to accompany Captain Cook on his third voyage around the world was accepted on the condition that his son, Johann Georg Adam be his assistant. The account of these travels was published by the son as *A Voyage round the World* (London, 1777; German, Berlin, 1778-80), which is considered the "first example of the glowing yet faithful description of natural phenomena which has since made a knowledge of them the common property of the educated world." [Encyc. Brit.] After returning to England, Johann Reinhold landed in debtor's prison, but was released after receiving a professorship at the University of Halle, where he remained the rest of his life.

DES CLOIZEAUX

DES CLOIZEAUX, Alfred-Louis-Olivier Legrand.

(BORN: Beauvais, France, 17 October 1817; DIED: Paris, France, 6 May 1897) *French mineralogist & crystallographer*.

Des Cloizeaux was born into a family with a long tradition in the legal profession. He studied at the Lycée Charlemagne in Paris where he came under the influence of A. LÉVY. This association introduced Des Cloizeaux to the study of minerals and crystals, and influenced his attendance of courses on mineralogy taught by A. BRONGNIART at the Muséum d'Histoire Naturelle and A. DUFRÉNOY at the École des Mines. A friendship with Jean-Baptiste Biot [1774-1862], gave Des Closieux the chance to become a member of a government sponsored expedition to Iceland to visit the sources of Iceland spar. During this trip, he visited many English geologists and mineralogists. In 1876, he was made professor of mineralogy at the Muséum, replacing G. DELAFOSSE, who he had assisted since 1873. Des Cloizeaux remained at the Muséum until 1892. He made major studies in the optical properties of minerals, particularly the chondrodites, zoisite and rhombic pyroxenes and amphiboles.

[Atlas] Consists of 84 plates, numbered I-LXXXIV, printed on 42 leaves, and showing 514 figures.

PLATES: The forty plates contained in the text volumes consist of stereo net projections of various crystal forms of the mineral species. None are signed. The unsigned plates of the atlas are numbered I-LXXXIV. The first shows a polarizing microscope and crystal diagrams, while the remaining plates illustrate crystal drawings of various mineral species described within the text. The plates of the atlas are printed on both sides of the leave.

RARE. An ambitious work that attempts to give a comprehensive view of the internal structure of minerals through the use of optical properties. Des Cloizeaux was an expert practitioner in mineral optics, and his original plan had been a simple translation of HENRY JAMES BROOKE and WILLIAM HALLOWES MILLER's edition of WILLIAM PHILLIP'S *An Elementary Introduction to Mineralogy* (6th ed., London, 1852). However the project grew much more complex as Des Cloizeaux augmented the text with his own copious observations on the crystallography and optical characteristics of the species. A large portion of this augmentation involved his attempt to firmly establish the optical properties for all known crystalizing minerals. Although the task was too large for him alone to complete, he was able to assemble parameters for over 500 substances, or about half of the mineral species known at the time. In the process, he was conclusively able to show some supposed species to be mere varieties and to discredit many other minerals as identical to species previously described. This research is included in mineralogical descriptions of the *Manuel de Minéralogie*. For a period, Des Cloizeaux's adoption of the crystallographic notation invented by RENÉ JUST HAÛY and enlarged by ARMAND LÉVY was copied in other French crystallographic works; however, Miller's notation eventually prevailed. Although the

DESNOS

author worked on this book for over thirty-five years, this book was never totally completed, with only the two volumes described being published. He was among the first investigators to recognize the utility of the polarizing microscope for mineral analysis.

Fasciles: Contributing to this work's scarcity is the fact that it was issued in fascicles. The following list provides the sequence.

Vol. 1, 572 pp., 1862.

Vol. 2, Fascile 1, 208 pp., 1874.

Vol. 2, Fascile 2, pp. 209-544, 1874/93.

1329. — French, 1867.

Nouvelles Recherches sur les Propriétés Optique des Cristaux, Naturels ou Artificiels, et sur les Variations que ces Propriétés éprouvent sous, Influence de la Chaleur. Paris, 1867.

4°: [3], [1], 222 p., illus., tables.

VERY SCARCE. This is the last and most comprehensive work in a series of studies Des Cloizeaux published concerning the effect of heat on natural and artificial crystalline bodies. He discovered that sustained heating at a certain temperature would permanently alter the positions of the optic axes of certain crystals (notably the orthoclase minerals), thereby giving the geologist a method to determine if a certain rock had been subjected to high temperature deformation. It was published as, *Institute Impérial de France, Mémoires*, vol. 18.

8°: [2], v-viii, [1]-74 p., one plate, folding map.

RARE. In this *Manual of Crystallography*, the author has abridged the science as set out by Romé de l'Isle's in his *Cristallographie* (2nd ed., 4 vols., Paris, 1783). Des Fontaines has developed in the text an easy method to determine a mineral's system of crystallization so that collectors could organize their cabinets based upon crystallography.

ENUMERATIONIS FOSSILUM, 1751

DEZALLIER D'ARGENVILLE, Antoine Joseph. (BORN: Paris, France, 4 July 1680; DIED: Paris, France, 29 November 1765) *French naturalist.*

Dezallier was born the son of a prosperous Paris bookseller. He studied at the Collège du Plessis, and from 1713 to '16 in Italy. After his return to France, he purchased the post of secretary to the King, and became Maître des Comptes in 1733 and counselor to the King in 1748. In 1716, he settled in Paris where he acquired a reputation as an expert collector of objects of art and curiosities of nature. Further travels to Germany, Holland, and England widened his circle of acquaintance and enlarged his collection of objects. Besides his works in natural history, D'Argenville is most well-known for his work on the life of artists, *Abregé de la Vie des plus Fameux Peintres* (Paris, 1745-52; 1762). Dezallier became member of the Société Royale des Sciences de Montpellier in 1740, of the Royal Society of London in 1750, and of the Académie de La Rochelle in 1758.

No. 26 (p. 533b), "Poissons de l'Amerique," figs. A-D.

SCARCE. An impressive compilation of 18th century mineral knowledge. Dezallier's introduction provides a critical review of past authors and their books. This is followed by a précis of his mineralogical system that gives a tabular arrangement of minerals, stones and precious gems, that is immediately followed by a detailed discussion of the classification. Dezallier recognized three classes of minerals: Terres (earths), Pierres (stones), and all others. Within each, groupings are differentiated primarily by physical properties such as color, form, weight, etc. The author claims this method was new because it follows the natural and apparent qualities of the species it distributes; however, its principles were set forth by several predecessors, the earliest of whom was AGRICOLA. A final section provides an excellent and detailed account of the mineralogy of France. Accompanying and scattered throughout the text are 26 finely engraved plates. These illustrations that rank among the best natural history engravings of the 18th century show minerals, stones, fossils, coral, birds and fish.

L'Histoire Naturelle was first printed in 1742, in a single volume that dealt with both mineralogy and conchology; however, in later editions, these two subjects were split into individual books, revised and expanded, and issued as independent works. Therefore, the second, third and fourth editions of the volume concerning minerals and petrification's appeared respectively in this second edition of 1755, 1760 and 1775, and the part dealing with conchology had second and third editions in 1757 and 1780.

Another issue, 1760: *L'Histoire Naturelle éclaircie dans une de ses parties principales l'Oryctologie, ...* Paris, Chez de Bure, 1760. 4°: xvi, 560, [2] p., engraved frontispiece, 25 engraved plates. Title page in red and black.

3rd edition, 1775: *L'Histoire naturelle éclairci dans une de ses parties principales, l'Oryctologie, qui traite des terres, des pierres, des métaux, des minéraux et autres fossiles, ouvrage dans lequel on trouve une nouvelle méthode Latine une notice critique des principaux Ouvrages qui ont paru sur ces matieres.* Paris, Chez De Bure l'Aine, 1775. 4°: [10], xvi, 560, [2] p., engraved frontispiece, 25 engraved plates. [This edition apparently adds 10 pages of new preliminary material.]

DIOSCORIDES

DIOSCORIDES, Pedacius. *Greek botanist.*

According to tradition, Dioscorides from the Greek city of Anazarbus, studied botany in Tarsus in Asia Minor. He appears to have been a physician to the Roman military, and had wide practical experience in pharmacy and medicine. He traveled extensively through the regions surrounding the Mediterranean. Around the year A.D. 65 he composed in Greek a treatise on medicinal substances that was to have a profound influence in the history of medicine. The treatise became the basis of subsequent books on materia medica for centuries. The treatise consisted of five books, to which two books (on poisonous plants and animals) was later added and falsely attributed to Dioscorides.

De Materia Medica ... Colle, Johannes de Medemblick, July 1478.

2°: a¹⁰ b-c⁸ d⁴ e⁸ f-g⁶ h⁸ A-B⁶ C-F⁸ [G]²; 104l.

Two column, Gothic character, 47 lines.

EDITIO PRINCEPS. Extremely rare. This is the most important classical work on medicines derived from animal, vegetable and mineral sources. Dioscorides, a Greek, lived in the age of Claudius and Nero about the middle of the first century. A botanist, military physician and pharmacologist of wide personal experience, he wrote in Greek an encyclopedia of *Materia Medica* in five books ((\times \emptyset \times)/ \times), which embodied all his knowledge of pharmacy and applied botany in a better arrangement and more completeness than earlier compilations. Dioscorides descriptions cover more than 600 plants, 35 animals and in Book V 90 minerals, with explanations on their pharmaceutical preparation and medical properties. This work remained authoritative for over fifteen centuries through numerous manuscript copies and Middle Age translations into Latin, Armenian and Arabic. Many of the preserved manuscript copies are

DIOSCORIDES

DE MATERIA MEDICA, 1478

richly illustrated with fine paintings of plants and other medical substances. Occasionally, especially in 13th-century Baghdad, manuscripts also included paintings of physicians preparing the medicinals. With the advent of printing it became a popular and standard desk reference for the physician and the laymen alike, with many different editions appearing to modern times. So many editions and issues in fact appeared that Dioscorides single work could be the subject of a substantial bibliography by itself.

Other editions & translations: Dioscorides who had always been a popular authority, was printed twice in the fifteenth century. The first of these appearances was the Latin editio princeps printed from the translation with commentary prepared by Peter of Abano [c1250-1316]. It was printed in 1478 by John of Medemblick at Colle di Val d'Elsa, located in the province of Siena about thirty miles south of Florence. This translation and commentary appeared again at Lyons in 1512, but subsequently were succeeded by two new Latin translations made directly from the Greek. These were published in 1516 in Venice and Paris, the first prepared by Ermolao Barbaro [1454-1495], who added a commentary entitled *Corollarium* and the second done by Jean Ruel [c1447-1537]. Between 1478 and 1600 there were thirty-six Latin commentaries involving ninety-six separate printings. During this same time, forty-three separate books were rendered in translation to the modern languages of Italian, French, German, Czech, Spanish, Dutch, English, and Arabic. The second appearance of Dioscorides during the incunabula period was a Greek edition published at Aldus press in July 1499. During the next century five more editions of the Greek text appeared. These statistics reflect only the direct impact. If the imitators of Dioscorides or those who based part of their work on his work are included,

hundreds of additional titles could be included.

VERY RARE. Preface by Antoine de Toledo. Second edition of the translation in alphabetical order attributed to Constantinus Africanus, with the commentary of Petrus de Abano, used for the first printed edition of Dioscorides printed by Johannes de Medemblick in Colle di Val d'Elsa in 1478. Considering the overwhelming dominance over pre-Renaissance herbal writings of the Dioscoridean corpus of medicinal plants and "associative" classification of plants by similarities of form or medicinal application (cf. Grolier/Norman, pp. 18-19), it is surprising that Medemblick's edition and the Aldine edition (1499) were the only editions of the text to appear in the fifteenth century and that the first illustrated edition did not appear until 1543. The first Latin translation of Dioscorides, which followed his original non-alphabetic arrangement, is thought to date back to the sixth century or earlier. The present translation, ascribed in a 13th century Bamberg manuscript to Constantine the African (d. 1087) is a reworking of this early Latin version, with the entries rearranged in semi alphabetical order (by first letter only) and some material discarded, and with approximately a third of the text taken from other Latin, Greek and Arabic sources. Peter of Abano's glosses were added in the fourteenth century. This medieval translation was soon to be superseded by the Latin translations of Ermolao Barbaro and Jean Ruel, both first published in 1516, and both of which returned to the original Dioscoridean text, with its explicit rejection of alphabetical order as antithetical to the proper understanding of the particular qualities and applications of plants.

Vergilius, Marcellus, 1464-1521, ed. & tr.

Greek text with Latin translation and commentary by Marcellus Vergilius.

Cologne: Johannes Soter, August 1529

Marcello Vergilio, Latin trans. & comm. Dedicatory epistle by Johannes Soter.

First Edition of Barbaro's commentary. Dioscorides was a Greek physician who lived in the first century of the Christian era. He became a military surgeon under the Roman Emperor Nero and was a contemporary of Pliny. He wrote *De Materia Medica* (about 77 A.D.) which gave medicinal properties and some botanical information for about 600 plants. For about 1500 years, it was the supreme authority due to the practical nature of its contents, and it has been called the "most successful botanical textbook ever written." Dioscorides was believed to have had his medical training in Alexandria. He traveled widely and made observations on plants from the standpoint of their medical uses. He described roots, stems, leaves and sometimes flowers.. For centuries no drug plant was considered genuine unless it could be identified by the descriptions given by Dioscorides. "Ermolao Barbaro (1454N1493), Italian humanist scholar, was born at Venice on the 21st of May 1454. At an early age he was sent to Rome, where he studied under Pomponius Laetus. He completed his education at the university of Padua, where he was appointed professor of philosophy in 1477. "Ermolao Barbaro was a humanist of the first generation: not only did he translate several Greek texts into Latin imitating Cicero's prose, but also, before translating a text, he gathered as many manuscripts as possible to

check the text, avoiding the mistakes provoked by manual copying. At the same time, Barbaro commented on the classical texts of the *Naturalis Historia* by Pliny and the *De Materia Medica* by Dioscorides. Like his contemporaries, he compared the two works and noticed that they present similar data." Marcello Vergilio "There was extraordinary charm in this man's winning expression and cultivated speech and, when he was lecturing to his young pupils from the platform or speaking to a group of listeners, he displayed a wide learning remarkable from its very variety. Moreover, he served the state as Chancellor, an office which Aretino and Poggio had held before him, and, when he had the leisure, he was accustomed to devote it to a third occupation. For at the urgent request of the Medici he had undertaken to translate all Dioscorides and he hoped to win from this task no mean glory, since from early youth he had toiled with most painstaking industry at the very difficult subject of botany. "Ruelle was one of the earliest French botanists...He was of importance especially for this translation of Dioscorides." [Hunt] "If to have written the most serviceable book of botany that the world of learning knew of during sixteen centuries were the best title to botanical greatness, to Dioscorides would readily be concurred the absolute supremacy over all other botanists, not only of antiquity but for all time...One may fairly say that the greater part of all the new botanical matter published during the whole of the 16th century, and a part of the 17th, came out in the form of annotations upon the text of Dioscorides." Cordus, Euricius, 1484-1535. / Cordus, Valerius, 1515-1544. / Ruel, Jean, 1474-1537.

Second Ryff edition of the greatest botanico-pharmacological work of antiquity, containing the first printing of Valerius Cordus' important commentary, his father's, Euricius Cordus's, Iudicium de herbis et simplicibus, and Gessner's Herbarum nomenclaturae. Dioscorides' book served as a basis and inspiration for Western botanists, whose commentaries and observations often amplified,

DIOSCORIDES

qualified, or sometimes opposed Dioscorides' teachings. 'Until well into the seventeenth century ... all botanical studies were based on this book, and the greater part of any new botanical matter published in the sixteenth and seventeenth centuries was in the form of a commentary on Dioscorides' (Printing and the mind of man). Already in 1543 (the same printer; 595 woodcuts) Ryff had edited Jean Ruel's standard translation (first, 1516), which was considered the most reliable over the following four centuries, together with commentaries by Lonicer, and Ryff himself. Valerius Cordus 'had wrought out more results than had his older contemporaries Brunfels, Tragus, and Fuchs combined. In his repeated journeyings to the great forests and wildest mountain districts, it is estimated that he discovered several hundred new plants ... Cordus took his degree in medicine at the University of Wittenberg [1531], and there shortly after gave regular lectures on Dioscorides, and with such marked acceptance that to the audience of medical students certain professors joined themselves ... The Annotations on Dioscorides [pp 449-533], being a kind of abstract of his Wittenberg lectures, were not published until five years after his death [in 1544], and were never prepared for the press by Cordus himself; perhaps not even so much as once written down by him at any time, for the printer's copy, when it came to the printing, consisted of the notes of a student who had been his auditor, whose notebook was found available' (Greene, Landmarks of Botanical Science p 370). In these Wittenberg lecture notes Cordus adds many details to Dioscorides' descriptions, distinguishes between variants and their different habitats, and points out errors in the ancient botanical and pharmacological literature, frequently referring to his own, and sometimes to his father's observations. Having discovered and described many species for the first time in the *Historia plantarum*, of which the first four books seem to have been completed by 1540 (printed first in 1561), Greene calls Cordus 'the first in all history to have formulated for himself a definitive plan or model of botanical description ... The boldest innovation that was made by any botanist of the whole sixteenth century, in whatever part of Europe, was that of Valerius Cordus when he proceeded to describe anew, and according to his own phyto-graphic scheme, some of the best-known and even best-described plants of Dioscorides' (pp. 375-6). In 1534 Valerius' father, Euricius, had published the 'Botanologicon, [which] is generally considered to be the first attempt at a scientific systematization of plants' (DSB). The index of this groundbreaking work is printed here, on pages 534 to 541, for the first time. Gessner's *Nomenclature* (starting on p 541) clarifies obscure plant names used by Dioscorides by giving their synonyms used in other texts. 'Gessner's appendix *Herbarum nomenclaturae* which contained names of plants according to Dioscorides was added because ... [Dioscorides' work] had by then become known as a botanical reference work' (Wellisch). The majority of illustrations in this edition are taken from Rösslin's herbal; about 200 are from Fuchs. The depictions of kitchen and pharmaceutical utensils, foodstuffs and processed materia medica are modelled on those of sixteenth-century Regimens.

2°: [173]ℓ.
VERY SCARCE. De materia medica libri sex. Title and text in Greek; preface and colophon in Latin. Editio princeps. Included are the Theriaca and Alexipharmaca of Nicander but issued without the Scholia, which are included in copies held by the British Museum. Without catchwords; initial capitals have not been filled in.
- 1393. 1549:** Libri Octo Græce Et Latine. Paris, B. Prévoist for P. Haultin 1549.
8°: Roman & Greek type, double column, parallel text & translation, woodcut printer's device on title (Renouard 446).
VERY SCARCE. First Edition prepared by Jacques Goupyl. It is based on Paris manuscripts with scholia. "Diese Ausgabe wird wegen guten Textes, Correctheit, netter und bequemer Ausstattung sehr geschätzt" (Choulant). "For fifteen hundred years, the writings of Dioscorides - were regarded as the ultimate authority on materia medica. Dioscorides described more than six hundred plants - was the first to write about its [opium's] virtues, to point out its great benefits in the relief of pain, insomnia, and chronic cough - the first to describe the medicinal usefulness of aloes, ammoniac, aconite, and ginger - HE WAS THE FIRST TO STATE THE NEED FOR TESTING THE PURITY OF DRUGS - DIOSCORIDES RECOGNIZED FAMILY RELATIONSHIPS BETWEEN PLANTS SEVENTEEN CENTURIES BEFORE LINNÆUS - The revival of the teachings of Dioscorides during the Renaissance laid the foundations for scientific botany and pharmacy" (Notable Medical Books p. 21). Physician Jean Ruel's Latin translation parallels the complete Greek text, which was printed once more in the 16th century and not again until 1829. Undoubtedly of interest to courtiers, BOOK VI TREATS POISONS and Books VII and VIII poisonous animals.

Ideen | zur Naturerklärung | der | Metror- oder Luftsteine | [tapered rule] | von | C.I. Diruf | [...4 lines of titles and memberships...] | [tapered rule] | [...2 lines of quotation, signed Cicero...] | [ornate rule] | Göttingen, 1805. | Bei Heinrich Dieterich.

8°: π² A-I⁸ K⁵; 79ℓ.; [4], [1]-153, [1] p. PAGE SIZE: 174 x 100 mm.

CONTENTS: [2 pgs], Title page, verso blank.; [2 pgs], "Inhaltsanzeige."; [1]-6, "Vorrede."; [7], Sectional title page, "Ideen | zur Naturerklärung | der | Meteor- oder Luftsteine."; [8], Blank.; [9]-153, Text.; [1 pg], Blank.

RARE. At the beginning of the nineteenth century, there was a debate concerning the origins of meteorites. Many believed they were developed in the earth's upper atmosphere through some unknown process, while a minority supposed they originated outside the earth's atmosphere. In this monograph, Diruf supports the theory of formation in the earth's atmosphere, referring to meteorites as "Luftsteine" (=air-stones).

Dittler | Mit Einem Beitrag: | "Optische Untersuchungsmethoden" | Von | Dr. H. Michel | Mit 56 Textfiguren | [ornament] | Dresden und Leipzig | Verlag von Theodor Steinkopff | 1915.

8°: [i]-v, [1], [1]-150, [2] p., 56 illus. (diagrams, instruments). PAGE SIZE: 222 x 158 mm.

CONTENTS: [i-ii], Title page, verso "Alle Rechte..."; [iii]-v, "Vorwort."; [vi], Blank; [vii], "Inhalts-Übersicht."; [viii], "Literatur."; [1]-146, Text.; [147]-150, "Sach=Register."; [2 pgs], Advertisements.

VERY SCARCE. A short textbook outlining the procedures for manufacturing synthetic minerals. Written for the beginner, the text includes much practical advice on the laboratory procedures, materials, and techniques, as well as diagrams of the equipment required. Oddly, the literature Dittler cites ignores all similar works of the French chemists and mineralogists, instead referencing only German books on chemistry and chemical manufacture.

DOBSON, Thomas. (BORN: probably near Edinburgh, Scotland, 1751; DIED: Philadelphia, Pennsylvania, U.S.A., 9 March 1823) *American publisher, printer & bookseller*.

Dobson married in Scotland but emigrated to the United States in the spring of 1784. He opened a bookshop in Philadelphia in 1785 and was soon established as one of the leading dealers of medical, professional and scientific books in the United States. In the post Revolutionary period he was noted for printing America editions of recent British publications. To sell his merchandise, he cultivated close relationships with the local scientific societies and the faculty of the University of Pennsylvania, where Dobson met many potential customers. Several set backs through the years caused his business to fail and for Dobson to die in obscurity.

DOELTER

DOELTER (CISTERICH Y DE LA TORRE), Cornelio August Severius. (BORN: Arroyo, Guayama, Puerto Rico, 16 September 1850; DIED: Kolbnitz, Carinthia, Austria, 8 August 1930) *Austrian mineralogist & geochemist*.

Doelter's father emigrated to Puerto Rico where he married his mother, a wealthy plantation owner. With his mother he moved to Karlsruhe, Baden in 1855, entering the lyceum in 1860. He studied chemistry, physics, mineralogy and geology at the University of Freiburg in Breisgau and at Heidelberg. In 1876, Doelter was appointed assistant professor of mineralogy and petrology at the University of Graz. He was named full professor in 1883. He succeeded G. TSCHERMAK at the University of Vienna in 1911. Through his work in physical-chemical mineralogy, he is considered one of the founders of modern petrology.

1412. — German, 1890.

Allgemeine chemische Mineralogie, von C. Doelter. Leipzig, W. Engelmann, 1890.

8°: iv, 277, [1] p., illus., diagrams. "Literatur" at head of chapters.

VERY SCARCE. A general discussion of chemical mineralogy, a principal study of the author. Here

he presents basic ideas and gives numerous examples that illustrate the application of chemistry to mineral science. *Allgemeine chemische Mineralogie* collects together all facts pertaining to chemical mineralogy and presents the information in a logical order. After a discussion of crystal structure and its relation to chemistry and isomorphism, simple methods of chemical analysis are described. Then the author presents the subject of mineral synthesis in a lengthy section. He defines his terminology carefully and carries it forward in his text. He divides the synthesis into two parts: recrystallization of mineral substances already prepared, and production of minerals and their crystallization. Under each are given practical methods, followed by brief comments on the results of experimentation. Nearly every synthesis that had been published up to the time may be traced with the aid of this book. The last sections of the volume deal with chemical changes affected by temperature, the action of solvents, the forms of minerals in nature, and the chemical constitution of minerals.

Feuss advertisement.; [1 pg], Leitz advertisement.

SCARCE. A pioneering textbook covering physical and chemical mineralogy. Along with J.H.L. Vogt, Doelter is credited with cofounding a new discipline which can be directly traced to the modern day studies of geochemistry and to a lesser extent petrology. Topics of the volume include crystal structure, size of crystal molecules, polymorphism, isomorphism, relationship between chemistry and crystallography, and the relationship between a mineral's hardness and its chemistry.

RARE, especially in complete sets. One of the great compilations in mineralogy, this work published over the course of twenty years included chemical-mineralogical descriptions from many collaborators, but Doelter authored about half of the material. Originally the work was intended to be completed by 1914 in two or three volumes, but the good reception of the first sections and the large number of new mineral species discovered during its publication, caused the *Handbuch der Mineralchemie* to balloon. The series' focus was on the chemistry of the minerals with little attention paid to the natural occurrences of the species, and although of interest to mineralogists it is actually more important as a compilation in the early history of geochemistry studies. Each volume has its own author and subject index, while the final volume contains a general index to the complete work. H. Leitmeier became a coeditor in 1925 and after Doelter's death full editor on the last volume.

8°: [i]-viii, [1]-150, [2] p.

RARE. Compiled by Dionysius van de Wijnpersse and SEBALD J. BRUGMANS. This is a sales catalog of the large collection of natural history specimens and minerals formed by the Dutch gynecologist Wouter van Doeveren, together with smaller collections of surgical and scientific instruments. It lists items sold at public auction on April 18, 1785 and subsequent days, and includes upwards of 500 specimens of mammals, amphibia, insects, etc., 2,660 specimens of minerals, 58 lots of obstetric, ophthalmological and other surgical instruments, and 114 lots of various objects including scientific apparatus. The 4-page introduction by Dionysius van de Wijnpersse deals with the collection of minerals, by far the richest of the selections. Engel records that some of these minerals went to the University of Leiden.

DOHRMANN AUCTION CATALOG, 1886

RARE. Auction catalog of Dohrmann's large collection of minerals including many fine examples from the gold fields of California. The lots are divided by species, i.e. native gold & silver, platinum, iridium, mercury, copper, iron, antimony, tellurium, sulfur, diamond, graphite, stibnite, argentite, galena, hessite, cinnabar, fluorite, cuprite, etc. Under each of the sections is the Dana number. Harvard University was a major buyer at this auction, and many of the gold specimens are still held within their collection.

Rhenanus."; 1-116, Text.

RARE. Discussion of the stones, minerals and
metals used principally in medical practice. It is
compiled from numerous previous writers on those
subjects. The work was also published by the author,
whose name appears on the imprint and at the end of
the foreword. It was one of several small works that
the author prepared giving observations on animals and
plants as well as minerals.

DÖLLINGER, Ignaz. (BORN: Bamberg, Germany,
24 May 1770; DIED: Munich, Bavaria, Germany, 14
January 1841) *German physician & mineralogist.*

In 1794, Döllinger was appointed professor of
physiology at the University of Bamberg. In 1803, he took
a similar position at the University of Würzburg, then he
became a professor at the medical school in 1823. In 1826,
he became professor of anatomy at the University of
Munich. He authored many works on religion and church
history.

DOLOMIEU, Dieudonné Sylvain Guy Tancrède.
(BORN: La Tour-Du-Pin, France, 23 June 1750; DIED:
16 November 1801) *French mineralogist.*

DOLOMIEU

Dolomieu was born to aristocratic French parents on
June 24, 1750. His father got him inducted into the Order
of Malta at age 2 and enlisted in the army at the age of
4. By 16, he was a second lieutenant and shipping out
with the Order of Malta. In 1768 he killed a man in
a duel and was sentenced to life in prison. Intercession
on the part of government officials and the Pope gained
his release to a regiment at Metz. Dolomieu learned the
natural sciences from a pharmacist there and fell in love
with his daughter, Mademoiselle Thyron. By the late
1770s, Dolomieu had published some essays and established
himself as a mineralogist and geologist. He resigned from
the military in 1779, aged 29.

In the 1780s, Dolomieu traveled extensively in Spain,
Sicily, Italy, and France. He became an authority on
volcanism and his 1788-1789 expedition in the Trentino
and Tyrol districts resulted in naming of the particular
type of rock found in this region dolomite. Dolomieu's
life was a little different from the average MIT geologist's,
though. In 1786 he wrote "Every moment that is not spent
in the company of the most loving of women is spent at the
Laboratory of Natural Science."

In 1797, Dolomieu sailed for Egypt with Bonaparte.
In failing health, he left Alexandria in 1799 to return to
France. A storm forced the boat into port at Taranto
(in the south of Italy) which happened to be part of the
Kingdom of Two Sicilies, with which France was at war.
The prevailing state of hostilities landed Dolomieu in prison
for 21 months, during which he was mistreated due to a
denunciation by angry rivals in the Order of Malta.
Bonaparte's victory over the Court of Naples in February
1801 finally resulted in Dolomieu's freedom and return to
Paris. He died on November 28, 1801 of a "putrid fever."

Voyage aux îles de Lipari, fait en 1781 ou, Notices sur les Îles Æoliennes, pour servir à l'histoire des volcans; suivi d'un mémoire sur une espèce de volcan d'air, & d'un autre sur la température du climat de Malthe, & sur la différence de la chaleur réelle & de la chaleur sensible par M. le Commandeur Déodat de Dolomieu, correspondant de l'Académie des Sciences, &c. &c. Paris, Sous le privilège de l'Académie Royale des Sciences, 1783.

8°: π^4 A-N⁸, 108ℓ.; [i]-viii, [1]-208 p., one wood engraved textvignette. PAGE SIZE: 193 x 120 mm.

VERY SCARCE. One of the author's most important books, which is concerned with the volcanoes of the Lipari Islands in southern Italy. This account of the volcanic activity in the Lipari Islands was, with his other volcanic researches, 'a worthy continuation' of Sir William Hamilton's work. Unlike his predecessors, Dolomieu did not confine himself to describing the superficial aspects of volcanic mountains and their eruption but studied lavas, loose ejecta, sublimations, etc., and compared these volcanic products with other rocks. He showed that all transitional stages exist between the coarsely crystalline lavas and the glassy rocks and confirmed the igneous origin of basalt. The Dolomites are named after him (Zittel pp. 96-97).

SUR LA PHILOSOPHIE MINÉRALOGIQUE, 1801

1429. — French, 1801 [First edition].

Sur | La Philosophie Minéralogique, | Et Sur | L'Espèce Minéralogique, | Par le Citoyen D. Dolomieu, [...3 lines of titles and memberships...] | [tapered rule] | A Paris, | De l'Imprimerie de Bossange, Masson et Besson. | [rule] | An IX. [1801.]

8°: A-H⁸; 64ℓ.; [1]-128 p.

CONTENTS: [1]-2], Title page, verso blank.; [3]-10, "Avant-Propos."; [11]-20, "Sur La Philosophie Minéralogique."; [21]-122, "... Sur L'Espèce Minéralogique."; [123]-128, "Sommaire."

RARE. This book, Dolomieu's last, examines the defects in previously published mineral classification systems and attempts to define the direction mineralogy should take to frame a correct system. When it was written, practical mineralogy was distinguished from philosophical mineralogy. The latter term as used in the title of this work refers to the investigation of mineralogical properties such that general truths about all minerals may be deduced.

After a short introduction, in which the philosophy of mineralogy is defined, Dolomieu considers in this work the nature, concept and definition of "mineral species." In the text he reflects upon the prevailing knowledge and theories, and discusses mineralogical species in general, why do species exist, the chemical makeup of minerals, what represents a mineral species, what modifies a species, the properties of minerals, analogs to mineral species, the classification of mineral species, improper mineralogical species and Dolomieu's definition of a mineral species.

DOMEYKO

DOMEYKO, Ignacio. (BORN: Niedzwiadka, Near Nowogrodck, Poland, 31 July 1802; DIED: Santiago, Chile, 23 January 1889) *Polish mineralogist & naturalist.*

Domeyko's original Polish name was Żegota Domejko. He studied natural history at the University of Wilno from 1817 to 1822; however, after taking part in a Polish insurrection against the Russian authorities, he was obliged in 1831 to emigrate to France. There he continued his education at the Sorbonne under Jean Dumas [1800-1884] and F.S. BEUDANT and at the École des Mines under O.P.A.P. DUFRENOY and Jean Elié de Beaumont [1798-1874]. He was appointed professor of chemistry and mineralogy at the college in Coquimbo, Chile in 1838. Then in 1846 he accepted an appointment to the University of Santiago, 1846, rising to the position of University Chancellor in 1867. He made many excursions throughout South America studying natural history and mineralogy.

MINERALOJÍA, 1879

1437. 3rd edition, 1879: Mineralojia | Por | Ignacio Domeyko | Profesor de Química i Mineralojia en la Universidad | de Santiago de Chile. | [rule] | Tercera Edicion | Que Comprende Principalmente Las Especies Mineralójicas | De Chile, Bolivia, Perú I Provincias Argentinas. | [ornate rule] | Santiago: | Libreria Central De Servat I Ca. | Esquina de Huérfanos i Ahumada. | 1879.

8°: π^9 1-47⁸ 48⁵; 390 ℓ .; [I]-XVIII, [1]-762 p., 6 plates (showing crystal drawings). PAGE SIZE: 238 x 154 mm.

CONTENTS: [I-II], Half title page, "Mineralojia," verso blank.; [III-IV], Title page, verso "Es Propiedad De Los Editores | ..."; [V]-XVIII, "Introduccion."—dated 1 December 1879.; [1]-687, Text.; [688], Blank.; [689], Sectional title page, "Lista | De | Las Especies Minerales | Que Se Han | Descubierto Hasta Ahora En Chile, | Peru, Bolivia I Provincias Argentinas."; [690], Blank.; [691]-740, Text.; [741]-748, "Indice De Las Materias."; [749]-760, "Indice Alfabético."; [2 pgs], "Fé De Erratas."; [At end], 6 plates.

VERY SCARCE. Since the appearance of the second edition of Domeyko's *Mineralojia*, six appendixes and numerous articles had appeared to keep the work up to date. At the time, this was the best authority on the mineralogy of Chile, Peru, Bolivia and portions of Argentina, and when this edition became available it was immediately recognized as a major work. It is written as a textbook with the preliminaries covering the basic definitions, morphological crystallography, fracture, cleavage, texture, color, and chemical characters. The second part of the work is a standard descriptive mineralogy, arranged on the four classes of (1) metals, (2) minerals with no contained metals, (3) silicates and (4) combustibles. The text incorporates a large number of new facts, due mostly to the labors of the author himself.

The minerals of Chili and the neighboring republics are in many cases of peculiar interest, and the knowledge of their mineralogy is the result of the author's efforts in spreading the results of his investigations through his publications.

Three supplements to this work were published.

Suppl. 1, 1881: Primer Apendice: Nuevas investigaciones en el reino mineral Chile i de las Republicas vecinas, in: *An. Universid. Chile*, 1881, pp. 5-48.

Suppl. 2, 1883: Secundo Apendice ... Santiago, 1883. 55 p., 2 plates.

Suppl. 3, 1884: Tercer Apendice ... Santiago, 1884. 41 p.

[Vol 5] [1-2], Title page, verso blank.; [3]-453, Text of geology treatise.; [454], Blank.; [455]-457, "Índice."; [1 pg], Blank.; [At end], 8 folding plates showing geological maps and cross sections, numbered I-VIII.

VERY RARE. This is the official edition of Domeyko's works, for which it is not clear that the first volume was ever issued; however, see the next entry. Otherwise this monumental work is a remarkable and largely unknown book that has a comprehensive description of the principal minerals and geology of Chile, Bolivia, Peru and several provinces of Argentina. The first two volumes concern mineralogy and act as a general text book on the science, together with a long descriptive mineralogy. Here the various mineral species known to occur in these region of South America are given together with physical and chemical details and notes on their localities. Volumes four and five treat methods of assaying and the geology of the region.

Tratado de ensayes tanto por la vía seca como por la vía húmeda, de toda clase de minerales i pastas de cobre, plomo, plata, oro, mercurio, etc.; con descripcion de los caractères de los principales minerales i productos de las artes en América i en particular de Chile, por Ignacio Domeyko. Ed. oficial. Primer tomo. Santiago de Chile, Impr. Cervantes, 1898.

8°: 701 p., 8 folding plates.

VERY RARE. Edited by Daniel Palacios Olmedo, this treatise on the assaying of ores is perhaps volume one of the official edition of Domeyko's works [which see previous entry].

DONATI, Vitaliano. (BORN: Padova, Italy, 1717; DIED: Mar Arabico, near Mangalore, 1762) *Italian naturalist & traveler.*

Concluded the studies of medicine and philosophy to Padova, was dedicated to the natural history and archaeology. To Rome, to the continuation of Giovanni Poleni, it received from Benedict XIV the assignment of reperire material profits to the preparation of a museum of natural history to the Wisdom. Donati to you was addressed towards the coast Dalmatian, experience that said its greater fruits in Of the marine natural history of Adriatic (1750). University professor of botany to Turin from 1750, died during a travel in East to the exemplary search assigns you to the realization of the city museum of antiquity orients them, first nucleus of the future Turinese Egizio Museum.

SAGGIO, 1750

1441. — Italian, 1750 [First edition].

Della | Storia | Naturale Marina | Dell' Adriatico | Saggio | Del Signor Dottore | Vitaliano Donati | Giunta una Lettera | Del Signor Dottore | Lionardo Sesler | Intorno ad un nuovo Genere di Pianta Terrestre. | [ornament] | In Venezia, | Appresso Francesco Storti. | [rule] | M. DCCL. | Con Licenza De' Superiori.

4°: π^4 A-I⁴ K⁵; 45 ℓ .; [8], [I]-LXXXI, [1] p., 10 engraved plates (numbered I-X; in some states, all the plates are hand colored).

CONTENTS: [2 pgs], Title page, verso blank.; [5 pgs], Dedication to Maupertuis, dated 4 March 1750.; [1 pg], "Indice."; I-LXXXIX, Text.; LXXX-LXXXI, "Indice."; [1 pg], Blank.; [At end], 10 plates.

RARE. Edited by Count Giovanni Rinaldo Carli [??-??].

Donati began a natural history expedition to the east but died en route. The observations he made before his death are contained in this work.

Facsimile reprint, 1999: C. Gibin Il Saggio della storia marina dell'Adriatico: una ricerca pionieristica Prefazione all'opera di V. Donati "Della storia naturale marina dell'Adriatico" T & G Edizioni Padova 1999.

In order to honor the dead it printed to Lucca in 1750 the Private disavowment of a woman of true spirit, but it had to destroy the edition for the participation of a doctor, ritenutosi defamed from some appreciations expressed in the work; endured after it was found implied in the famous controversy on the magic, that it followed to the publication of Of the nocturnal conference of

the Tartarotti, in the which volume, in appendix, the Tartarotti had printed its epistle on the wizards and the witches, with a confutazione in which, between the other, it advanced the suspicion that the thesis of the Carli was from considering itself heretical. The Carli it alleged to have written to the Tartarotti not to publish the dissertation, but these it denied to never have received the letter. In the controversy, that it attests the spread caught up from the Italian rationalism, the Carli - than but it endured only some attack from Jesuits of Venice - much marginal part had, and was defended from the Maffei. The episode but admonished it to star far away from the radical positions which, of the rest, its nature did not tilt. It found comfort and svago, then, in some travels, between which one along the istriane coasts, where he studied the amphitheater Roman of Pola, having for companion the friend and Vitagliano naturalist Donato to you. These just account in the volume Of the marine natural history of the Adriatic collected the fruit of the completed searches in order, than the Carli it published to own expenses (Venice 1750).

The Carli, become rich, it was discharged, in 1750, from the chair of Padova, than it did not answer to its real interests, and from the other engagements that it had in that city and it published, the year after, its first studies on the debated monetary issue, Of the origin and the commerce of the coins and the institution of the zecche of Italy (the Haya [but Venice] 1751).

TABLEAU ANALYTIQUE DES MINÉRAUX, 1802

1445. — French, 1802.

Tableau | Analytique | Des Minéraux, | Par A. Drapiez. | [ornament] | A Lille, | Chez Marlier, Imprimeur de la Préfecture, Pont de Roubaix; | Et se trouve à Paris, | Chez Firmin Didot, Libraire, rue de Thionville.

Oblong 4°: A-D⁴; 16 ℓ .; [1]-31, [1] p., 10 double page tables (9 folding). PAGE SIZE: 255 x 330 mm.

CONTENTS: [1-2], Half title page, "Tableau | Analytique | Des Minéraux," verso blank.; [3-4], Title page, verso blank.; [5], Dedication to René Just Haüy.; [6], Blank.; [7]-12, Preface.; 13-25, "Notions Préliminaires."; 26-31, "Annotations Relatives à quelques Terms Employés dans le Tableau, ..."; [1 pg], Blank.

VERY RARE. This is Drapiez' classification scheme for ores and minerals. The preliminary text briefly describes physical and chemical properties before reviewing previous methods of mineral classification. This is followed by a discussion of the physical characteristics, such as elasticity, ductility, electrical and magnetic properties that can be used to classify minerals and ores. Drapiez then employs Lamarck's tabular method to mineralogy by segregating the mineral species into a series of ten very large (67 x 55 cm), double page tables. The tables are: (a) Distribution des Minéraux selon Haüy, (b) Tableau Analytique des Minéraux, Substances Acidifères, (c) Substances Terreuses, (d) Substances Combustibles non Métalliques, (e) Substances Métalliques, consisting of three tables, and three Appendices. Throughout Drapiez uses Haüy's classification system as a foundation.

Other issues & editions: Cole (1988) believes that the work went "through a number of editions." They are most likely reissues of the original text. They include, Paris, 1809 and Lille, n.d. [c1812].

CATALOGUE DES HUIT COLLECTIONS, 1811

1449. — French, 1811 [Collection catalog].

Catalogue | Des Huit Collections | Qui Composent | Le Musée Minéralogique | De Ét. De Drée, | Avec Des Notes Instructives Sur Les Substances

Pierreuses Qui Sont | Employées Dans Différens Arts, Et Douze Planches En Taille-Douce. | [tapered rule] | A Paris, | Chez Potey, Libraire, Rue Du Bac, N° 46. | [wavy rule] | 1811.

8°: π^2 1-384; 154 ℓ .; [4], [1]-304 p., 12 plates (numbered I-XII). PAGE SIZE: 272 x 210 mm.

CONTENTS: [2 pgs], Half title page, "Musée Minéralogique," verso "De L'Imprimerie De Crapelet."; [2 pgs], Title page, verso blank.; [1]-4, "Objet Et Plan Du Musée."; [5]-290, Text.; [291]-294, "Supplément."; [295]-301, "Table | Par Ordre De Collections Et De Matieres Des Objets | Contenus Dans Ce Volume."; [302], "Errata."; [303]-304, "Explication Des Planches."; [At end], 12 plates.

PLATES: The plates figure cut gems, intaglios, vases, engraved gems, marble ornaments and statues.

RARE. A remarkable catalog of a large and famous collection of minerals, fossils, gems, rocks and objects made from stone. Based on the text, Drée divided his museum into eight collections dealing with: I. Mineralogy. II. Rocks and Stones, including meteorites. III. Products of Volcanoes, such as lava, basalt and other ejecta. IV. Fossilized Organic Bodies. V. Rocks, Stones and ornamental plaques made of stone, including jades, marbles, alabaster, malachite and hematite. VI. Precious Gems. VII. Engraved Stones and Agates. VIII. Monuments and Statues carved in stone. Through out the text, Drée has added a good commentary that enhances the specimen descriptions. The supplemental material at the end describes the latest additions to his collection including precious stones, engraved agates and monuments. The twelve fine plates by the designer La Guiche and engraved by Lecerf illustrate some of the better specimens from the collection including faceted gems, a fine dendritic agate, engraved gems and other ornamental objects. Over the years through auctions Drée sold off various sections of his museum; however, the mineral collection consisting of about 15,000 specimens was ultimately acquired *en bloc* by the Musée de Minéralogie de l'École Nationale Supérieure des Mines in Paris in 1845.

VERY SCARCE, published in an edition of 250 examples. This is a comprehensive, classified catalog of JOSEPH BANKS' extraordinary library of natural history works. Each of the first four volumes is devoted to a specific discipline: (1) general writings, including works on museums, (2) zoology, (3) botany, and (4) mineralogy. While the last volume contains supplemental titles to the four volumes and a comprehensive author index to the set. A particularly interesting fact about this fine library is that it was acquired by the British Museum *en bloc*, and the individual titles can still be examined there.

Facsimile reprint, 1966: Catalogus | Bibliothecae | Historico-Naturalis | Josephi Banks | Regi A Consiliis Intimis, | Baroneti, Balnei Equitis, | Regiae Societatis Præsidis, Cæt. | [double rule] | Auctore | Jona Dryander, A.M. | Regiae Societatis Bibliothecario. | [double rule] | Tomus I. | Scriptores Generales. | Londini: | [double rule] | Typis Gul. Each volume is identical to the makeup of the original edition, except that a series title page, "The Sources Of Science | Number 22," two pages listing other titles in the series, and the original title page with additional text added below has been added.

Joseph Banks. (BORN: 1743; DIED: 1820) *English*

naturalist. Banks was educated at Harrow, Eaton, and Christ Church, Oxford; studied natural history, and accompanied Cook in his expedition round the world in the Endeavour, 1768–71, — upon his return, created hon. D.C.L. of Oxford; built a large collection of natural history objects including minerals, which are now preserved at the British Museum; visited Iceland, 1772; made baronet, 1781; F.R.S., 1766; president of the Royal Society, 1778–1820; first to observe that almost all Australian mammals were marsupials and more primitive than placental mammals of other continents; great patron of science, where his house in Soho Square became a frequent meeting place; plant genus “Banksia” named in his honor.

POCZĄTKI MINERALOGII, 1816

1453. — Polish, 1816.

Początki | Mineralogii | Podług Wernera, | Ułożone | Dla | Słuchaczow Akademickich | Przez | Felixa Drzewińskiego | Filozofii Doktora, Uczącego Publicznie | Mineralogii W Imperatorskim Wileńskim Uniwersytecie. | [rule] | w Wilnie | w Drukarni XX. Bazylianów. | 1816.

8°: π^4 B-Z⁴ 2A-2Z⁴ 3A-3Z⁴ 4A-4D⁴ 4E-4F²; 312 ℓ .; [2], [i]-vi, [1]-615, [1] p. PAGE SIZE: 224 x 140 mm.

CONTENTS: [2 pgs], Half title page, “Początki | Mineralogii” verso “Dozwala ...”; [i-ii], Title page, verso blank.; [viii]-iv, “Przemowa.”; v, “Lista Dziel | Z Których Materye Tego Pisma Były Czerpae.”; vi, Abbreviations.; [1]-598, Text.; 599-607, “Nazwiska Mineralów.”; 608-615, “Nazwiska Ruskie.”

Translated title: Beginning mineralogy following Werner, prepared for the academic student by F. Drzewińskiego.

RARE. *Początki Mineralogii* is probably the first textbook concerning mineralogy in the Polish language. It was written out of necessity to accompany the author’s mineralogical course at the University of Wilna, there being no other suitable text in Polish.

The volume closely follows Wernerian principles by first discussing Oryctognosy or the physical characters of minerals, followed by relatively detailed descriptions of the minerals. A section on Geognosy is appended. The work finishes with Polish and Russian indexes to the minerals mentioned.

1454. — Latin, 1660.

Ioan. Bapt. Dv Hamel | De | Meteoris | Et | Fossilibus | Libri Dvo. | In Priore libro mixta imperfecta, quæque in sublimi aëre vel gignuntur, vel apparent, fusè pertractantur. | Posterior liber mixta perfecta complectitur; | vbi salium, bituminum, lapidum, gemmarum, & metallorum naturæ, causæ, & vsus inquiruntur. | [ornament] | Parisiis, | Apud Petrvm Lamy, in magna aula Palatii, secunda | columna, sub Magno Cæsare. | [rule] | M. DC. LX. | Cvm Privilegio Regis.

4°: a⁴ e⁴ i⁴ o² A-Qq⁴ Rr²; 172 ℓ .; [28], 1-310, [6] p., diagrams in the text.

CONTENTS: [2 pgs], Title page, verso blank.; [11 pgs], Dedication to Cardinal Grimaldo.; [1 pg], Blank.; [3 pgs], “In Libros | De Meteoris Et Fossilibus.” (recommendations).; [1 pg], “In Eosdem.”; [4 pgs],

METEORIS ET FOSSILIBVS LIBRI DVO, 1660

"Præfatio.;" [5 pgs], "Svmmaria" (=table of contents).; [1 pg], Blank.; 1-310, Text.; [5 pgs], "Index | Rerum Præcipvarvm.;" [1 pg], "Privilege Dv Roy."

NOTE: Leaf i3 was missing from copy examined, and it is assumed to contain the last page of the "Præfatio" and first page of the "Svmmaria."

VERY RARE. This volume investigates meteorites and various aspects of mineralogy and palaeontology, including salt, coal, metals, and various gems. Although written for the general public, it is a valuable scientific contribution for its comparisons of mid-seventeenth century theories to the ancient explanations of minerals.

DU MOLINET, Claude. (BORN: c1620; DIED: 1687) *French librarian.*

1456. — French, 1692 [Collection catalog].

Le | Cabinet De La | Bibliothèque | De | Sainte-Geneviève. | Divisé En Deux Parties. | Contenant les Antiquitez de la Réligion des Chrétiens, des Egyptiens, & | des Romains; des Tombeaux, des Poids & des Médailles; des Monnoyes, | des Pierres antiques gravées, & des Minéraux; des Talismans, des Lampes | antiques, des Animaux les plus rares et les plus singuliers, des Coquilles | les plus considérables, des Fruits étrangers, & quelques Plantes exquises. | Par le R.P. Claude Du Molinet, | Chanoine Règulier de la Congrégation de France. | [ornament] | A Paris, | Chez Antoine Dezallier, ruë Saint Jacques | à la Gouronne d'or. | [rule] | M. DC. XCII. | Avec Privilege Dv Roy.

2 parts in one volume. [Part 1] 2^o: π^2 6² A-Mmm²; 119 ℓ .; Engraved title page, [6], [1]-224, [8] p., frontispiece (portrait of du Molinet). [Part 2] 2^o: Engraved title page, 45 engraved plates by Franz Ertinger (5 double-page).

RARE. A beautifully produced catalog of the important collection brought together by Father Claude du Molinet as an annex to the library of the abbey of Sainte-Geneviève in Paris. In his preface, Du Molinet writes that his guiding principle in building the collection of rare and curious objects was the should 'be utilized in science, mathematics, astronomy, optics, surveying, natural history.' The collection was boosted by the acquisition of the greater portion of Fabri de Peiresc's [see note below] collection which consequently propelled du Molinet's effort into the first ranks of French collections.

Du Molinet divided the collection into two main sections, Antiquities and Natural History. The first is divided into those objects relating to (a) Christian religion, (b) the religion of the Egyptians and Romans, (c) the rites of burial, (d) Roman weights and measures. Coins, medals, engraved gems, talismans, and lamps then followed. The Natural History was divided into birds, animals, fish, fruits, plants, shells, stones and minerals.

The physical arrangement of the collection is carefully recounted in this catalog. Facing the entrance was a display of clothes and weapons from Persia, India and America, above which were three tiers of urns, lamps, nautical instruments, and other antiquities. Flanking this were two cabinets with specimens of petrifications, Indian birds, animals and footwear from various locations. Above were objects from China, various corals and other marine growths. The other sides of the room contained walnut cabinets containing the medal collection, which included Greek, Roman, Hebrew silver coins, papal medals, talismans and coins from far east countries. Other cabinets housed scientific instruments, precious and semi-

precious stones, minerals, shells, stuffed animals and preserved fish. Bear spaces on the walls were hung with paintings, including a series of twenty-two pastel portraits of the Kings of France. The excellent plates of Ertinger, illustrate the room that housed the collection and also two large views of the library's interior, with a view of the Paris skyline visible through an open window.

Fabri de Peiresc. (BORN: 1580; DIED: Aix, France, 1637) *French scholar & naturalist*. Peiresc was a profound antiquarian who devoted his lifetime to scholarly pursuits, travel, and correspondence with other scholars. He accumulated a library and collection of antiquities and natural curiosities from all parts of the world. But it is recorded that as quickly as many objects came into his possession he would gift them to other deserving scholars. For example, Athanasius Kircher records that many Egyptian items came into the Museum Kircherianum through Peiresc's generosity.

DUBLIN, Ireland. Trinity College.

A Descriptive catalogue of the simple minerals in the systematic collection of Trinity College, Dublin. (Dublin, 1850).

See: Apjohn, James.

DUBUISSON, François René André. (BORN: Nantes, France, 13 August 1763; DIED: Nantes, France, 11 January 1836) *French apothecary*.

Born the son of a goldsmith, Dubuisson was apprenticed as an apothecary, eventually opening a shop on rue Quées in 1788 in his native Nantes. He had an interest in the natural sciences and collected specimens of all the minerals, plants and animals he encountered. Eventually, he gave these important collections to the city of Nantes. There they constituted a museum of natural history, which opened to the public on 15 August 1810. On the occasion, Dubuisson gave a commemorative speech. He was one of the founders of the Société Académique de Nantes (Academic Society of Nantes).

8°: π⁸ 2-208; 168ℓ.; [1]-301, [19] p. Contained within a pocket on the back cover, one folding map, "Carte | Geognostique | Du | Département | De La | Loire=Inférieure. | ... | 1832." Page 37 misnumbered 73. PAGE SIZE: 196 x 125 mm.

CONTENTS: [1-2], Half title page, "Catalogue | De La Collection | Minéralogie, Géognostique | Et Minéralurgique | Du Département De La Loire-Inférieure," verso blank.; [3-4], Title page, verso blank.; [5]-48, "Introduction."; [49]-301, "Catalogue | De La Collection | Mineralogie, Géognostique | Et Minéralurgique | ..."; [1 pg], Blank.; [8 pgs], "Table | Des | Noms Des Communes."; [8 pgs], "Table | Des | Noms Des Matières."; [1 pg], "Errata."; [1 pg], Blank.

VERY SCARCE. Describes the mineralogical, paleontological and geological samples found in the region of the Loire-Inférieure in northwest France. The specimens described were almost all collected by Dubuisson on one of his many excursions within France. In the introduction he describes the terrain encountered and the best collecting areas. This is followed by a descriptive catalog of the specimens, including quartz, calcite, silver minerals, pyromorphite, mimetite, etc. At the end is an index of the various mineral synonyms and at table of contents. A large folding map, accompanying but not bound into the text, provides an overview of the region and the various locales from which specimens originated. The specimens described subsequently became part of the collections of the Muséum de Nantes

DUFRÉNOY

(Natural History Museum of Nantes). This museum had been founded in 1799, when Dubuisson had donated his important natural history collections to the city of Nantes.

MANUEL, 1770

DUCHESNE, Henri-Gabriel.

1458. — French, 1770 [First edition].

[Contained within an ornate box:] Manuel | Du | Naturaliste. | Ouvrage | Utile aux Voyageurs, & à ceux qui | visitent les Cabinets d'Histoire | Naturelle & de Curiosités. | Dédie | A M. de Buffon, de l'Académie | Française, &c. &c. Intendant du Jardin | Royal des Plantes. | [ornament] | A Paris, | Chez G. Desprez, Imprimeur du Roi | & du Clergé de France, rue S. Jacques. | [ornate rule] | M. DCC. LXX. | Avec Approbation & Privilège du Roi.

12°: [I]-XII, [1]-598, [2] p. PAGE SIZE: 167 CE 108 mm.

SCARCE. Premier edition with the text dedicated to Buffon, the celebrated anthropologist and friend of Voltaire, whose monumental *Natural History*, published in 1746 in 36 volumes. In France, in the later eighteenth century, it was a popular pastime to collect objects of natural history. Duchesne's *Manual* helped guide the collector in his hobby. It is printed in two columns and contains the Latin and geographical names of all manner of natural history objects, including minerals.

Another edition, 1797: *Manuel du Naturaliste ouvrage utile aux Voyageurs et à ceux qui visitent les Cabinets d'Histoire Naturelle et de Curiosités*. Paris, Remont, 1797. 4 vols. 8°: 512 p., 426 p., 487 p., 368 p., 8 plates.

Scarce. Co-authored with P.-J. Macquer [see note below] this French natural history encyclopaedia was intended for voyagers and museum visitors. In the later

part of the eighteenth century the "Cabinet of Curiosity" or small privately owned museum was flourishing in England and throughout Europe. During this time an interest in natural history was fashionable and this type of reference work would have been essential for the library of the well-educated European. The text is a good indicator of the level of understanding and knowledge of natural history at that time.

Pierre Joseph Macquer. (BORN: Paris, France, 9 October 1718; DIED: Paris, France, 15 February 1784) *French physician & chemist.* Macquer was professor of chemistry at the Jardin du Roi in Paris, as well as the overseer at the royal porcelain manufacturing plants in Sèvres. Macquer wrote several highly regarded textbooks in chemistry and physics. He was elected a member of the Academie des Sciences in Paris in 1845.

DUFRÉNOY

DUFRÉNOY, Ours Pierre Armand Petit. (BORN: Sevran, France, 5 September 1742; DIED: Paris, France, 20 March 1857) *French mineralogist & geologist.*

Dufrénoy studied at the École Polytechnique and École des Mines in Paris. He was named engineer of mines in 1818, and assumed the rôle as head of the collections of the École des Mines. At that same institution, he was appointed an assistant professor of mineralogy in 1827, becoming a full professor in 1835. In 1846, he was named director of the school, and in that capacity he was responsible for modernizing the curriculum. In 1822, under the supervision of BROCHANT DE VILLIERS, DUFRÉNOY and BEAUMONT were selected by the government to carry out the necessary field work to prepare the first modern geological map of France. This research occupied Dufrénoy until 1841 when the map was published. After Brongniart's death in 1847, he was appointed professor of mineralogy at the Muséum d'Histoire Naturelle. He was made a member of the Academie des Sciences in 1840 and in 1843 the Geological Society of London presented Dufrénoy and Élie de Beaumont the Wollaston Medal for their geological map.

VERY SCARCE. Co-authored with Léonce Élie de Beaumont [1798-1874]. This is the first separate appearance of a publication that appeared as a series of articles in the *Annales des Mines* from 1824-27. "In the year 1820 a copy of Greenough's map of England and Wales having been sent to the École des Mines at Paris, the desire arose to provide France with a similar compendium of its geology. Accordingly, two engineers of the Mines Department, Beaumont and Dufrénoy, were, in 1822, sent to England where they spent six months studying the principles on which the English map had been constructed, and other subjects connected with the project." (Geikie) Its publication exerted a powerful influence on the development of geology in France.

SCARCE. This is an important mineralogical and crystallographic work in the history of those sciences. Häüy, gone for over twenty years when these volumes appeared, no longer dominated the French school. Chemistry and crystallography had made major discoveries, making it possible to advance to a more successful theoretical stage in mineral classification. New original research was being carried on, as is evident by the amount of information contained in these volumes. Here the author describes the effects of high temperature on minerals and crystals and gives theories about the structure of crystals, together with the standard information about the physical characters of minerals, chemical properties, crystal systems and systematic mineralogy, in which the author follows a natural method of classification.

Advances in the chemical composition of mineral species now allowed Dufrénoy to employ chemistry as a true means of classification. He uses this classification because he believes it brings together all observations made in the science under a single, unified explanation. However, he believed that using the bases to classify metals, gave birth to true natural groups in which there was one common element. For example, all those of lead, all those of copper, and all those of iron. On the other hand, silicates were their own distinct group because hardness, luster and other properties were similar. Dufrénoy believed then, that classification by acids should be confined to the silicates.

In the first volume of the text are seven folding engraved plates, four of which are detailed renderings of mineralogical instruments: goniometers (Häüy, Wollaston, Mitscherlich, Adelman and Babinet), Soleil refractometer and a Soleil polariscope. The atlas volume contains over 200 engraved plates showing

more than 1,200 crystal diagrams with references to Naumann's crystal notation.

VERY SCARCE. Francis Pearce, joint author (Part I) and Alfred Monnier, joint author (Part II). An authoritative textbook describing the techniques used in mineralogy and petrology, including especially optics and qualitative chemistry. Volume two of the second part was never published owing to WWI.

Contents : 1. ptie. Les méthodes optiques.—2. ptie. t. 1. Les méthodes chimiques qualitatives. Notes : 2. ptie.: par Louis Duparc et Alfred Monnier.

Mineralogy, Determinative. Petrology. Physical optics. Chemistry, Analytic.

1465. 3rd edition, 1914: Traité de chimie analytique qualitative suivi de tables systématiques pour l'analyse minérale, par L'Duparc et A. Monnier. 3e édition. Genève, Librairie scientifique Kündig, 1914.

8°: xii, 466 p.

VERY SCARCE. Co-authored with Alfred Monnier, professor extraordinary at the University of Genève. This treatise on qualitative analytical chemistry contains systematic tables showing the analysis of minerals.

EAKLE, Arthur Starr. (BORN: Washington, D.C., U.S.A., 27 July 1862; DIED: Honolulu, Hawaii, U.S.A., 5 July 1931) *American mineralogist*.

Eakle received his doctorate, magna cum laude, from the University of Munich in 1896. He came to Berkeley in 1900, becoming assistant professor in 1903, associate professor in 1913, full professor in 1919 and professor emeritus in 1929. Eakle contributed to mineralogical science by the discovery of new minerals. He was highly esteemed by the mineralogists of the world, and was a member of the Mineralogical Society of America and its president in 1925. He died while studying the minerals of Hawaii.

of Mineralogy, University of California. | First
Edition. | First Thousand. | New York: |
John Wiley & Sons. | London: Chapman & Hall,
Limited. | 1904.

8°: [i]-iii, [1], [1]-73, [1] p., index, tables
throughout. PAGE SIZE: 228 x 148 mm.

CONTENTS: [i-ii], Title page, verso copyright notice.; [iii], "Introduction."; [1 pg], Blank; [1]-7. "Mineral Tables."—description of physical properties.; [8], Blank; 9, "Analytical Key."; 10-69, Tables of the physical properties of minerals, first ordered by streak then the color of the mineral.; [70], Blank; 71-73, "Index."; [1 pg], Blank.

SCARCE. These *Tables* provide information on the prominent physical characters so that an unknown sample could be identified. They were made for practical determination, so for the most part, only the most common species are listed. To perfect the text, CHARLES PALACHE used the manuscript during his summer course of mineralogy, taught at the University of California in 1903. The book was popular and widely used in colleges and universities of The United States, being reissued many times to at least 1918 with no changes to the text.

EDWARDS

EDWARDS, George. (BORN: Stratford, near Westham, Essex, England, 3 April 1694; DIED: Westham, Essex, England, 23 April 1773) *English naturalist.*

As a youth, Edwards had access to a large library, which developed his habit of incessant reading. He traveled throughout northern Europe, and in 1718 while going through Norway he was imprisoned by Danish soldiers who suspected him of spying. After his release, the travels were continued through France. He returned to England in 1720, where he began producing colored drawings of animals that fetched good prices and brought him contact with influential men of the period. One of them, Sir Hans Sloane, recommended Edwards as librarian of the Royal College of Physicians in 1733. His great work was an illustrated *History of Birds* (4 vols., London, 1743-51), for which the Royal Society awarded him a gold medal and elected him a fellow.

ELEMENTS OF FOSSIOLOGY, 1776

1480. — English, 1776.

Elements | Of | Fossiology*: | or, an | Arrangement
 | of | Fossils, | into | Classes, Order, Genera,
 | and Species; | with | Their Characters. |
 [rule] | By George Edwards, Esq; | [rule] | Fidem
 non derogat error. | [double rule] | London: |
 Printed by B. White, No. 63, Fleet Street. | [rule] |
 MDCCLXXVI.

8°: π^4 B-Q⁴; 64 ℓ .; [8], [1]-120 p. PAGE SIZE: 220 x 130 mm.

CONTENTS: [2 pgs], Title page, verso blank.; [1 pg], "Advertisement."; [1 pg], "Errata."; [1 pg], "To the Reader."; [1 pg], Blank.; [2 pgs], "Index."; [1]-120, Text.

VERY SCARCE. This monograph was published from notes found in the author's effects after his death. It describes slightly over one hundred minerals in a system claimed to be new, but which is only a modification of LINNEAUS' classification plan. In "To the Reader," Edwards recognizes this treatise to be imperfect, however he wrote it with the intention of publishing another edition, "enriched with a great number, and a more minute account of individual fossils ..." The term *fossiology* used in the title of this work is defined by Edwards as "the knowledge of the different bodies, which are found in the earth, and which have neither animal or vegetable origin."

The text begins with a short introduction. This is followed by the descriptive mineralogy, which is divided into the six classes: (1) earths, (2) stones,

(3) inflammables, (4) metals, (5) cryptometalline fossils (=nonmetallic looking minerals that contain metals) and (6) salts.

EGEDE

EGEDE, Hans Poulsen. (BORN: 31 January 1686; DIED: 5 November 1758) *Norwegian theologian.*

Egede, a Lutheran missionary, went to Greenland in 1721 and, with the support of the Danish government, founded a mission for the Eskimo. He also helped to initiate trade between Denmark and Greenland. He returned to Copenhagen in 1736 to become principal of a seminary that trained missionaries for Greenland. His son, Povel Hansen also a missionary to Greenland, completed a translation of the New Testament for use by the Eskimo.

EGLESTON

RARE. No more published. This was to be an ambitious description of the physical and political character of Iceland; however, only this first part was published. The introduction contains a bibliography of Iceland, while the remainder of the volume treats the physical geography of the island, including geological phenomena such as geysers, mineral springs, volcanoes, mineral deposits, etc.

EGLESTON (c1914)

EGLESTON, Thomas. (BORN: New York City, New York, U.S.A., 9 December 1832; DIED: New York City, New York, U.S.A., 15 January 1900) *American mining expert & metallurgist.*

Egleston received his bachelareate and master degrees from Yale in 1854 and 1857, respectively. For post graduate work, he traveled to Paris and the École des Mines graduating in 1860. Upon returning to America in 1861, he was appointed superintendent of mineral and metallurgical products at the Smithsonian Institution. In 1864, Egleston left the Smithsonian to found the School of Mines at Columbia college where he remained a professor until 1897. In his honor the Egleston medal of the Columbia University School of Engineering was created.

1494. 2nd edition, 1887: Catalogue | of | Minerals And Synonyms. | By | T. Egleston, Ph.D. | [ornate rule] | Washington: | Government Printing Office. | 1887.

[SERIES TITLE PAGE READS:]

Department of the Interiors | U.S. National Museum. | — Serial Number 44 — | Bulletin | Of The | United States National Museum | No. 33. | [rule] | Published Under The Direction Of The Smithsonian Institution. | [ornate rule] | Washington: | Government Printing Office. | 1889.

8°: [1]-6, 6a-6d, 7-198 p. PAGE SIZE: 230 x 134 mm.

CONTENTS: [1]-2, Series title page, verso "Advertisement."—signed Spencer F. Baird, 7 January 1887.; [3-4], Title page, verso blank.; 5-6, "Preface."—signed Thos. Egleston, 1 December 1806.; 6a-6b, "List Of Abbreviations."; 6c-6d, "List Of Errata."; 7-190, "Catalogue Of Minerals."; 191-198, "Supplement."

SCARCE. This work was published as the forty-fourth in a series of papers intended to illustrate the collections of natural history and ethnology belonging to the United States, and constituting the National Museum (now the Smithsonian Institution). This catalog was begun in 1867 and used for the arrangement of the collections of the School of Mines of Columbia College; however, the work was not completed at that time. By the year 1886 and just prior to this edition, the science had added a considerable number of new species and discredited or corrected others; hence, it was a considerable undertaking to bring the text

CATALOGUE OF MINERALS, 1887

up-to-date.

REFERENCES: BL: [Ac.1875/13.]. • NUC.

1495. 3rd edition, 1892: A | Catalogue | of | Minerals and Synonyms. | By | T. Egleston, Ph.D. | Third Edition, Revised And Enlarged. | New York: | John Wiley & Sons, | 53 East Tenth Street. | 1892.

8°: [2], i-iii, [5], [1]-379, [1] p. PAGE SIZE: 246 x 150 mm.

CONTENTS: [2 pgs], Title page, verso "Copyright, 1891, | By | Thos. Egleston."; i-iii, Preface, signed Thomas Egleston, 1 April 1892.; [1 pg], Blank.; [1 pg], "Preface To The Second Edition."—signed Thomas Egleston, 1 April 1891.; [1 pg], Blank.; [2 pgs], "List Of Abbreviations."; [1]-379, "Catalogue Of Minerals."; [1 pg], Blank.

SCARCE. Egleston undertook this revision after not finding a single work that contained a list of all known mineral names and synonyms. In the preface, is a list of 19 mineralogical authorities which he consulted in the compilation of this dictionary. Names have been added and changed in the text that the progress of the science dictated. As far as possible the names of rocks have been omitted, while the names of authenticated species are printed in bold. Doubtful species have been printed in ordinary type. In many instances the first description of the species or sometimes the best authority have been listed at the end of the description.

1499. — Latin, 1724 [First edition].

Dissertatio de belemnitis Suevicis. Lugduni Bavorum, 1724.

4°: 21 p.

VERY SCARCE. In this important paper on fossils in Sweden, Ehrhart was able to show that belemnites, long thought to be inorganic fossils, had a distinctive chambered shell “analogous to that of the living cephalopod molluscs Nautilus and Spirula. Combined with his careful analysis of the mode of growth of the guard, this structural analogy made the organic origin of belemnites almost indisputable” (Rudwick). Ehrhart cites as his sources Scheuchzer, de Boodt, and Volkmann.

SCARCE. This is a French translation by de Fontallard of *Versuch einer Schmelzkunst mit Beyhülfe der Fenerluft* (Strassburg, 1786). It embodies Ehrmann’s experiments on fusion, which includes one of the earliest descriptions and illustrations of the oxygen blowpipe, which would become important in high temperature study of minerals. Ehrmann was a correspondent of Lavoisier, who conducted a series of experiments on the effects of high temperature on various substances. Lavoisier requested that his own memoirs on the subject be reprinted together with the translation of Ehrmann’s *Essai*. De Fontallard compiled and added them at the end of the book (pp. 235-349) together with a mémoire by Meusnier that describes and illustrates the apparatus used by both Lavoisier and Ehrmann in their experiments (pp. 350-366).

Jean François de Fontallard. *French translator.* Acted as translator on several works during the period 1770 to 1790.

EICHWALD, Karl Eduard Ivanovich. (BORN: Jelgava, Latvia, 4 July 1795; DIED: St. Petersburg, Russia, 16 November 1876) *Latvian geologist & naturalist*.

Eichwald (or the Russian Eikhval'd) studied medicine and natural sciences at the University of Berlin, 1814-17. Returning to Russia, he served as professor at the universities of Dorpat (present-day Tartu), 1821, Kazan, 1823, and Wilno (present-day Vilnius), 1829, and the St. Petersburg Medical-Surgical Academy, 1838-51. During this last appointment, he also lectured on paleontology at the St. Petersburg Mining Institute. He made several extended trips throughout the Urals and western Russia. Eichwald wrote on many subjects besides mineralogy. These include geology, paleontology, geography, plants and animals. In the field of zoology, he discovered many species new to Russia, and wrote *Zoologia Specialis* (3 vols., St. Petersburg, 1829-31), which outlined a classification of animals based on comparative anatomy, physiology, and paleontology. He also wrote numerous textbooks for use in Russia's universities. Eichwald was a corresponding member of the St. Petersburg Academy of Sciences from 1826.

RARE. In his textbook, *Oryctognosy mainly with Regards to Russia*, Eichwald has focused his descriptions on those mineralogical species found in the Russian empire. He was able to rely on his own extensive exploration of the country to write comprehensively on the subject. Eichwald also introduces his new mineralogical classification based on chemistry, which on sound arguments excludes liquids and gases from mineralogy.

VERY SCARCE. Describes the natural history collections of the Zwinger Museum at Dresden;

these included mineral, fossil, botanical, anatomical, zoological, and coral (shell). The author gives a history of each collection and comments on many of the highlights of this great museum. The plates show the floor plan of the museum. The first separate guide to the Royal natural history collections housed in the magnificent baroque Zwinger in Dresden, which also contained the print cabinet. This work was one of the by-products of August the Strong's reorganization of the old *Wunderkammer* into specialized collections, and contains an account of the minerals, petrifications, animal skeletons and specimens, corals and shells. The final chapter contains a description of a model of Solomon's temple, constructed over a period of twenty years from Biblical references by a Hamburg gentleman named Schott.

The work described here has both the German and French texts combined. Two other states of the catalog exist, one consisting solely of the German text, the other completely in French. Both of these were published in 1755.

EKEBERG, Anders Gustaf. (BORN: Stockholm, Sweden, 16 January 1767; DIED: Uppsala, Sweden, 11 February 1813) *Swedish chemist & mineralogist.*

Came to Upsala 1784 and studied under, among others, Thunberg and defended altogether six theses in natural history between 1787 and 1800. He was hired 1799 by the Upsala Academy as a lecturer and laborator in chemistry. His major contribution to science was the naming of yttria and the discovery of tantalum. Yttria was named in a follow up article (KVAH 1797, 156) on the black mineral gadolinite and the new "earth" described therein by Johan Gadolin (KVAH 1794). Five years later he published an article (KVAH 1802, 68) where he compared yttrium and beryllium (ytterjord vs berylljord), in it he reports on a new mineral yttrotantal (yttrotantalite) that apart from yttrium also contains a new metal tantalum. He was a member of the Royal Swedish academy of Sciences (1799) as well as the Society of Sciences in Uppsala (1810). Ekeberg suffered from weak helth and died only 46 years old. 1509. — Swedish, 1773.

Capitaine Carl Gustav Ekebergs ostindiska resa, åren 1770 och 1771. Beskrefven uti bref til Kongl. Svenska vet. academiens secreterare. Stockholm: Tryckt på eget förlag hos Fougst, 1773.

8°: [8], 170, [2] p., one folding engraved map “Charta öfver Cap Godt Hopp,” 5 folding engraved plates.

VERY SCARCE. Privately published, this work concerns various voyages and travels undertaken by the author throughout Asia, especially China and the East India's. The author, Captain Ekeberg, the most famous of all the captains in the Swedish East India Company, and a friend of Linnaeus, whom he provided with much material from his voyages, drew the views and the map in this book. He also engraved the map and one view, the other four views were engraved by Olof Jacobsson Årre.

Facsimile reprint, 1970: Ostindisk resa åren 1770 och 1771 beskrefven uti bref til Kongl. Svenska Vet. Academiens secreterare. [16], 170, [1] p., 5 plates.

ELDERHORST, William. (BORN: Hannover, Germany, 30 September 1828; DIED: Maracaibo, Venezuela, 28 July 1861) *German chemist*.

Elderhorst was the son of an army officer, and consequently began his career as a military cadet. He was released from service, however, due to weak eyesight. Thereafter, he studied chemistry at the University of Göttingen. In 1853, Elderhorst emigrated to The United States and worked in drugstores in Charleston, South Carolina and New York City. He also gave private instruction in chemistry. In 1855, he was appointed professor of theoretical and practical chemistry at the Rensselaer Polytechnic Institute. In this capacity, he was an important instrument in transferring the techniques of the German chemical school to his American students.

LEHRBUCH DER MINERALOGIE, 1799

1524. 2nd edition, 1799-1802: Lehrbuch | Der | Mineralogie | [tapered rule] | entworfen | von | Ludwig August Emmerling, | [...3 lines of titles and memberships...] | [rule] | Que praesenti opusculo desunt, supplcat aetnas. | Quintilian. | [rule] | Ersten Theils erster [-zweiter] Band. | [rule] | Zweite, ganz umgearbeitete, durchaus vermehrte | und verbesserte Auflage. | [ornate rule] | Giessen 1799. [-1802.] | bei Georg Friedrich Heyer.

2 parts in 2 vols. [VOL 1: 1799] 8°: [i]-xlvi, [2], [1]-499, [3] p. [VOL 2: 1802] 8°: [i]-xxx, [1]-928 p. PAGE SIZE: 186 x 110 mm.

CONTENTS: [Vol 1] [i-ii], Title page, verso blank.; [iii-iv], Dedication.; [v]-xlii, "Vorrede | zur Ersten Auflage."—signed Emmerling, 3 April 1793.; [xliii]-xlvi, "Vorrede | zur zweiten Auflage."—signed Emmerling, 25 July 1799.; [1 pg], Sectional title page, "Allgemeine Grundsätze | der | Oryktognostischen | Klassifikation.;" [1 pg], Blank.; [1]-499, Text.; [1 pg], Blank.; [2 pgs], "Berichtigungen."

[Vol 2] [i-ii], Title page, verso "Die Wahrheit ist

kein nahes Ziel.;" [iii], Dedication.; [iv], Blank.; [v]-xxx, "Vorrede.;" [1]-928, Text.

VERY SCARCE. Enlarged edition, correcting many mistakes published in the first edition. The author basically supports Werner's mineralogical theories, but has modified and added to the descriptions of the chemical composition of minerals. These revisions came about principally because of Klaproth's discoveries in the chemical makeup of minerals.

The Introduction covers topics on the philosophy of mineral classification, the nomenclature of mineral names, and a system of external characteristics. The classification is then presented in a tabular overview followed by the descriptive mineralogy.

EMMONS

EMMONS, Ebenezer. (BORN: Middlefield, Massachusetts, U.S.A., 16 May 1799; DIED: Brunswick County, North Carolina, U.S.A., 1 October 1863) *American physician & geologist.*

Born the son of a farmer, Emmons attended the Rensselaer Polytechnic Institute. There he became an assistant of the American geologist Amos Eaton [1776–1842]. After graduating in 1826, Emmons opened a medical practice specializing in obstetrics in Chester, Mass. From 1828 to 1834, he delivered lectures in chemistry at Williams College. This led in 1833 to an appointment as professor of natural history, a position he held until 1859, at which time Emmons was made professor of geology and mineralogy.

As an author, Emmons wrote on agriculture, geology and mineralogy. His most important book was *Geology ... of the Second Geological District*, which was issued as part of Division 4 of the *Natural History of New York* (4 vols., Albany, 1842). In this work, Emmons created the first comprehensive picture of the geology of New York by devising his own influential system of geological classification.

MANUAL, 1826

1525. — English, 1826 [First edition].

Manual | of | Mineralogy and Geology: | designed | for the use of schools; | and for | persons attending lectures on these subjects, | as also a convenient pocket companion | for travellers, | in the United States of America. | [ornate rule] | By Ebenezer Emmons, M.D. | [ornate rule] | Adopted as a Text-Book in the Rensselaer School. | [rule] | Albany: | Printed by Websters and Skinners. | [rule] | 1826.

12° (in 6s): 1-2⁶ A-B⁶ 3-18⁶ 197; 127ℓ.; [i]-xxiii, [1], [1]-229, [1] p. PAGE SIZE: 178 x 104 mm.

CONTENTS: [i-ii], Title page, verso "Northern District of New York. ..."; [iii]-v, "Preface."; [vi], Blank.; [vii]-xxiii, "Tabular View of the Arrangement Adopted in this Work."; [1 pg], Blank.; [1]-22, "Introduction to the Study of Mineralogy."; [2 pgs], Blanks.; [25]-178, Text of descriptive mineralogy.; [179]-181, "Introduction to the Study of Geology."; [182], "Arrangement of Rocks."; [183]-206, "General Description of North American Rocks."; 207-211, "Explanation of Terms, &c. Commonly used in mineralogical and geological descriptions."; [212]-222, "Table of Synonymes."; [223]-229, "Index."; [1 pg], Addenda and errata.

VERY SCARCE. After Cleaveland's encyclopedic *Treatise* appeared in 1816 and 1822, many people began

to have an interest in the minerals of the United States, and from this interest demand arose for a short, simple, descriptive mineralogy. Although Cleaveland's work was a comprehensive reference, it was too bulky and expensive to readily be used as a field guide. Under these conditions Emmons published his *Manual* to favorable response.

The book adopts the classification of MOHS but substitutes BROOKE's system of crystallography. The individual mineral descriptions are clear and concise, giving the user ample general information while stressing known localities in the United States. Unfortunately use as a textbook undoubtedly caused many copies of this book to quickly dilapidate making both this edition and the second rare collectibles.

1526. 2nd edition, 1832: Manual | of | Mineralogy and Geology. | [rule] | By | Ebenezer Emmons, M.D. | Lectuer on Chemistry and Natural History in Williams College. | [rule] | Second Edition. | [rule] | Albany: | Webster and Skinners. | [rule] | 1832.

12° (in 6s): π⁶ 1-25⁶; 156ℓ.; [2], [i]-v, [1], [ix]-xii, [1]-299, [1] p. PAGE SIZE: 184 x 110 mm.

CONTENTS: [2 pgs], Half title page, "Manual of Mineralogy and Geology," verso blank.; [i-ii], Title page verso "Entered according to Act of Congress, in the year 1832, ..."; [iii]-v, "Preface | To The Second Edition."—signed E. Emmons, August 1832.; [1], Blank.; [ix]-xii, "Table of Contents."; [1]-269, Text.; [270], Blank.; [271]-288, "Notes Referred to in the Introduction to Mineralogy."; [289]-299, "Index."; [1 pg], Blank.

SCARCE. A thoroughly revised text which is more useable than the first attempt. In preparing this edition, Emmons has remodeled its content to facilitate instruction in the science of minerals. It was his intent to supply the student with a guide so they could satisfactorily conduct through the process of examining minerals. To facilitate this, the text included sufficient information to employ the characters of minerals substances and to trace the relations existing between the various species. The classification system of F. MOHS has like the first edition again been adopted. For crystallography, the system of H.J. BROOKE is retained. Emmons has included a few woodcuts to illustrate the crystalline forms, which was lacking from the previous edition.

The short introduction provides an overview of the definition and purpose of mineralogy. A section describing the terminology used in the crystallographic description follows. The optical and physical properties of minerals are reviewed. The theory of classification, nomenclature, characteristics and a description of physiography precede the large section devoted to descriptive mineralogy. An index concludes the work.

Über Massen und Steine die aus dem Monde auf die Erde gefallen sind, von F.A. Freiherr von Ende ... Braunschweig, Friedrich Vieweg, 1804.

8°: π^3 1-11⁴ 12¹; 48^{l.}; [6], [1]-90 p.

CONTENTS: [2 pgs], Title page, verso blank.; [4 pgs], "Vorrede."; 1-90, Text.

RARE. This is a detailed account of the iron and stone masses that were reputed to fall from the sky to the earth and that had been observed since ancient times. The early 19th century witnessed a debate concerning the origins of these meteorites, and Ende provides accounts of the various theories, including those of Gassendi, Chladni, and Descartes.

ENDLICH, Frederic Miller. (BORN: Reading, Pennsylvania, U.S.A., 14 June 1851; DIED: Tucson, Arizona, U.S.A., 17 July 1899) *American mining engineer.*

Endlich was from 1872 to 1880, mineralogist and chemist at the Smithsonian Institution. During the period 1873 to 1879, he was assistant on the U.S. Geological and Geographical Surveys under F.V. Hayden [1829-1887]. From 1880, to the time of his suicide, Endlich was engaged as a mining engineer consultant in various parts of the American west.

VERY RARE. Edited by Engelbronner, who added his own commentaries, this is a catalog of

the minerals and fossils contained in Anthony Grill's Wunderkammer. There are two title pages, one in Latin, the other in Dutch. The text is also in Latin and Dutch. The collection was apparently sold after Grill's death in 1783.

Anthony Grill. (BORN: Stockholm, Sweden, c1704; DIED: Amsterdam, The Netherlands, 22 March 1783) *Dutch merchant & banker*. From 1722 onwards, Grill lived and worked in Amsterdam in the "Huys met de Hoofden." He possessed a natural history cabinet especially rich in minerals, which was sold after his death.

SCARCE. Translation by CHRISTIAN EHRENFRIED WEIGEL. The basis of this work were lectures Engström delivered in London in 1765. It first appeared in print as an appendix to *An Essay Towards a System of Mineralogy* (1st ed., London, 1770), for which Engström had acted as the English translator. It describes Engström's pocket laboratory, blowpipe and procedures used in the analysis of minerals.

Christian Ehrenfried Weigel. (BORN: Staslund, Germany, 24 May 1748; DIED: Greifswald, Germany, 8 August 1831) *German physician & chemist.* Weigel had his early education at private school in Stralsund. In 1764 he matriculated at the University of Greifswald. From 1775 onwards, Weigel was professor of botany and chemistry at the University of Greifswald. He was the inventor of the counter current cooler (Liebig cooler). Weigel wrote and translated mostly on chemical subjects.

ENGLISH, George Letchworth. (BORN: Philadelphia, Pennsylvania, U.S.A., 14 June 1864; DIED: Rochester, New York, U.S.A., 1944) *American mineralogist & mineral dealer.*

In 1881, English graduated from the Friends' Central School in Philadelphia. Having attended the 1876 Centennial Exposition in Philadelphia, he had become interested in minerals. In 1887, he opened a mineral establishment and worked as an independent mineral dealer until 1903. Due to his expertise in the mineral monazite, English was offered a position with the Natural Light and Thorium Company, where he worked from 1903 to 1913. From 1913 to 1934, he was mineralogist for Ward's Natural Science Establishment in Rochester, N.Y. For the last decade of his life, he worked as a consulting mineralogist. English held memberships in the New York Mineral Club, the Academy of Natural Sciences, Philadelphia, Rochester Academy (president, 1919-21), and the Brooklyn Institute. He discovered the minerals penfieldite, graptomite, pyroxmangite and skemmatite, and the mineral species "Englishite" is named in his honor.

CATALOGUE OF MINERALS, 1888

VERY SCARCE. The first catalogue issued by this famous mineral dealing firm. It covers minerals for technical and commercial purposes, systematic collections, collections illustrating blowpipe analysis, hardness, microscopic study and fusibility. Also included are price lists for cabinet specimens, and specimens for Franklin, New Jersey, Colorado, Amelia Co., Virginia, Canada, North Carolina, Arizona, New Mexico, California and Europe.

2nd to 14th Editions: Descriptions of the subsequent separate editions of the *Catalogues* are listed below. However, the second through the fourteenth edition apparently were not published separately. Instead, between 1888 and 1890, English paid for their inclusion into issues of the rare mineralogical periodical, *The Exchangers Monthly*. They were published at the end of the issue, and sometimes, these lists would account for more than half of the total pages of each issue. Every catalog was introduced with a title similar to, "Geo. L. English & Co.'s Catalogue." No doubt this financial boon to the magazine helped the editor Arthur Chamberlain to keep the venture alive.

George L. English & Co. *American mineral dealing firm.* Founded in 1887 in Philadelphia by George English in partnership with a fellow Philadelphia mineral collector Edwin C. Atkinson. They had their shop at 1512 Chestnut Street, issuing their first catalog in 1888. By 1890, Geo. English & Co. had merged with the New York mineral dealer William Niven [1850-1937] to form perhaps the greatest mineral dealing firm of the time. The New York store address was 739 and 741 Broadway, however, by

1891, they had moved a few numbers down and had their shop at 733 and 735 Broadway. In 1892, English assumed sole control of the business, moving to new premises located at 64th East 12th Street in New York about 1893. Geo. English & Co. appears to have remained located at this last address until the stock was sold to Ward's Natural History Establishment of Rochester, New York in 1903. English appears to have continued actively dealing minerals, however, in 1905 he is listed as a dealer in minerals at 3 and 5 West 18th Street, New York. As a side note, Atkinson is listed in Philadelphia with a mineral collection as late as 1905.

descriptions of new minerals and/or occurrences.; 59-89, "Classified List of Mineral Species."; 90-100, "Index."

VERY SCARCE. From the Introduction: "Mineralogy has kept pace with allied sciences in the advances of the past ten or twenty years. The very great increase in the demand for mineral specimens, and the general centering of the business in the United States upon our house, have created a demand for a more elaborate catalogue of our stock, which we have endeavored in our present issue to satisfy."

"It is our earnest desire to have an unsullied reputation for integrity and justice, as we believe that upon no other basis can a permanent business be built up. The attention of parties who do not know of our standing is respectfully called to the list (on the following page) of distinguished mineralogists who kindly permit us to use their names for reference."

"The liberal support given us in the past has encouraged us to very materially increase our stock as well as our facilities for promptly filling the large orders entrusted to us. At the present time we have no hesitation in claiming that our stock is the largest, finest, most complete in species, and in every way the best, in the United States. The recent consolidation of the houses of George L. English & Co., of Philadelphia, and William Niven, of New York, into a new firm to be known as George L. English & Co., is already being recognized as a move to place the mineral business in the United States on the highest plane. It will be the constant aim of the new firm to keep *no poor material*, and while our efforts to secure the choicest of everything often compel us to buy at much higher prices than are commonly asked, an examination of our catalogue will show that our prices are almost invariably as low as or lower than those of other dealers, while the superiority of our material cannot fail to be noticed. This is because we study carefully the needs of all classes of our customers, confine our business wholly to mineralogy, and secure our material direct, personally, or by experienced assistants, visiting the localities and purchasing desirable material in large quantities."

Blank.

RARE. This is an important work in the study of
systematic mineralogy which complements the writings
of Agricola and Ercker. The author acknowledges a
debt to Agricola, but since the work is focused on
the medical uses of metals, stones minerals and gems,
he cites Pliny, Dioscorides and Serapion more often.
He repeats the ancient and medieval traditions and
beliefs with regard to gems, but sometimes regards
the mystical powers as suspicious. Throughout many
German names are provided together with an index
and mention is made of some German mines. Entzelt
is critical of Albertus Magnus for listening to much
to the chemists and censures him for belief in magic,
although he often ascribes powers to stones that are
not far of magical. Entzelt offers recipes for mixing
ink and for making shoe-black. He discusses crystals
used in spyglasses, the superpowers of stones found
in animals, German mining regions, fossils, gemstones and
amber. Throughout, Entzelt has much to say on the
classification and hierarchy of minerals and metals, and
illustrates his theories on numerous schematic charts
and on the three folding leaves that are rarely found
intact. The text is divided into three sections: metals
(pp. 1-72), semi-metals (pp. 73-155) and stones, earths
and gems (pp. 156-271).

Included at the beginning is a strong letter of

commendation from Philip Melanchthon [1497-1560] to
Egenolph, the printer at Frankfurt, dated 19 August
1551, recommending the book to be printed because it
contains material found nowhere else. Since the title
page is undated, this edition is ascribed to publication
in that year. In comparing multiple copies of the 1557
printing to this edition, it has been determined that
the text is from the same sheets in both edition, with
the only differences being on the title page and on
the folding table inserted at page 93. On this table
in the 1551 edition, line 6 from bottom ends "...quod
Dioscorides uo-" while the same line in the 1557 edition
ends "...quod Dioscorides."

ERCKER (Erckner, Erckel), Lazuras. (BORN: Annaberg, Saxony, c1530; DIED: Prague, Bohemia?, 1594) *German mining expert*.

From 1547 to 1548, Ercker was educated at Wittenberg University. In 1554, he obtained, through his wife's relatives, a post as assayer from the Elector

Augustus II at Dresden. From there on he moved through a succession of positions in mining, metallurgy and at the mint. After 1558 he moved to Prague where he wrote his best known book, *Die Beschreibung allfürnemisten mineralischen Ertz* (Prague, 1574), which brought him the attention of Emperor Maximilian. Ercker was appointed Courier of Mining and a clerk of the Supreme Court of Bohemia. The next Emperor, Rudolf II, made him Chief Inspector of Mines and ennobled him in 1586 with the title 'von Schreckenfels.'

VERY RARE. Together with AGRICOLA's *De Re Metallica* (1st ed., Basel, 1556), Ercker's treatise is the most authoritative and practical work on 16th century metallurgy and assaying. He provides a systematic review of methods of testing alloys and minerals and of obtaining and refining various metals. Also described are procedures for manufacturing acids, salts and other chemical compounds, including saltpeter and vitriol. Apparatus and laboratory equipment used in metallurgy and assaying as well as detailed accounts of laboratory procedures, all of which had been used by Ercker in his everyday work as inspector of mines.

Ercker was an accurate recorder of facts, not a builder of theoretical systems. He writes with amazing clarity, with completely realistic descriptions of the apparatus used and straightforward instructions for various laboratory operations. His treatment of the subject is basically the same as found in any modern treatise on fire assaying, and in fact his work remained the standard text for several centuries after its first appearance.

In five books Ercker defines assaying and what knowledge the practicing assayer should possess. The first book deals with silver ores, how to distinguish them and the apparatus required to perform accurate tests, and refine the resultant metal. Book two describes the same for gold and its ores, while book three covers copper. Book four concerns lead, bismuth, tin, antimony, mercury, iron and lodestone. Book five describes the preparation of saltpeter and the assay of vitriol from pyrite and alum in the ores of alum.

English transl., 1951: Lazarus Ercker's | Treatise On | Ores And Assaying | translated from the German Edition of 1580 | By | Anneliese Grünhaldt Sisco | and | Cyril Stanley Smith | [in red, ornament] | The University Of

Chicago Press • Chicago • Illinois. 8°: [ij]-xxxiii, [1], [1]-[360] p. Title page in red and black.

Translation by Anneliese G. Sisco and Cyril Stanley Smith [see notes below], which includes extensive notes by the translators and title page reproductions of all the earlier editions of Ercker.

Anneliese Grünhaldt Sisco. (BORN: 1900; DIED:) German/American metallurgist & chemist. For many years, Sisco was an associate editor of *Alloys of Iron Research* in New York. She worked as a translator for several early works dealing with metallurgy and mining.

Cyril Stanley Smith. (BORN: Birmingham, England, 1903; DIED: Cambridge, Massachusetts, U.S.A., 25 August 1992) British/American metallurgist & chemist. Smith received his Ph.D. in metallurgy from MIT in 1926. From 1927 to 1942, he worked in industry for American Brass Company, where he received some 20 patents. During WWII he worked in Los Alamos on the Manhattan project. After the war he became a professor of metallurgy and director of the Institute for the Study of Metals at the University of Chicago. From 1961 until 1969, he taught metallurgy at the Massachusetts Institute of Technology. In science, he was renowned for his research in physical metallurgy, particularly in areas such as the role of interface energy and topology in the structure of polycrystalline materials and the application of metallography to the study of artifacts. He is also remembered for his books and articles that bring to light historical aspects of metallurgy.

2°: π4):(3 A-Z6 Aa-Ee6 a-d6 e2; 176ℓ.; [16], 332, [4] p., engraved title (dated 1673), 41 woodcuts in the text (many close to the size of a full page). Berward: [4], 47 p. Title in red and black. PAGE SIZE: 301 x 192 mm

VERY SCARCE. Fifth edition, revised and enlarged, with new title and an added engraved title page dated 1673. This edition of 1672 has a preface to the reader with a set of verses, written and signed by 'Iohannes Hiskias Cardalucius,' who seems to have been the acting editor,

though he speaks of 'other skilled miners' being engaged in preparing the text. This is also the first appearance with Ercker's work of C. Berward's, *Interpres Pharseologiae Metallurgicae* (Wittenburg, 1673), which would be reprinted in all subsequent editions. The fine woodcuts, several of them full page, show mining and metallurgical operations of all kinds, including smelting and assaying, and give details of apparatus, furnaces and so forth that first appeared in the earlier editions, are used again here.

1554. 6th edition, 1684: *Aula subterranea domina dominantium subdita subditorum*. Das ist Untererdische Hoffhaltung, ohne welche weder die Herren regieren, noch die Unterthanen gehorchen können. Oder Gründliche Beschreibung derjenigen Sachen, so in der Tiefe der Erden wachsen, als aller Ertzen der königlichen und gemeinen Metallen, auch fürnehmster Mineralien ... zusamt anhängter auslegung der terminorum und red-arten der bergleute probirer, wardeinen und müntzmeister deren sie sich was ihre profession belangt, zu bedienen pflegen ... Franckfurt: J.D. Zunner, 1684.

4^o:)(4)(4 A-Dd4 Ee2 (A)-(Q)4 a-h4 i2; [16], 220, 123 [4], 68 p., illus, tables. Title in red and black.

VERY SCARCE. Sixth edition, edited by Johannes Hiskias Cardalucius, with an added engraved undated title page recut from that in the 1672 edition. Pagination commences anew at the start of the Third Book. This printing is distinguished from all other German editions as being issued in quarto instead of folio. It does, however, contain the annotations that first appeared in the 1672 edition, and the end a reprinting of Christian Berward's *Interpres Pharseologiae Metallurgicae* (68 p.).

REFERENCES: BL: [444.e.11.]. • Hoover Collection: no. 284. • NUC: 161, 220-1 [NE 0148236].

1555. 7th edition, 1703: *Aula subterranea, domina dominantium, subdita subditorum*. Das ist: Untererdische Hoffhaltung, ohne welche weder die Herren regieren, noch die Unterthanen gehorchen können. Oder Gründliche Beschreibung derjenigen Sachen, so in der Tiefe der Erden wachsen, als aller Ertzen der königlichen und gemeinen Metallen, auch fürnehmster Mineralien ... Anjetzo auff's neue mit vielen nützlichen und nothwendigen Stücken und Secreten so entweder Herr Ercker übergangen oder nach der Zeit merckit worden und andern notis über sel. Erckers Text mercklich vermehret, zu samt anhängter Auslegung der terminorum und Rede-Arten der Bergleute, Progiierer, Wardeinen und Müntzmeister, deren sie sich, was ihre profession belangt, zu bedienen pflegen [durch Christianum Berwardum] Zum viertenmahl gedruckt. Franckfurt am Mayn: J.D. Zunner, 1703.

2^o: [12], 916 (i.e., 196), [4], 39 p. Title in red and black.

VERY SCARCE. Seventh edition, with the title page's claim to being a fourth printing being an error. It contains the same text, edited by Johannes Hiskias Cardalucius, with an added engraved title page from the same plate as the 1672 quarto edition with a vignette and border to occupy the difference in page sizes. The contents appear to be identical to the 1672 edition, and Berward's *Interpres pharseologiae metallurgicae* is appended at the end (39 p.).

2^o: π^5 A-3G² a-i²; 129ℓ.; [10], 1-208, [4], [1]-36 p. Title in red and black. Added engraved title page. PAGE SIZE: 330 x 205 mm.

CONTENTS: Ercker's treatise: [Engraved title page]; [2 pgs], Printed title page, verso "Deut. cap. 8. vers. 7. & 9 | ..."; [4 pgs], Dedication, signed Johann David Jung, Autumn 1736.; [4 pgs], "Vorrede | Günstiger lieber Leser."; 1-208, Text.; [4 pgs], "Register.";

Berward's treatise: [1-2], Title page, verso blank.; [3-4], "Vorrede."; 5-36, "Bergläuffige Arten zu reden/ die dem Bau vorher= | gehen/ oder doch eiggentlich denselben nicht | betreffen."

VERY SCARCE. Eighth edition, with the designation as fifth edition on the title page being erroneous. This edition contains the annotations and text revisions of the 1672 edition and Berward's *Interpres Pharseologiae Metallurgicae* with separate pagination. A new section is added, designated the Second Appendix to the Fifth Book, which describes saltpeter plantations and the manufacture of gunpowder. This is illustrated with three additional woodcuts showing the recrystallization of saltpeter and the milling and graining of gunpowder.

ERDMANN, Axel Joakim. (BORN: Stockholm, Sweden, 12 August 1814; DIED: Stockholm, Sweden, 1 December 1869) *Swedish mineralogist & geologist.*

Graduated 1833 from Uppsala and studied at the Mining Academy at Fahlun 1837-38. He studied under Berzelius the winter 1839-40, and continued after this chemical mineralogical investigations in his own private laboratory. He became an instructor at the Mining Academy in Fahlun 1850. Erdmann turned more and more towards geology and became the first leader of Sveriges Geologiska Undersökning (SGU), the geological survey of Sweden, that he founded 1858. From this time on he devoted himself to the organization of the survey and initiated and outlined the geological mapping of Sweden. Apart from the purely mineralogical works below Erdmann wrote monograph like articles on some of the mineralogically interesting ore-fields in Sweden that were published in the Transactions of the Royal Swedish Academy of Science: *Försök till en geognostisk-mineralogisk beskrifning öfver Tunabergs socken* (1848), *Dannemora jernmalmsfält i Upsala län* (1850) and *Utö jernmalmsfält i Stockholms län* (1854). Moreover, he published also a handbook in petrology *Vägledning till bergarternas kännedom* (1855). [Entry by Johan Kjellman]

SCARCE. The book was written to fill the need of a Swedish handbook in mineralogy for higher education. Erdmann was well aware of the need for such a book and fit for the job as he at the time supervised the mineralogy, geology and mining courses at the Mining Academy in Fahlun, his former school. The last Swedish books in this category were the ones by Retzius (1795) and the uncompleted by Schwartz (1803), reminds us the author in the forward. It is divided in a general and a descriptive part. The first part is divided in the egenskaper and a short general discussion on systematics, the descriptive part is based on the system of Berzelius. ERDMANN, Edvard. (BORN: Stockholm, Sweden, 1 October 1840; DIED: Stockholm, Sweden?, 8 September 1923) *Swedish geologist & mineralogist.*

The son of Axel Erdmann. Followed in his fathers footsteps and became assisting geologist in the newly started geological survey, where he stayed and held different positions during his career. From 1871 until retiring he was responsible for the collections of the geological survey. Erdmann was actively trying to popularize the field of geology with several small books, pamphlets and articles in the subject, it is in this context his writings on mineralogy came to be.

ERNI, Henry. (BORN: Switzerland, 22 January 1822; DIED: Washington, D.C., U.S.A., 18 May 1885) *Swiss/American chemist & metallurgist.*

Erni was educated in an industrial school and the University of Zurich where he studied chemistry and other

ERSCH

sciences. In 1848, he emigrated to the United States and found work as BENJAMIN SILLIMAN's assistant in Yale's chemical laboratory in 1849. He became a professor of chemistry, mineralogy, French and German at the University of Tennessee in 1850, but resigned in 1852 due to overwork. In 1854, Erni went to the University of Vermont as professor of chemistry, toxicology and pharmacy in the Medical Department as well as professor of natural philosophy in the Academic Department. He took a position at Shelby Medical College in Nashville in 1859, but at the outbreak of the Civil War caused this job to evaporate. Hired as the first chemist in the Department of Agriculture in 1862, Erni studied the fermentation process and various soil types. In 1866, he became an examiner in the U.S. Patent Office, handling chemistry and physics inventions. President Grant appointed him consul at Basle, Switzerland in 1869. He remained there until 1878, when he returned to Washington, taking a succession of part time jobs. Erni was a founding member of the Chemical Society of Washington in 1884.

ERSCH, Johann Samuel. (BORN: Großglogau (now
Glogów), Silesia, Germany, 23 June 1766; DIED: Halle,
Germany, 16 January 1828) *German bibliographer &
geographer*.

In 1785 Ersch entered the University of Halle to
study theology, but soon became more involved with
history, bibliography, and geography. Beginning in 1788 he
published the first of many bibliographical works, for which
he is generally regarded the father of German bibliography.
In 1803 he accepted the chair of geography and statistics
at Halle, and in 1808 was, made principal librarian.

[Vol 2]

RARE. Edited by Johann Samuel Ersch, this is a general bibliography that includes science and natural history for the period 1785 to 1800. It is rich in citations for books and articles from journals and periodicals that were published in both Germany and foreign countries, and even includes the criticisms to which each book had been subjected. It is divided into 16 major subject divisions that were arranged into subsections: (I) Bibliography, (II) Linguistics, (III) Theology, (IV) Jurisprudence, (V) Medicine, (VI) Philosophy, (VII) Pedagogic, (VIII) Political science, (IX) War science, (X) Natural sciences including mineralogy, (XI) Economics, (XII) Mathematics, (XIII) Geography and atlases, (XIV) Art, (XV) Literature, and (XVI) General writings. Buried within the natural history and mathematics sections are citations to mineralogy, crystallography and associated sciences.

ERXLEBEN

ERXLEBEN, Johann Christian Polykarp. (BORN: Quedlinburg, Germany, 22 June 1744; DIED: Göttingen, Germany, 19 August 1777) *German naturalist.*

Erxleben was born the son of a theologian, and his mother would be the first woman in Germany to be awarded the degree doctor of medicine. Erxleben began studying medicine at Göttingen, but turned his attention to natural history subjects. He became a professor of physics at the University of Göttingen in 1771. He built a good reputation throughout Europe, and his classes at the university widely attended.

1573. — German, 1768.

Johann Christian Polykarp Erxlebens, | [...2 lines of titles and memberships...] | Betrachtungen | der | Ursachen der Unvollständigkeit | der Mineralsysteme. | [rule] | Nebst einer Anzeige seiner Vorlesungen. | [ornate rule] | Göttingen, | gedruckt bey Friedrich Andreas Kosenbusch, Factor. | 1768.

8°: $\pi^2 \cdot 2 \cdot 3^2 \chi^2$; 4 ℓ .; [1]-8 p.

CONTENTS: [2 pg], Title, verso blank.; [3]-8, Text.

VERY RARE. This work considers reasons why no correct mineral system had yet been devised. The author attributes this dilemma to two problems. The first was that no one had yet accurately investigated minerals from a chemical standpoint, and the second was that a very few, true species of minerals had been endlessly mixed in the earth, resulting in a seemingly endless variety of species to the mineralogists.

Anfangsgründe der Naturgeschichte. Zum Gebrauche Akademischer Vorlesungen. Von Johann Christian Polykarp Erxleben ... Göttingen und Gotha, Bey Johann Christian Dieterich, 1768.

2 vols. [VOL 1] 8°: *⁸ A-R⁸; 144 ℓ .; [16], 271, [1] p. [VOL 2] 8°:)(⁴ A-R⁸ S⁴; 145 ℓ .; [8], 281 (i.e., 279), [1] p. Pages 216-217 omitted in numbering; pages 93-112 numbered 39-58.

VERY RARE. This popular and influential introduction to natural history went through over half a dozen issues before the close of the 18th century. A bibliographer at heart, Erxleben provides many references for further reading, while describing the animal, mineral and vegetable kingdoms. After his death, Johann Friedrich Gmelin [see note below] took on the role of editor in 1782, and in this capacity continued to issue the text with references to the latest discoveries.

ESPER, Eugen Johann Christoph. (BORN: Wunsiedel, Germany, 2 June 1742; DIED: Erlangen, Germany, 27 July 1810) *German zoologist.*

Esper was active as a professor for philosophy and as a director of the material assets collection of the University of attaining and published from 1776 to [1830] its famous work *Die Schmetterlinge in Abbildungen nach der Natur mit Beschreibungen*. Esper's scientific work concentrated on systematics, taxonomy, fauna and bio-geography.

Lehrbuch | der | Mineralogie | in | kurzem
Auszug | der | neuern mineralogischen Systeme
| zum | Gebrauch academischer Vorlesungen | und
Einrichtung mineralogischer Sammlungen | von |
Eugenius Johann Christoph Esper, | [...13 lines of
titles and memberships...] | [tapered rule] | Erlangen,
| bey Johann Jacob Palm. | 1810.

8°: π^4 A-Z⁸ Aa-Gg⁸ [Hh⁸] Ii⁴ Kk³; 259ℓ.; [i]-viii,
[1]-510 p., index. PAGE SIZE: 197 x 115 mm.

CONTENTS: [i-ii], Title page, verso blank.; [iii]-viii,
"Vorbericht."; [1]-472, Text.; 473-510, "Namen Register."

VERY SCARCE. Based upon the specimens in the mineralogical museum of the Friedrichs-Alexanders University in Erlangen, of which Esper was curator. The author attempts to create a new mineralogical classification that is based upon Leonhard, Merz and Kopp's *Systematisch-Tabellarische übersicht und charakteristik der Mineralkörper* (Frankfurt am Main, 1806). Whereas the earlier work was essentially theoretical, Esper applies the theory to the mineral collection in a practical treatment. Esper provides the standard data for each mineral species including species, family, name, synonyms (mostly from Gmelin's translation of Linneaus), localities, chemical characters, petrifications are treated separately, characteristics based on the works of Emmerling, Estner, Suckow and Reuss. The book has a short introduction that defines terms, while the remainder is devoted to the description of the species.

VERY RARE. Designed for the beginner and lover of
minerals, Estner's work explains Werner's theories. The
author was a devout disciple of Werner doctrine and this
exposition of his theories is one of the most extensive
and rarest of the treatments. Estner relied upon the
mineral collections of Vienna for source material in his
mineral descriptions. According to the title pages of the
various volumes, he also paid the costs of printing and
hence the extreme difficulty in obtaining copies of this
work.

EVERS, Heinrich. (BORN: ; DIED: Hamburg,
Germany, c1768) *German merchant*.

Evers was a trader in Hamburg. He accumulated
what was called a 'handsome' natural history collection
including minerals.

1583. — German, 1768 [Sale catalog].

Verzeichniß einer sehr ansehnlichen Sammlung
von Naturalien aus allen Reichen der Natur,
welche nach dem seligen Ableben ihres ehemaligen
Besitzers Herrn Heinrich Evers ... entweder
unzertrennt oder durch eine öffentliche Auction
am 7ten März und folgende Tage 1768 öffentlich
an die Meistbietenden verkauft werden sollen ...
Wöniger. Hamburg, gedruckt bey Johann Lucas
Conrad König, 1767.

8°: xii, 128 p., frontispiece (portrait).

RARE. Auction sale catalog of Evers' comprehen-
sive natural history collections, including a substantial
quantity of mineralogical specimens. The sale began on
March 7th, 1768 and continued on the following days
until all lots were sold. The compiler of the catalog was
Wöniger.

EXCHANGERS' MONTHLY.

1584. — English, 1885-90 [Periodical].

The | Exchangers' Monthly | Devoted to |
Mineralogy, Geology, and Archæology. | ... |
Published by Thos. Chamberlain, Jr., Jersey City,
N.J., 1885-1890.

Vol. 1, no. 1 (November 1885)-vol. 5, no. 10
(October 1890).

VERY RARE. Despite the title's broader scope,
most of the articles of this periodical were mineralogical
in content, reflecting the editor Arthur Chamberlain's

EXCHANGERS' MONTHLY, 1885

own collecting preferences. The first number of *The Exchangers' Monthly* appeared in November, 1885, the subscription price being twenty-five cents per year. It was a modest little publication, trim in appearance that lasted for five years. The name of the magazine was then changed in November, 1890, to *The Mineralogists' Monthly* [which see], and the price advanced to fifty cents per year.

Arthur C. Chamberlain. (BORN: ; DIED: after 1916) *American publisher.* Chamberlain was the owner of The Chamberlain Printing Company of Jersey City, New Jersey, which operated from the 1890s to at least 1909. He was an enthusiastic mineral collector, and involved in the editing and publishing of several American magazines devoted to the hobby.

EXNER, Franz Serafin. (BORN: Vienna, Austria, 24 March 1849; DIED: Vienna, Austria, 15 November 1926) *Austrian physicist.*

Educated at the University of Vienna (Ph.D., 1871), Exner was a founder of modern experimental and theoretical research in atmospheric electricity. He studied the contact potentials between heterogeneous substances and developed a theory to explain them. He wrote a highly esteemed textbook on the spectra of the elements. Exner was also an early supporter of Helmholtz's three component theory of color.

UNTERSUCHUNGEN ÜBER DIE HÄRTE, 1873

Untersuchungen | über die | Härte an Krystallflächen. | Eine von der kaiserl. Akademie der Wissenschaften zu Wien | gekrönte Preisschrift. | Von | Dr. Franz Exner, | Assistenten am physikalischen Institute der Universität Strassburg. | [ornate rule] | Wein. | Aus der k.k. Hof- und Staatsdruckerei. | 1873.

8°: [2], [1]-166 p., 68 plates.

VERY SCARCE. Hardness as it applies to minerals was a subject thoroughly investigated by Exner in his important *Untersuchungen über die Härte an Krystallflächen*. After providing a short historical introduction to previous investigations into the hardness of minerals, Exner attempts to place the study on firm scientific foundations. Hardness had previously been a physical characteristic that had been a relative measure between two or more mineral species. Now however, Exner described the forms of hardness across the faces of many crystals in a series of curves of hardness. He obtained the measurements by determining the least amount of weight required to scratch a crystalline surface in different directions for each 10° or 15° from 0° to 180°, as determined by a sclerometer (an instrument used to measure hardness). These directions are laid out as radii from the center, and the length of each is made proportional to the weight fixed by experiment. These points are then connected, and a specific hardness diagram for the mineral determined.

De Metallicis | Rebus Ac | Nominibus Ob= | Servationes Variæ | & eruditæ, ex schedis Georgij Fabri- | cij: quibus ea potissimum ex- | plicantur, quæ Georgius | Agricola præ- | terijt. | [ornament] | Tigvri M.D.LXV.

8°: a-d⁸ e²; 34ℓ.; no pagination. PAGE SIZE: 165 x 100 mm.

CONTENTS: alr, Title page.; alv, Table of contents.; a2r-a3r, Epistola, dated 1566.; a3v-e2v, Text.

RARE. This succinct treatise, which cites many classical sources, provides descriptions of the noble and base metals. It consists of eleven chapters that describe gold, silver, lead, copper, tin as well as various alloys and oxides. The debt owed by the author to Agricola is noted on the title page and in the introductory letter. This letter written by Johannes Kentmann is dated 1566, although the title page is dated 1565, and together with the separate foliation provides evidence that this work was issued separately, as well as included in Conrad Gesner's *De Omni Rerum Fossilium* (Tigvri, 1565).

German transl., 1913: Contained in: J.M. Eder, *Quellenschriften zu den frühesten Anfängen der Photographie bis zum XVIII. Jahrhundert herausgegeben und mit Erläuterungen versehen*. Halle an der Saale, Wilhelm Knapp, 1913. 4°: [4], 187 p., 7 plates. Printed stiff wrappers.

Scarce. Within this survey of early writings concerning photography from the middle of the 16th century into the latter part of the 18th century, there is a translation of a portion of Fabricius' work, with an explanation by Eder as to the significance of the information to the later invention of photography. The text is presented in the original Latin of Fabricius along with a German translation. There is also a reproduction of title page of the *De Metallicis Rebus*.

8°: a⁸ b⁴ A-P⁸; 132ℓ.; xvii, v, 236, ix p., one folding plate, woodcut initials, ornaments and tail-pieces. Title page printed in red and black. Gothic type. PAGE SIZE: 152 x 95 mm.

VERY RARE. This first edition is not cited in many of the standard bibliographies, although Ferguson knew of its existence and Darmstaedter gives a good description. The preface to the work is dated 1567 and was published by his son Louis Wolfgang Fachs. Incredibly, the work suggests that when tin and lead are heated they increase in weight. It was not until Lavoisier demonstrated this fact in 1772 that it was accepted by the scientific community, but here Fachs clearly describes weight increase of metals during calcination. As the master assayer of the mint for the Prince of Anhalt, Fachs devotes large sections of his text to describing the testing, refining and assaying of gold and silver, while another portion describes managerial aspects of the mint's operation.

Other editions: The British Library has editions of 1669, 1678 (7th ed., Leipzig, Groß, 1678. [22], 173 p., [10], 49, 142 p., one folding table) and 1689 (Leipzig, Gedruckt im Jahr 1689. a⁸-b⁸ c⁷; 23ℓ.; [2] 3-39, [7] p.). Ferguson describes an edition of Leipzig, 1622 and notices editions published in Leipzig of 1636, 1671 and 1680 and an Amsterdam edition of 1669. Clearly a popular and much reprinted work.

BEYTRÄGE, 1785

FALCK, Johan Peter. (BORN: 1733?; DIED: March 1774) *Swedish naturalist.*

1594. — German, 1785-6.

Herrn Johann Peter Falk | [...3 lines of titles and memberships...] | Beyträge | zur | Topographischen Kenntniß | des | Rußischen Reichs. | [rule] | Erster Band, | [rule] | welcher | die Geschichte seiner Reise von den Jahren 1768 bis 1773 und Beyträge zu | physikalischen und politischen Erdbeschreibung &c. enthält. | [rule] | St. Petersburg, | gedruckt bey der Kayserl. Akademie der Wissenschaften, 1785.

3 vols. [VOL 1: 1785] 4°: viii, xii, 402 p. [VOL 2: 1785] 4°: vi, 282 p. [VOL 3: 1786] 4°: iv, 283584, xxxvi p., 2 folding engraved maps, coloured in outline, 44 engraved plates (many folding).

VERY SCARCE. This work was compiled and edited by JOHANN GEORG GEORGI from Falck's notes after his suicide in 1774. Originally the work was planned to be published in two volumes but, owing to an increase in the amount of material the second volume was divided into two. Falck was a disciple of Linnaeus and plans were made for him to accompany Forsskål to Arabia and in Forsskål's company he arrived in Copenhagen in 1760, but his services were not required. In 1763 plans were made for him to gain employment in St. Petersburg as head of the natural history collection of the Russian State Councilor Kruse. In 1768 an expedition to Eastern Russia and Siberia was arranged,

FALLOPPIO

in which Falck was included. The expedition traveled into Siberia via Astrakhan and Orenburg via Kolyvan and Tomsk almost reaching the Mongolian border in 1772, but Falck was then ordered to return to St. Petersburg. All along he had been collecting material. For a short time he accompanied PETR SIMON PALLAS and Georgi in their travels. Having made it to Kazan Falck committed suicide in March, 1774. A decade later Georgi edited Falck's diaries and note into the *Beyträge*.

The work begins with Falcks summary account of the journey followed by a geographical description of scenery and life in the areas covered in Russia and Siberia, a map, hydrological and mineralogical observations, lists of plants arranged according to the sexual system, an extensive Russian-Siberian fauna and an account of various peoples encountered. Of particular value is Falcks elaborate description of the South-Russian steppe. Falcks *Beyträge* was a distinguished scientific achievement and a fitting monument to its unfortunate author. The contents of the volumes are as follows: 1. History of the trip from 1768 to 1773 and an examination of the physical and political geography of the regions transversed. 2. Describes the various types of water, rocks, minerals, fossils, and plants encountered. It includes several illustrations. 3. Deals with the fauna and various Asian ethnic groups encountered. It also contains an index to the entire work and illustrations of animals, people and tools.

FALLOPPIO, Gabrielle. (BORN: Modena, Italy, 1523; DIED: Padua, Italy, 9 October 1562) *Italian physician & naturalist.*

Falloppio was one of the most important physicians of the 16th century. He was born to a noble but very poor family, and it was only through great hardship that an education was obtained. He studied medicine at Ferrara, and after taking his degree he worked at various medical schools before becoming professor of anatomy at Ferrara, in 1548. The next year he went to the Pisa, the most important university in Italy. In 1551 Falloppio was invited to occupy the chair of anatomy and surgery at Padua. Though he died at an early age, he had made his mark on anatomy. He studied the organs of generation in both sexes, and his description of the canal or tube which leads from the ovary to the uterus attached his name to the structure (Fallopian tubes). He published only one work dealing with anatomy during his lifetime. All other books attributed to him were published from his manuscripts after his death by his devoted students.

4^o: a-d⁸ e⁴ A-Y⁸; [36], 176ℓ., title vignette (woodcut of chemical apparatus). PAGE SIZE: 207 x 150 mm.

RARE. Edited by Andreas Marcolini. Published posthumously, the text consists of two lectures delivered at the University of Padua in 1556 and 1557. Much of the book is on geology and mineralogy, where his views on the origin of mountains, and fossils are described. The title woodcut shows chemical apparatus.

Falloppio's lectures on mineral waters given in

Padua in 1556 were published posthumously together with his lecture on minerals given in 1557. Falloppio's work criticizes Savonarola and others for their statements about minerals found in springs. It pictures a still and a chemical examination of water according to 'modern physicians.' — Partington.

Falloppio's lectures on thermal and medicinal springs and also on 'fossils', i.e. both paleontological remains and minerals and earths. These essays were collected and edited for publication after Falloppio's death in 1562 by his pupil Andrea Marcolino. The emphasis of this work is largely geological; the origin of springs and fountains, the nature of subterranean fire and generation of heat within the earth, and the vexing question of the origin of fossils. 'Falloppio, as one of the great line of Paduan anatomists, would have been well aware of organic resemblances in whatever fossils he was familiar with; yet he felt that their occurrence on hilltops far from the sea made their organic origin unacceptable. It would have entailed changes in geography that were literally incredible, even with an Aristotelian view of continuous terrestrial change; and an explanation in terms of spontaneous generation therefore seemed preferable' (M.J.S. Rudwick, *The meaning of fossils*). Falloppio also describes many individual springs, their geology, the nature of their waters and their medicinal virtues. He performed analyses to determine the mineral contents of various springs.

It was published after his death, based on the notes that the famous typographer Marcolini had taken at his lessons in Padua university. It deals with the origin of springs and fossils, thermal baths and their properties, geology, and the medical virtues of various spring waters. He denies that thermal baths would help changing sex, and prescribes not to bathe in leap years, criticising Montagnana and Savonarola. FAUJAS

FAUJAS DE SAINT-FOND, Barthélemy. (BORN: Montélimart, France, 17 May 1741; DIED: Saint-Fond, France, 18 July 1819) *French geologist.*

Faujas was a friend of Buffon, through who's influence he obtained an appointment at the Museum of Paris and commissioner of mines. He extensively explored France, England, Germany, Italy, etc. In 1793, he was made professor of geology at the Jardin des Plantes.

RARE. While exploring the hilly region of Vivarais and Velay in east-central France, Faujas recognized ancient basalt flows and their associated mineralization; however, there were no active volcanoes in the area. After mineralogically comparing the rocks and minerals found in France with specimens collected near active volcanoes, Faujas presents his conclusions in the *Recherches*, in which he showed decisively the volcanic origin of basalt. Although the neptunists would continue to show contrary evidence, Faujas conclusions were so convincing that it helped crush the thought that basalt formed through sedimentary processes once and for all. The *Recherches* also gives excellent descriptions and illustrations of the extinct volcanoes in France which Zittel says "have scarcely been surpassed in later publications."

sources. Of the twenty chapters, the first fifteen contain Faujas' observations and ideas about basalt. In particular, he enumerates and relates the mineral species found in ancient basalt fields to those minerals found near Mt. Ætna and clearly a product of that volcano's geological process. He subsequently draws the correct conclusion that they formed in similar fashion at both locations. This is reinforced at the end of the text with Faujas' description of specimens collected by Dolomieu from Mt. Ætna.

VERY SCARCE. Describes a trip taken through Great Britain in 1784. "In 1784 Faujas journeyed through England to Scotland; a full account was published in 1797. He narrated entertaining details of his travels and described arts, industries, and customs, but his most important observations were geological. He realized the volcanic nature of the basalt of the Inner Hebrides and paid special attention to the spectacular columnar occurrence on the isle of Staffa, about which his curiosity had been aroused by Banks's account in Thomas Pennant's *Second Tour of Scotland ...* (1774)" (DSB). In volume II there is a description of Faujas' visit to Joseph Black (pp. 267-262). The attractive plates include Fingal's cave and the interior of the house of McNab, the owner of a number of fragments of Ossian's poems. James Mcpherson's so called 'translation' of Ossian's 'Fingal' had been published in 1763 and ecstatically received throughout Europe.

VERY SCARCE. Translated from the French by J. Macdonald and augmented by C. Wiedemann. "His visit was made in 1784. While not romantically inclined, he was sympathetic and tried to understand the life, manners, and culture of the Scotch. But the geologist usually takes the place of the picturesque traveler" (Cox).

Essai de Géologie, ou Mémoires pour servir à l'Histoire Naturelle du Globe, par B. Faujas St. Fond. Paris, Levrault, Schoell et Compagnie, 1805-9.

2 vols. bound in three. [VOL 1: 1805] 8°: [4], 493, [1] p. [VOL 2, pt. 1: 1809] 8°: [4], [1]-400, [2] p. [VOL 2, pt. 2: 1809] [4], [401]-731, [3] p., 30 engraved plates (some folding; 5 printed in color).

VERY SCARCE. This is the first appearance of Faujas' last work, which contains a summation of his life-time study and research of paleontology, geology, mineralogy and vulcanology. Volume one is devoted almost exclusively to fossils and Faujas gives a summary of the known species of fossil fishes and the localities in which they occurred. The first part of volume two is concerned with minerals and it is beautifully illustrated with five engraved and colored plates of minerals. The second portion is devoted to Faujas' final thoughts on the nature and origin of volcanoes.

Contents: 1. Animal and vegetable fossils. 2, pt. 1. Minerals. 2, pt. 2, Volcanoes.

Catalogue Systématique et Raisonné, ou Description du Magnifique Cabinet appartenant ci-devant à M. le C. de * * *. Ouvrage intéressant pour les Naturalistes et pout les amateurs de l'Histoire Naturelle, à cause de sa Nomenclature et de la Nouvelle Méthode de Conchyliologie, de Polyptologie, de Zoophytologie, d'Ichtyologie, etc. à laquelle on

FELDMANN

a ajouté la Synonymie Spécifique du Système de Linné ... le tout enrichi de figures en tailles douces, dont la plupart des objets n'ont pas encore été gravés. Par M. de * * * ... Paris, de l'Imprimerie de Quillau, 1784.

8°: [2], [v]-xii, 558, [2] p., frontispiece, 9 plates (signed J. Jaminet de après Guil. de Favanne). The "Errata" of 2 pages follows page 558. In some copies, the 9 plates are hand colored.

RARE. Favanne compiled this catalog of the cabinet of Comté de La Tour d'Auvergne. He purchased specimens from the Davila sale of 1767. It is formed around a general natural history theme. This catalog is composed of 2,235 numbered lots, rich in stuffed animals, perserved fish, coral, shells and minerals, all arranged according to the system of LINNEAUS. The sale occurred on the 19th April 1784 in Paris.

8°: π^2 A-K⁸ L⁵; 87 ℓ .; [4], [1]-170 p. PAGE SIZE: 184 x 100 mm.

CONTENTS: [1 pg], Half title page, "Catalogus | des | Feldmannschen Naturalien=Cabinets. | [rule] | Die Auction geschiehet zu Berlin im Monath | August 1785."; [1 pg], Title page in French.; [1 pg], Title page in German.; [1 pg], "Vorbericht."—signed Feldmann, 1 May 1785.; [1]-169, Text.; 170, "Anhang."

VERY RARE. Auction sale catalog of Feldmann's cabinet of natural history objects, which occurred several years after his death. The cabinet contained 9000 shells, 1200 mineral specimens including 340 pieces of amber, 3000 stones and petrifications, 1000 polished or ornamental stones which included 600 fossils, 1052 samples of wood, and a smaller selection of instruments, stuffed animals, and other curiosities. The title indicates that if a buyer could not be found for the entire cabinet before 1 August 1785, the collection would be sold piecemeal later that month. According to a manuscript notation in the copy examined, the sale actually began on 15 September 1785 and continued on the following days. This delay suggests that there may have been an effort to secure the entire assembly but because the auction happened that the last minute

attempt failed.

FERBER

FERBER, Johann Jakob. (BORN: Carlsrona, Sweden, 9 September 1743; DIED: Bern, Switzerland, 12 April 1790) *Swedish mineralogist.*

Ferber studied under A.F. CRONSTEDT, J.G. WALLERUS and C. LINNÆUS at the University of Uppsala. He then traveled extensively exploring the mines of Germany, France, and Italy. In 1774, he was appointed professor of natural history and philosophy at the University in Mittau. In 1783, he relocated to St. Petersburg, and then in 1786 he entered the service of the King of Prussia.

SCARCE. Ferber's first book is the account of his geological travels through Italy. Like many of his later works, the format of the text is as a series of 26 letters addressed to another mineralogist, Ignatz Elder von Born, who also wrote the forward. The letters describe diverse natural phenomena encountered in Ferber's travels throughout the region of southern Austria and northern Italy, but especially observations on mining, geology and mineralogy. Included are descriptions on the occurrences of specific species including marble, gypsum, jasper, as well as remarks on the ancient ruins

FERBER

of the area and observations on the mountains, volcanoes and fossils.

Rudolph Erich Raspe. (BORN: Hannover, Germany, 1737; DIED: Muckross, County Kerry, Ireland, 1794) *German geologist*. Raspe studied science and philology and worked as a librarian for several universities before fleeing to England in 1775 after pilfering some gems that were supposedly in his care. He worked at the Dolcoath Mine, Camborne, where he wrote his famous tale *The Surprising*

Adventures Of Baron Munchhausen as well as discovering in St. Agnes a new tin-bearing sulphide, stannite. In 1791 he had to move again (to Ireland) after his involvement in a mining swindle in Scotland.

SCARCE. This work, one in an important series by Ferber, went a long way in constructing the foundation for future geological studies of the Austro-Hungary empire. Divided into three parts the author first lists each mining operation in Bohemia. The second describes in detail nineteen operating mines in the area, giving details of their operation and production. The final section discusses the legal rights of the nobility versus the landowners regarding the mineral wealth of the area.

Physikalisch – Metallurgische Abhandlungen über die Gebirge und Bergwerke in Ungarn, von Johann Jakob Ferber ... Nebst einer Beschreibung des Steirischen Einschmelzens und Stahlmachens, von einem Ungenannten. Mit kupfern ... Berlin und Stettin: Bey F. Nicolai, 1780.

8°: [16], 328 p., 4 folding plates.

SCARCE. The present work, one of author's most influential, helped to lay the ground work of the geological investigation of the Austrian-Hungarian empire. Described here in full detail are the mineral resources of the countries together with information about mining procedures and the output of various mines. The plates illustrate various mining operations.

FERRARA, Francesco.

Intended for a career with the church, Ferrara became interested in science after witnessing an eruption of Etna. Afterwards he focused his attention natural history, graduating from the University of Catania in 1786 with degrees in medicine and philosophy. He corresponded with DOLOMIEU and SPALLANZANI. After graduation Ferrara continued his theological studies and was ordained a priest in 1792. In 1802 he was appointed professor of physics at the University of Catania.

FERSMAN, Aleksandr Evgenievich. (BORN: St. Petersburg, Russia, 8 November 1883; DIED: Sochi on the Black Sea, Russia, 20 May 1945) *Russian mineralogist, crystallographer & geochemist.*

Fersman studied under V.I. VERNADSKI. In 1907, he graduated from Moscow University, and immediately continued his studies with F.A.A. LACROIX in Paris and the Norwegian geochemist Victor Moritz Goldschmidt [1888-1947] in Heidelberg. In 1909, he began teaching at Moscow University, and in 1910 he became a professor at the People's University, where in 1912 he introduced a course in geochemistry. Also in 1912, Fersman was appointed

FEUCHTWANGER

professor of mineralogy in St. Petersburg and senior curator of the Mineralogical Museum of the Academy of Sciences. Fersman was an investigator of incredible industry, and his studies include the mineral resources of the Urals, Crimea, Caucasus, Kazakhstan, Tukestan, the Altai, Transbikalia, northern Mongolia, Karelia and the Kola Peninsula. From this work several discoveries of major economic mineral deposits were made.

[Vol 2] [2 pgs], Title page, verso blank.; 43 plates.

VERY SCARCE. Co-authored with VICTOR GOLDSCHMIDT. This is one of the best authorities on the morphology of diamond crystals as well as other features of this unique mineral species. The first part treats the general properties of diamonds including crystallography and etch figures. The second part gives an historical overview of previous investigations and includes a long bibliography. The last section describes the morphology of crystals including diamond twins. Etch figures are described including methods of developing them. The atlas is remarkable giving shaded crystal drawings and other figures rendered from actual stones. Altogether there are 292 figures of diamond crystals and associated figures.

Victor Goldschmidt. (BORN: Mainz, Germany, 10 February 1853; DIED: Salzburg, Austria, 8 May 1933) *German mineralogist & crystallographer.* Goldschmidt began as a student of metallurgy at the Industrial Academy in Berlin and the Freiberg Bergakademie, but in 1880, he graduated with a Ph.D. in mineralogy from the University of Heidelberg. In 1888, he married Leontine Porjes, who supported her husband and his students. In 1888, Goldschmidt also became a faculty member of the University of Heidelberg. There he founded the Mineralogical-Crystallographic Institute.

FEUCHTWANGER, Lewis. (BORN: Fürth, Bavaria, Germany, 11 January 1805; DIED: New York City, New York, U.S.A., 25 June 1876) *German/American physician, chemist & mineralogist.*

In 1827, Feuchtwanger received his M.D. from the University of Jena, and he emigrated to the United States in 1829. He eventually ended up in New York City where he opened a pharmacy. However, he turned his attention to chemistry, and developed an alloy of nickel, copper and zinc known as "German Silver." He convinced the government to mint some one-cent and three-cent specimens using his alloy, and today these are highly sought after by numismatists. Lewis' father was a mineralogist, and the son retained his interest, building a large collection and becoming a dealer in minerals and gems. He exhibited his collection at the Great Exhibition, London, 1851 and the Industrial Exhibition, London, 1862, where a portion was sold. From the 1850s to the 1870s, Feuchtwanger

obtained and sold commercial quantities of minerals and ores, opening a plant in New York to prepare chemical preparations from the raw material.

In 1832, Feuchtwanger offered his cabinet of minerals and other objects of natural history for sale, either in its entirety or piecemeal. Included were a large wax yellow Baltic amber weighing almost 2lbs., an American beryl weighing 70lbs., three collections of precious stones, and three collections of minerals containing 160, 350 and 940 specimens. Apparently, the collection was not completely dispersed as Canfield (1923) records that his daughters presented his collection to the Society of Ethical Culture in New York City about 1900.

8°: [A-B]⁴ C-X⁴ Y²; 90ℓ.; [i]-vi, [2], 9-178, [2] p., 25 woodcut illus (6 numbered). PAGE SIZE: 135 x 220 mm.

RARE. As the first treatise on gemology published in the United States, this volume is surprisingly readable and accurate in its stone descriptions. It begins with general information about the properties of minerals like form, cleavage, fracture, hardness, color, specific gravity, etc. The work continues with a discussion of the minerals that are considered gems such as diamond, sapphire, chrysoberyl, topaz, etc. The descriptions each contain information about the stones history, physical properties and known localities. An appendix contains descriptions of pearls and coral. The work ends with an index to the stones described.

[Part 2] [413-414], Title page, verso blank.; [415]-730, Text.

RARE. Zittel says "the present work is devoted chiefly to a careful enumeration and description of the eruptive rocks in the Carpathians. He distinguishes volcanic outbreaks, with which superficial lava flows are associated, from volcanic upheavals, in the course of which wide regions are affected, and masses of igneous material are intruded in the crust. It can easily be understood that Fichtel's work met with an incredulous reception by Werner and his adherents." Fichtel included not only basalt but all granitoid, gneissose, schistose, and doleritic series as igneous in their origin. He was able to distinguish two kinds of volcanic mountains: 1) those which consist of immense uniform masses, sometimes building up a whole mountain-chain, and 2) those in which rocks of different constitution alternate with one another in a stratified way.

MINERALOGISCHE AUFSÄTZE, 1794

DIE MINERALOGEN, 1792

1661. — German, 1794.

Mineralogische | Aufsätze | von | Johann Ehrenreich von Fichtel, | [...4 lines of titles and memberships...] | [rule] | [rule] | Wien, | gedruckt, bey Mathias Andreas Schmidt, | kaiserl. königl. Hofbuchdrucker. | [rule] | 1794.

8°: π^3 A-Z⁸ 2a⁴; 200 ℓ .; [6], [1]-374 p. PAGE SIZE: 217 x 137 mm.

CONTENTS: [2 pgs], Title page, verso blank.; [2 pgs], "Erinnerung."; [2 pgs], "Ordnung | der | abgehandelten Gegenstände."; [1]-374, Text.

VERY SCARCE. This work is concerned with all sorts of mineralogical and geological matters. It is divided into 25 chapters, some of which concern: iron ore deposits, manganese dioxide, Transylvanian gold deposits, the origins of ore deposits, much on volcanic

1663. — German, 1792.

Die Mineralogen | gegen | das Ende | des | achtzehnten Jahrhunderts. | [tapered rule] | [...2 lines of quotation, signed Seneca de ira...] | [rule] | Frankfurt und Leipzig | 1792.

8°: π^1 A-H⁸ I²; 66 ℓ .; [2], [1]-130 p. PAGE SIZE: 194 x 98 mm.

CONTENTS: [2 pgs], Title page, verso blank.; [1]-130, Text.

RARE. Although published anonymously, this remarkable work has since been attributed to Johann Ehrenreich von Fichtel. Probably frustrated by the confusion of the mineralogical science in the 1790s, the author penned this sharp satire that attempts to classify mineralogists based upon their own theories. Within the 48 groupings, Fichtel recognizes

“systematics” who classify everything even if it is not a mineral, “geometristen” who view the world through angles, “sexulaists,” “antirevoluzionisten,” “ignivomists,” “neptunists,” “neutralists,” “skepticts,” “orthodox,” etc. A very humorous and biting commentary on the mineralogical science of the time.

Reprint, 1993: *Die Mineralogen gegen das Ende des 18. Jahrhunderts*. 1. Auflage, Nachdruck des von ... 1792 in Frankfurt und Leipzig erschienenen Originals. Mit einem Nachwort von Hans Prescher und Peter Schmidt. Leipzig, Deutsche Verlag für Grundstoffindustrie, 1993. 84 p. Published as: *Freiberger Forschungshefte*, D: Historische Bergbau, no. 199.

Regimentshaus (about 1800) and a reproduction of a view of Museum Richterianum. Tafel 15. Zwingerhof (about 1754) and a plan of the Naturalienkabinetts in Zwinger. Tafel 16. Zwingerhof (about 1758) and a view of Schloßturn in Zwinger (early 1800's). Tafel 17. Reproduction of early plates showing various vessels and jars (2 figures). Tafel 18. Reproduction of a 1719 engraving showing a parade of miners in Dresden. Tafel 19. Emerald specimen from Columbia and a wire silver specimen from Schneeberg.

Tafel 20. Specimens of various silver containing minerals (4 figures). Tafel 21. Fossils (2 figures). Tafel 22. Fossils (3 figures). Tafel 23. Fossils (1 figure).

VERY SCARCE. Excellent, thoroughly detailed history of mineralogy from 1550 to 1817 of the very important mining district of Saxony, Germany. It is written from the viewpoint of the mineralogical collections of Dresden, and contains information not easily found in other references. The work contains sections dealing with the contributions of Agricola to mineralogy and geology (pp. 1-28); the representation of mineralogy in the royal collections of Dresden (pp. 29-49); the establishment of independent mineral

cabinets and their development under Johann Heinrich von Heucher (pp. 50–74); the inspectors of the mineral cabinet to the year 1746 (pp. 75–92); the amber cabinet (pp. 93–103); the continued development of the collections from 1746 to 1778 (pp. 104–138); the transition of the mineral cabinet to scientific institution during the period 1778 to 1819 (pp. 139–186). The remainder of the book gives 983 notes referenced in the text and indexes to the names and subjects mentioned. An extremely valuable reference work to the history of mineralogy in Germany.

VERY RARE. The descriptive catalog of Pavel Grigorievich Démidoff's [see note below] mineral collection is given within this volume. It lists 3,850 specimens of minerals, rocks, fossils and gemstones that were contained within a general natural history cabinet. The plates illustrate minerals and fossils. The collection was subsequently acquired by the University of Moscow.

The description of the mineral collection is contained in the second volume. The first volume of the set contains a description of the library (Moscow, 1806; lxxiii, 275 p.) and volume 3 describes animals and plants (Moscow, 1817; xl, 326 p.). Apparently in 1817, after volume 3 appeared, the complete work was again reissued in Moscow and Leipzig (by Fleischer).

Pavel Grigorievich Démidoff. (BORN: 1738; DIED: 1821) *Russian naturalist, aristocrat & traveller.* Démidoff founded the botanical gardens of Moscow. His uncle, Akinfi Nikitich Démidoff [?-c1740] established the family's extensive gold, silver and copper mines. From this beginning Pavel inherited a collection of mineralized examples, to which he added other examples as well as a large library, and botanical and zoological examples. The whole collection was then donated to the University of Moscow where the remains are today located.

[FRENCH TITLE READS:]

Onomasticon | Du Système D'Oryctognosie | servant de base à l'arrangement des Minéraux du Muséum | De L'Université Impériale De Moscou. | par le Professeur | Gotthelf Fischer. | Directeur du Muséum. | [wavy rule] | Moscou. 1811 | de l'Imprimerie de l'Université Impériale.

4°: xx, 178 p.

RARE. The text is printed in both Russian and French. This is a textbook of Oryctognosie, or physical mineralogy, which provides accounts of the physical properties of minerals. It includes descriptions of various minerals, especially those found in Russia. It also provides a good reference to mineralogical nomenclature, especially between the French and Russian languages.

8°: π^8 1-28⁸ 294; 235^l.; [i]-xiv, [1]-456 p. PAGE SIZE: 205 x 120 mm.

CONTENTS: [i-ii], Title page, verso "Напечатано по опредѣленію Московскаго ..."; [iii], Dedication.; [iv], Blank.; [v]-[viii], Text of dedication.; [ix]-xiv, "Оглавленіе | Первой Уасми | Ориктогнозіи."; [1], Sectional title page.; [2], Blank.; [3]-456, Text, with last line reading: "Конецъ Первой Части."

EXTREMELY RARE. This is a thorough examination of oryctognosie section of mineralogy that Fischer wrote as an advanced textbook. At Moscow University in first quarter of the nineteenth century, formal descriptive mineralogy was cultivated. Fischer led the charge, teaching the course in mineralogy, and preparing in 1818 a textbook, the Ориктогнозія, that bears all the features typical of a descriptive mineralogy. He follows Werner in his discussion of the characteristics, and divides the minerals into stones, salts, combustible substances, and metals. These classes are then broken down into families, which consist of several mineral forms. The account of the minerals given by Fischer are

so arduous and difficult that it is virtually impossible to determine the species described. A citation to a second volume published in 1820 has been seen, but no physical copy has been discovered to describe.

Fletcher, 31 March 1891.; [1]-112, Text.

VERY SCARCE. This tract originally appeared in the *Mineralogical Magazine*. The text covers theories of the speed of light transmitted through crystals. It consists of the following five chapters: (1) Recent change of view as to the properties to be assigned to an elastic luminiferous ether. (2) Evolution of the optical indicatrix. (3) Naturalness of the method. (4) Deduction of the optical characters corresponding to an ellipsoidal indicatrix. (5) Various optical relations which are independent of the physical character of the periodic change.

ALBERT EDWARD FOOTE

FOOTE, Albert Edward. (BORN: Hamilton, New York, U.S.A., 6 February 1846; DIED: Atlanta, Georgia, U.S.A., 10 November 1895) *American chemist, mineral collector & dealer.*

Father of the mineral dealer and businessman, WARREN MATHEWS FOOTE. A.E. Foote was professor of chemistry at Iowa Agricultural College. However, in the mid-1860's, he began collecting mineral specimens from the mines of Michigan, causing Foote to establish a mineral dealing business in Philadelphia. Eventually, the name of Foote became famous for his large inventory of worldwide minerals, which were labeled and sold or traded to mineralogists at all levels.

NATURALIST'S AGENCY CATALOGUE, 1876

1694. — English, 1876 [First edition].

The Naturalist's Agency | Catalogue. | [rule] | Part First: | Minerals. | [rule] | A.E. Foote, M.D. | Professor Of Chemistry And Mineralogy. | [...3 lines of titles and memberships...] | [rule] | Boxes Sent On Approval To Any Part Of The World By Express Or Mail. | [rule] | 3725 Lancaster Avenue, Philadelphia, Pa. | [ornate rule] | The Collection Exhibited By A.E. Foote Received The Highest Award At The Exposition Of 1876. | The Only Award And Medal For "Collections Of Minerals" Given To An American. | [ornate rule] | Philadelphia: | Grant, Faires & Rodgers, Printers, 52 & 54 North Sixth St. | 1876.

8°: [i]-iv, [5]-48 p., frontispiece (showing various mineral specimens), illus., tables. PAGE SIZE: 240 x 152 mm.

CONTENTS: [Frontispiece].; [i-ii], Title page, verso copyright information.; iii-iv, "Of General Interest."; 5-48, Text.

RARE. All published? By the early-1870's Foote had formed an extensive personal mineral collection, part of which had been privately exhibited in New York in 1873. Probably based upon his reception there, he moved in 1875 to Philadelphia and prepared for the 1876 Centennial Exposition that took place in that city. Within the show he exhibited his best specimens, for which he won an award, while outside he sold his surplus specimens from a building rented just outside the Exposition grounds. This business was not exclusively minerals, but included shells, other natural history specimens, scientific instruments and second-hand scientific books. The catalogue described above describes the types of minerals Foote had for sale during this period. No trace has been found of other catalogue parts that might have been published.

8°: [1]-97, [1], [44] p. There are also blank pages in the book, probably to make notes. PAGE SIZE: 152 x 232 mm.

CONTENTS: [1], Title page.; [2], "Index."; [3]-[97], Text beginning "Of General Interest."; [1 pg], Map showing directions to the shop.; [2 pgs], Blank.; 44 pages of tables listing mineral species and their properties that are printed on one side of the page and interspersed with blank pages so the reader might add notes.

RARE. The catalog text proper consists of 98 pages, which is followed by another 44 page section that is a price list of species and the leading varieties of cabinet specimens. There are blank pages scattered throughout the book, probably to make notes, as well as several mineral illustrations.

FOOTE, Warren Mathews. (BORN: Ames, Storey County, Iowa, U.S.A., 27 December 1872; DIED: 1936) *American mineral dealer & businessman.*

Son of ALBERT EDWARD FOOTE. Warren Foote received his B.S. in chemistry from the University of Pennsylvania in 1894. He was a trustee of his father's estate from 1895 until 1916 when he became president and general manager of the Foote Mineral Company. Foote held membership in the American Academic Association for the Advancement of Science.

SCARCE. "In this new edition of our catalog of collections, the various lists have been corrected and revised to accord with the latest and most practical educational requirements, and similarly, with the steady growth of our large stock."—*Note*.

The catalog covers all manner of items needed by the mineral collector. It is divided into two major sections. The first covers display cases, standard collections ranging from elementary to advanced, precious stones, geological specimens, crystallography and laboratory supplies. The second, lists various mineral species and sizes available on an individual basis, including rare element minerals, fine cabinet specimens and meteorites.

FORSIUS (Helsingforsius)

Philadelphia, Pa., U.S.A. | Established 1876 By Dr. A.E. Foote | — 1909 —

8°: [1]-319, [1] p., 9 plates, illus., diagrs. PAGE SIZE: 232 x 150 mm.

CONTENTS: [1], Blank.; [2], "Quality | is assured | as we | permit | return of | specimens | at our | expense."; [3], Title page.; [4], "Contents."; [5]-319, Text.; [1 pg], "Index."

SCARCE. The last edition of a catalog describing all sorts of mineral specimens and related items available from this famous firm at the beginning of the century. The text is divided into eight sections. Part I is "Introductory" describing terms, quality, labels, sizes of specimens and drawer cabinets. Part II covers "Advanced Systematic Collections," being a concise description of Dana's *System of Mineralogy* (6th ed., New York, 1892). Part III is an "Index to Complete Type Collections." Part IV describes "Elementary Systematic Collections." Part V covers "Economic Mineralogy, Industrial Minerals and Ores." Part VI is devoted to "Crystallography and Loose Crystals for Measurement and Study." Part VII lists collections used in "Physical Mineralogy," such as hardness, structure, color and the effect of Radium. Part VIII covers "Chemical Mineralogy."

FORSIUS (Helsingforsius), Sigfrid Aronius. (BORN: Helsingfors, Finland, c1550; DIED: Stockholm, Sweden, Before 24 June 1624) *Finnish cleric, astronomer, naturalist & writer.*

It is recorded that Forsius had a wide ranging knowledge of scientific subjects, especially astronomy. In April, 1595 he was among the first to enter the newly established University at Uppsala, but within a year he had entered the army. By 1605, he traveled to Germany to further his education. He returned to Uppsala in 1608 to accept an astronomical professorship. But within a few years he accepted a position at a local church. Forsius was a prolific and wide ranging writer, authoring numerous almanacs and scientific works.

RARE. The manuscript from which this book was printed was originally written in 1613, and the work itself appeared a few decades after Forsius' death. In all of his writings Forsius was devoted to the theories of Paracelsus. The *Minerographia* is an expansion of a chapter and other material that made its first appearance in the author's *Physica* (Stockholm, 1611), which was Forsius' description of creation. In this book he comprehensively explains his theories about minerals, rocks and stones, with particular reference to their use in medicine. He presents a classification of minerals that follows in its essentials the system first proposed by ANDREA CESALPINO and divides the subject into Terræ, Mineralia, Metalla, Mineralia a metallis nata, and Lapides.

JOHANN REINHOLD FORSTER

FORSTER, Johann Reinhold. (BORN: Dirschau, Germany, 22 October 1729; DIED: Halle/Saale, Germany, 9 December 1798) *German naturalist of Scottish heritage.*

Father of the renowned naturalist Johann Georg Adam Forster [1754-1794], Johann Reinhold was a man of great scientific attainments, but an intractable temper. Commissioned by empress Catherine to survey the Russian colonies of Saratov province, Forster quarreled with the government and left with his family for England. There he obtained a position as instructor of natural history and modern languages at the nonconformist academy at Warrington. His temper soon compelled him to resign this appointment, and was forced for several years to earn a living publishing translations. An invitation to accompany Captain Cook on his third voyage around the world was accepted on the condition that his son, Johann Georg Adam be his assistant. The account of these travels was published by the son as *A Voyage round the World* (London, 1777; German, Berlin, 1778-80), which is considered the "first example of the glowing yet faithful description of natural phenomena which has since made a knowledge of them the common property of the educated world." [*Encyc. Brit.*] After returning to England, Johann Reinhold landed in debtor's prison, but was released after receiving a professorship at the University of Halle, where he remained the rest of his life.

8°: π⁴ B¹ A²³ C-M² N-S⁴; 52ℓ.; [3], [1], [1]-3, [1],

AN INTRODUCTION TO MINERALOGY, 1768

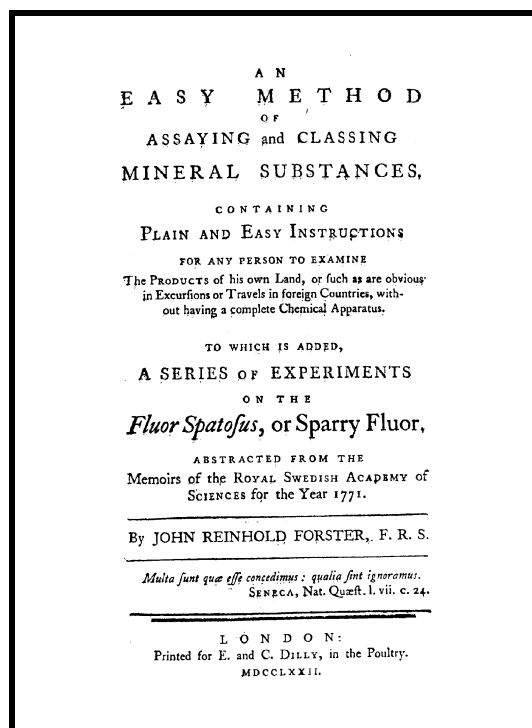

[1]-96 p. PAGE SIZE: 205 x 122 mm.

CONTENTS: [2 pgs], Title page, verso blank.; [1 pg], Dedication to the President and Vice President of the Warrington Academy, signed John Reinhold Forster.; [1 pg], Blank.; [1]-3, "Advertisement."—dated 1 March 1768.; [1 pg], Blank.; [1]-2, "Introduction."; 3-69, Text.; [70]-85, "Halotechnia: | or, | Tables on the Affinities of Salts: | Translated from the Latin of Dr. John Gottlob Lehmann."; [86]-93, "A Table | of the | Specific Gravities | of | Mineral Bodies, collected from Various Authors."; [94]-96, "A View | of the | Mineral Bodies | considered as | Conductors of Electricity, | taken from | Dr. Joseph Priestley's History of Electricity."

RARE. In the Advertisement, Forster describes his disappointment at not finding a suitable textbook in English to teach mineralogy. He recounts problems with the previous publications of Webster, Hill, Woodward, and Da Costa, and continues, "I found myself under the necessity of drawing up a short sketch of my own, adapted in the best manner I could imagine to the use of my class." Forster then describes how Lehmann presented him with a copy of his "Tables" when Forster visited St. Petersburg several years before. This book, meant to be the first volume of a general natural history (never completed), attempts to classify minerals on a purely chemical basis. It also discusses the generation of mineral bodies, including theories on the general structure of the earth. The relationship between various salts is described in a series of tables translated from Johann Gottlob Lehmann's *Kurzer Entwurf einer Mineralogie* (2nd ed., Berlin, 1760). Other tables show the specific gravities of various minerals. The volume

closes with a consideration of the electric conductivity of minerals based on Joseph Priestley's *History of Electricity* (1st ed., London, 1762).

AN EASY METHOD OF ASSAYING, 1772

1708. — English, 1772.

An | Easy Method | of | Assaying and Classing | Mineral Substances, | containing Plain and Easy Instructions | for any person to examine | The Products of his own Land, or such as are obvious | in Excursions or Travels in foreign Countries, with- | out having a complete Chemical Apparatus, | to which is added, | A Series of Experiments | on the | Fluor Spatosus, or Sparry Fluor. | Abstracted from the | Memoirs of the Royal Swedish Academy of | Sciences for the Year 1771. | [rule] | By John Reinhold Forster, F.R.S. | [rule] | Muta sunt quae esse concedimus; qualia sint ignoramus. | Seneca, Nat. Quaest. l. vii. c. 24. | [rule] | [rule] | London: | Printed for E. and C. Dilly, in the Poultry. | MDCCLXXII.

8°: π¹ B-C⁸ D⁶; 23ℓ.; [2], [1]-44 p. PAGE SIZE: 205 x 122 mm.

CONTENTS: [2 pgs], Title page, verso blank.; [1]-44, Text.

VERY SCARCE. The book begins with an account of the apparatus and precautions necessary for successful chemical analysis of minerals. This is followed by analytical descriptions of minerals classified under the headings of Earthy and Stony, Saline, Inflammable and Metallic. At this point, with its own title page, is the section concerning Sparry Fluor, today known as the mineral Fluorite. Originally authored by the Swedish chemist Carl William Scheele [1742-1786] and published in the *Memoirs* of the Royal Swedish Academy for 1771, this paper describes a series of interesting chemical investigations performed on samples of Sparry Fluor. These experiments include its combination with alkali and saline media, and the creation of hydrofluoric acid upon its reaction with hydrochloric acid.

8°: [I]-LXX p., [1 (blank)] f., 4 fold-out plates.

VERY SCARCE. The title of this work includes the unusual and rare word "orittografica," from the Greek oryctographia, literally "writing about digging," and refers to a combined interest in geology and paleontology. It is, in fact, an essay on the natural history of the volcanic valley of Ronca near Verona, including a discussion of the geology and fossils found in the valley. It is printed with some very fine etchings on fold-out plates. The first plate shows fossil sea-shells, the remainder showing dramatic formations of volcanic rock and the natural scenery around them.

2 vols. 8°. viii, 180, xlvii, [1]; [2], [iii]-viii, 204 pp. With 2 folding maps and 13 engraved plates (all folding). 4to., 254 x 185 mm

VERY SCARCE. Bound with: Antal Verancsics *Iter Buda Hadrianopolim anno MDLIII exaratum ab Antonio Verantio ... nunc primum e Verantiano carthophylacio in lucem editum* at end of volume one, with separate title page and pagination.

Fortis, an Augustinian friar, physician, naturalist, poet, journalist (and finally librarian of the Bologna library) resided in Croatia from 1771 to 1774; his letters, describing the country and its people, to various luminaries were collected together and published in the present volume. Included are his observations of Cherso and Osero, and the account of the voyage of Antonio Veranzio from Budapest to Constantinople in 1553, edited by Fortis. There are numerous details of the Morlacchi, or Vlassi as they called themselves. In his account Fortis outlined many of the divisions and tensions: the Vlassi despised the people of the coastal towns, who heartily detested them in return. To Fortis the Morlacchi represented a key to the ethnographic identity of Eastern Europe, since they could be identified by their language as Slavs. The accidental discovery of coins, walls and a necropolis at Tupeci made Fortis famous; the naturalist came to the conclusion that the locality could have been the site of the Late Antiquity Laurentum described by Procopius (500? - 565? AD), a Byzantine historian. The engravings depict landscape views, native costumes, archeological ruins, fossils, mineral formations, Fortis's Viaggio in Dalmaziawas translated

into English and French, both editions published in 1778. The above work was quoted by Montague Summers in *The Vampire: His Kith and Kin* (reprinted 1960): "When a man dies suspected of becoming a Vampire or Vulkodlak, as they call it, they cut his hams, and prick his whole body with pins, pretending that, after this operation, he cannot walk about." Another method found to incapacitate the body of an individual destined for vampirism is to break the deceased's spine. Mustard seeds were often placed in the coffin in order to keep the vampire busy counting them" (pp. 204-210). The discrepancy between the number of plates called for on the title-page and the number found in other perfect copies may be accounted for by several plates showing more than one subject.

FOUQUÉ, Ferdinand André. (BORN: Mortain, France, 21 June 1828; DIED: Paris, France, 7 March 1904) *French geologist & mineralogist.*

Fouqué made an extended voyage to Italy in 1860, and he also witnessed the eruption of Mt. Etna in 1868. Fouqué was appointed professor of inorganic substances at the College of France in 1877. Elected a member of the French Academy of Science in 1881, Fouqué became its president in 1901. His contributions include the introduction of the microscope for petrographic study to France, pioneering studies in the formation and composition of volcanic products, as well as many volcanic studies and the artificial production of rocks and minerals.

VERY SCARCE. Co-authored by Auguste Michel-Lévy. First edition of this book on the artifical synthesis of minerals and rocks. A list of references on pages 411-423 gives 135 authors with an indication of their reseaches. The text contains historical references and citations to the bibliography. A catalog of the artificial minerals held in the collection of the Collège de France is given on pages 397-404.

Auguste Michel-Lévy. (BORN: Paris, France, 17 August 1844; DIED: Paris, France, 24 September 1911) *French petrologist & mineralogist.* Michel-Lévy was a brilliant student, and is today called one of the pioneers of microscopic petrology. His interest turned to geology, and in 1862 he matriculated at the Polytechnic School, then entered the School of Mines, from which he graduated at the head of his class in 1867. From 1870 he made his career with the government Geological.

HAND-BOOK OF MINERALOGY, 1886

1730. — English, 1886 [First edition].

Hand-Book | Of | Mineralogy. | Determination, Description | And Classification | Of | Minerals Found In The United States. | [rule] | By J.C. Foye,

A.M., Ph.D., | [...2 lines of titles...] | [ornament] |
New York: | D. Van Nostrand, | 23 Murray and
27 Warren Street. | 1886.

8°: 180 p. Published as: *Van Nostrands Science Series*, no. 86.

RARE. A part of the material of this Work was prepared by the author and published under the title of "Mineral Tables." The second edition of the "Tables" being exhausted, advantage is taken of the opportunity to revise, enlarge rewrite, make additions and corrections, and bring the work out in the present more convenient form.

It has been the intention of the author to furnish a work by the aid of which minerals found in this country may easily be determined, to give concisely their prominent and distinguishing characteristics, and to present the classifications usually used in arranging cabinets. The tables for determining minerals are those constructed by the author and published in the work referred to above. Experience in using them in the classroom for the past eleven years has led to a slight modification of their original form.—*Preface*.

FRANKENHEIM

FRANKENHEIM, Moritz Ludwig. (BORN: Braunschweig, Germany, 29 June 1801; DIED: Dresden, Germany, 14 January 1869) *German physicist & crystallographer.*

Frankenheim began his teaching career when he was appointed associate professor at the University of Breslau [now Wrocław, Poland??] in 1827. From 1850 to 1866 he was professor of physics and director of the physics cabinet at that same institution. Frankenheim was a pioneer crystallographer who was the first to show in 1826 that spatial lattices were not only geometrically possible but were confined to 32 configurations, thus anticipating Auguste Bravais [q.v.] who is normally credited with the discovery. He also opposed J.N. von Fuch's [q.v.] theory of amorphous with one of aggregates of invisible crystals (important in the theory of colloids).

VERY SCARCE. A pioneering study in material
science. This work concerns the cohaesion of substances
and therefore includes a great deal of information on
the hardness of minerals as it relates to the crystal
structure. Also contained throughout the text are
bibliographical references. "Frankenheim's importance
lies especially in the field of crystallography. In his
work *Die Lehre von der Cohäsion* he was the first to
examine whether or not the geometrically possible types
of cristal lattices agree in their symmetry relations with
those actually observed in crystals" (DSB).

CONTENTS: [1-2], Title page, verso blank.; [3]-191,
Text.; [1 pg], "Zusätze und Verbesserungen."

VERY SCARCE. The introduction covers various
details about the physical properties of minerals, such
as specific gravity, hardness and crystallography. This
work is based partly on Mohs *Handbuch der Mineralogie*
(??, 18??). After the introduction, the characteristics of
crystals are discussed followed by a detailed discussion
of the six crystal systems, I. Tessular, II. Tetragonale,
III. Hexagonale, IV. Isoclinic, V. Monoclinic and VI.
Triclinic. The impact of isomorphism and diamorphism
to crystal structure in minerals is then described. A
section giving the chemical formulas of the minerals
mentioned and a comprehensive index to the names of
minerals mentioned closes the work.

FRATTA ET MONTALBANO, Marco Antonio Della. (BORN: 1635; DIED: 1695) *Italian aristocrat.*

MONTALBANI (the marquis Marc-Marc-Antoine),
wire of the precedent, had been born in 1630. It was pursued
the study of mineralogy particularly, and traversed as a
naturalist the countries of the north of Europe. The king
of Poland Jean-Casimir accomodated it with kindness at
his court, and decorated it with the title of marquis. Marc
returned to Italy, rich person of much of new knowledge; and
after having exploited the coasts of the Adriatic, it returned
to Bologna to lay out its materials and to put in order the
collections which it had formed. It died there in 1695, at
the 65 years age. There is of him 1 *Catascopia minerale*,
overo esplanazione E modo di far saggio of ogni will minira
metallica, Bologna, 167 6, in-4; 20 *Pratica minerale*, ibid.,
1678, in-4; 30 *acque Belazione dell' minerale LED regno of*
Ungaria, Venice, 1687, in-4. Orlandi still allots to him: *Di*
Ferdinando quoted.

MONTALBANI (le marquis Marc-Antoine), fils du
précédent, était né en 1630. Il s'attacha particulièrement
à l'étude de la minéralogie, et parcourut en naturaliste
les pays du nord de l'Europe. Le roi de Pologne Jean-
Casimir l'accueillit avec bonté à sa cour, et le décora du
titre de marquis. Marc rentra en Italie, riche de beaucoup
de connaissances nouvelles; et après avoir exploité les côtes
de l'Adriatique, il revint à Bologne disposer ses matériaux
et mettre en ordre les collections qu'il avait formées. Il y
mourut en 1695, à l'âge de 65 ans. On a de lui 1 *Catascopia*
minerale, overo esplanazione e modo di far saggio d'ogni
minira metallica, Bologne, 167 6, in-4; 20 Pratica minerale,
ibid., 1678, in-4; 30 Belazione dell' acque minerale del regno
d'Ungaria, Venise, 1687, in-4. Orlandi lui attribue encore :
La cita di Ferdinando.

4°: \pm^6 A-Z⁴ 2A-2E⁴; 117ℓ.; [10], 183, [1] p.; [1], 39 p., illus., 28 full page plates. Added engraved title page, title vignette, ornamental initials. PAGE SIZE: 220 x 160 mm.

RARE. A handsomely illustrated textbook on mining and metallurgical operations, which contains much practical information. Adams describes it has "one of the most important of the early books on mining." It is particularly strong in describing the construction and operation of smelting furnaces. Also included are observations about various minerals and metals. The author supports Agricola's views in that metals and ores did not spring spontaneously into being at the moment the world was created. The unsigned plates picture a wide variety of furnaces and related technologies.

Facsimile reprint, 1985: A modern edition with an introduction was published in 1985 as: *Pratica Minerale ... Marco Antonio Della Fratta et Montalbano, a cura di Marco Cima*. Firenze, All'insegna del giglio, [1985] (xliii, 2, 183, [6] p.).

KATALOG DER BIBLIOTHEK, 1879

Katalog | Der | Bibliothek | Der | Königlich
Sächsischen Bergakademie | Freiberg. | I. Theil.
Alphabetischer Katalog. | [ornate rule] | Freiberg. |
Druck Von Ernst Mauckisch. | 1879.

8°: [6], [1]-766, [3] p. PAGE SIZE: 260 x 168 mm.
uncut.

CONTENTS: [2 pgs], Title page, verso blank.; [2 pgs],
"Vorwort.;" [2 pgs], "Erläuternde Bemerkungen."—signed
C.G. Kreischer, June, 1879.; [1]-740, Text.; [741]-765,
"Nachtrag.;" [1 pg], "Berichtigungen.;" [1 pg], Blank.;
[1 pg], "Druck von E. Mauckisch in Freiberg."

RARE. First printed catalogue of the library of
the famous Bergakademie in Freiberg, Germany. This
volume lists 17,836 books by author, with title, place
and date of publication. Although three supplements
were published, the projected subject classification that
would be a companion to this original volume was never
published.

This Bergakademie's library is one of the greatest
mineralogical and geological collections yet assembled.
Founded in 1766 with the Bergakademie it had 1875
volumes by 1819 when it was fortunate to acquire the
3306 works that composed the personal library of its
most famous teacher, Abraham Gottlob Werner. The
library continued to be enlarged through donations and
purchases and still exists in Freiberg, Germany. Three
supplements were published between 1893 and 1928.
These are listed below.

Supplement I, 1893: Nachtrag I | zum | Alphabetischen
| Katalog | Der Bibliothek | Der | Königlich Sächsischen
Bergakademie | Freiberg. | [short rule] | Zuwachs Von
Ende Des Jahrs 1879 Bis Ende 1892. | [ornate rule]
| Freiberg. | | Buchdruckerei und Verlagsanstalt Ernst
Mauckisch. | 1893. 8°: [2], [1]-159, [1] p.

Supplement II, 1907: Nachtrag II | zum |
Alphabetischen | Katalog | Der Bibliothek | Der |
Königlich Sächsischen Bergakademie | Freiberg. | [short
rule] | Zuwachs Von Ende Des Jahrs 1892 Bis Ende 1905.
| [ornate rule] | Freiberg i. Sa. | In Kommission bei Craz
& Gerlach (Joh. Stettner). | 1907. 8°: [2], [1]-144 p.

Supplement III, 1928: Nachtrag III | zum |
Alphabetischen | Katalog | Der Bibliothek | Der Bücherei
| Der | Bergakademie Freiberg. | [short rule] | Zuwachs

Von Anfang 1906 Bis Ende 1927. | Druck Von Ernst
Mauckisch | Freiberg I. Sa. 1928. 8°: [4], [1]-226 p.

FREIESLEBEN

FREIESLEBEN, Johann Carl. (BORN: Freiberg,
Germany, 14 June 1774; DIED: Nieder-Auerbach,
Voigtland??, 20 March 1846) *German mineralogist &
geologist.*

Freiesleben studied under A.G. WERNER at the
Bergakademie in Freiberg. In 1799, he was awarded the
title of Bergmeister, and in 1800 he was appointed advisor
to the mining council and director of mining activities in
Eisleben. In 1838 he became Chief Mining Advisor for all
of Saxony, a post he held until his retirement in 1842.

Mineralogische Bemerkungen über das Schillernde
Fossil, von der Baste bey Harzburg insbesondere
mit Hinsicht auf dessen geognostisches Vorkom-
men. Im Nahmen der Linneischen Societät zu
Leipzig ... Leipzig, zu finden bey Wagner und Co.,
1794.

8°: A-B⁸ C³; 22ℓ.; [2], 38, [4] p.

RARE. Freiesleben, a member of an old Freiberg
mining family, was one of the most gifted and most
learned students of Werner and a close friend of von
Buch and Humboldt. The author later became chief
administrator of the mines in the Kingdom of Saxony.

"Through his exact and reliable descriptions of the
Permian and Triassic sedimentary formations in Saxony
and Thuringia he pushed beyond Werner to a greater
knowledge of the stratigraphic relationships of these
periods in central Germany and helped to create the
basis for stratigraphic comparisons with neighboring
regions. His painstaking and accurate data on mining

FREIESLEBEN

in Saxony and on the occurrence of minerals there are still valuable for historical purposes." (DSB)

RARE, especially in complete sets. Each volume has its own special title page, as follows: Volumes 1–4. "Geognostischer Beyträge zur Kenntniß des Kupferschiefergebirges mit besonderer Hinsicht auf einen Theil der Grafschaft Mannsfeld und Thüringens." Volumes 5–6. "Beyträge zur mineralogischen Kenntniß von Sachsen."

The first volumes provide a geological description of the great copper deposits (known as the Kupferschiefergebirges) in Germany. Details are given of the locations, formations, ore types, history, etc. of the region. The last two volumes of this series, *Beyträge zur mineralogischen Kenntniß von Sachsen*, describe the mineralogy of the region of Saxony in Germany. Freiesleben first describes the geological lay of the land, and the type of rocks found throughout. He then describes iron and tin mining, and the various mineral species found. Basalt is then described. The work concludes with Freiesleben's descriptive mineralogy of all species known to occur in the Saxon regions.

VERY SCARCE. The first appearance of this bibliography was in the *Bermännischen Journal* for 1816. This is a separate, expanded edition, bringing the bibliographic coverage up to 1820. It is a classified catalog biased to German literature with the first part covering writings in mineralogy, mining and metallurgy. Under this heading are listed bibliographies, dictionaries, works on nomenclature, periodicals, specialized writings in mineralogical chemistry and metallurgy, mineral analysis, mineral economics, and topographical works. The second portion covers textbooks of mineralogy, oryctognosy, classificatory works, petrology, and geognosy. The third section lists works on mining and mine procedures.

FRENZEL

FRENZEL, Friedrich August. (BORN: Freiberg, Germany, 24 May 1842; DIED: Freiberg, Germany, 27 August 1902) *German mineralogist.*

Frenzel won a scholarship to the Freiberg Bergakademie. Early on, he attracted the attention of A. BREITHAUPT, who asked him to help arrange the museum collections and determine their species. Under his mentor's direction, Frenzel soon was an expert mineralogist. However, his father died, and he had to contribute to his mother's support. He worked as a miner while completing his course work at Freiberg. After graduation, he accepted a position in the smelting laboratory of the town. He applied himself to the position, and he may have been the first researcher to isolate the element "Germanium," to which priority is given to G.G. WINKLER of Freiberg.

CONTENTS: [2 pgs], Title page, verso blank.; [i]-iv, "Vorwort"—signed August Frenzel, 2 September 1873.; [v]-vi, "Benutzte Werke."; [1]-352, Text.; [353]-358, "Nachtrag."; [359]-371, "Orts-Register."; [372]-380, "Sach-Register."

VERY SCARCE. *Mineralogisches Lexicon für das Königreich Sachsen* contains descriptions of 723 mineral species found in the region of Saxony in Germany. It gives information of their physical properties and chemical composition as well as the regional localities. This handbook became very popular among mineralogists and brought widespread attention to the author. The introduction gives a list of useful references in mineralogy and the work concludes with locality and subject indexes.

FRIEDEL

FRIEDEL, Charles. (BORN: Strausbourg, France, 12 March 1832; DIED: Montauban, France, 20 April 1899) *French chemist & crystallographer.*

Father of GEORGES FRIEDEL, Charles Friedel studied at the Sorbonne in Paris. He qualified in both chemistry and mineralogy and in 1856 was made curator of the collection of minerals at the École des Mines. In 1871 he became an instructor at the École Normalé and from 1876 was a professor of mineralogy at the Sorbonne. Together with the U.S. chemist James Mason Crafts [1839-1917], he discovered the Friedel-Crafts reaction, which is useful in organic synthesis. Throughout his career, Friedel successfully combined his interests in chemistry and minerals, and authored important studies of pyroelectricity and of artificial synthesis of minerals.

FRIEDEL, Georges. (BORN: Mulhouse, France, 19 July 1865; DIED: Strasbourg, Alsace, France, 11 December 1933) *French crystallographer.*

Son of CHARLES FRIEDEL, Georges Friedel formulated basic laws concerning the external morphology and internal structure of crystals. He recognized, in 1892, that liquid crystals had three types of organization (mesophases). In 1893, he became professor at the École des Mines in Saint-Étienne. After World War I, he moved to the University of Strasbourg. Illness caused his premature retirement in 1930.

Berlin, | der Gottesgelartheit und Weltweisheit
Beflissenen. | [ornate rule] | Halle, Zu finden in der
Rengerischen Buchhandlung. 1741.

4°: [12], 119, [1] p. PAGE SIZE: 202 x 164 mm.

RARE. Complete descriptive catalog of the petrifications and other curious and rare stones and minerals, which were contained in the outstanding cabinet of Friedrich Hoffmann. Schröter considers the descriptions to be far too brief, incomplete and unreliable. At the conclusion of the catalog is a bibliography of the works referenced in the text. The *Mineralienkabinett* was acquired in 1777 by Johann Goldhagen and incorporated into his own natural history collections. Subsequently, in 1787, Goldhagen's collections were purchased by the University of Halle. The remains of it are held there today.

Friedrich Hoffmann. (BORN: Halle, Germany, 19 February 1660; DIED: Halle, Germany, 12 November 1742) *German physician.* Hoffmann was the son of Friedrich Hoffmann [1626-1675], a well-known municipal physician of Halle. In 1675, he lost both his parents and a sister within a few days. In his youth, he was educated at home, including instruction in anatomy and pharmacology. From 1678 to 1680, he studied medicine at the University of Jena, receiving his M.D. in 1681. Afterward, Hoffmann embarked on an extended tour of Belgium, Holland, and England, studying medical methods. In 1681, he accepted a position at the University of Jena, but soon left due to jealousy from the senior faculty. For the next decade he successfully practiced his craft in Minden and Halberstadt. In 1693, Hoffmann was named the first professor of medicine at the University of Halle and charged with organizing the medical school. Except for a couple of tenures as court physician in Berlin, he remained in Halle.

Johann Friedrich Gottlieb Goldhagen. (BORN: Nordhausen, Germany, 1742; DIED: Halle, Germany, 10 January 1788) *German physician & medical writer.* In 1769 Goldhagen was named professor extraordinary of philosophy and natural history at the University of Halle. In 1778 he was appointed professor of medicine and was given the title of city physician. During his lifetime he built an extensive natural science collection, which was among the most important in Europe. Included was a large component of mineralogical specimens, rocks and fossils. In 1787, his collections were purchased for 2,500 thaler by the University.

[in red:] Nebst 12 illuminirten Kupffern. | [in black,
rule] | deutlich vorgestellt | von | [in red:] Jodoc.
Leopold. Frisch, | [in black:] Ev. Pr. zu K. in S. |
[rule] | Sorau, bey Gottlob Hebold, Buchh. 1746.

4°: [16], 175, [1] p., 12 engraved plates (hand-colored; depictions of the world). Title printed in red and black. PAGE SIZE: 198 x 160 mm.

VERY SCARCE. This is a curious mixture of science and theology being a history of the physical world from creation to its presumed fiery end. Frisch discusses the geology and mineralogy of the Earth, the nature of light and the elements, and asks questions like "what among all things will pass or will melt?", "what kind of fire will it be?", etc. All is considered in light of the creation and the millennium, with the general theological overtones. Frisch references Bernhard Wagners' *Tractatus Theologicus de Fine Mundi* (Leipzig, 1699) throughout his text. The plates show the earth in different stages since its creation, and other physical phenomena including the refraction of the sunbeams.

VERY RARE. Basing his study on published
lapidaries but not manuscripts, this is a pioneering
study in the history of precious stones as they were
used in early medicine. It is an enlarged version of the
author's doctoral dissertation on the same topic. The
text describes how these minerals were used by people
in India, China, the Middle East from prehistoric times
through the Middle Ages. In addition, a systematic
description of each gemstones properties is given with
citations to the literature and to the diseases that the
individual stones would treat.

Text.; D1v, Blank.

VERY RARE. This catalog provides a listing of specimens contained in the Copenhagen physician Henrick Furiens [1614-1659] museum, which together with a valuable library were bequeathed to the University of Copenhagen. The text provides the names of the various specimens and includes shells, minerals, plants, etc. It was compiled by Thomas Fuien, the brother of Henrick after the later's death. Thomas had previously cataloged the library in *Catalogus Bibliothecæ Henrici Furien* (Hafniæ, 1660).

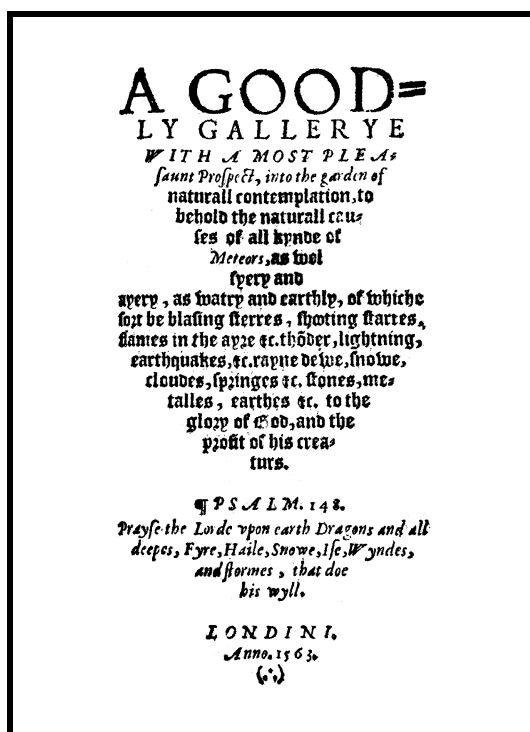

This text of this catalog originally appeared in Thomas Bartholin's *Domus Anatomica* (Hafniæ, 1662), p. 41.

FULKE, William. (BORN: London, England, 1538; DIED: London, England?, 1589) *English author.*

After studying at St Paul's School, Fulke attended St John's College, Cambridge and graduated in 1558. Finding he was not interested in his studies of law, he turned to mathematics, languages and theology. He authored many works in defense of Protestantism and in refuting the doctrines of the church of Rome. One particularly interesting non-theological works was a fantasy of an astronomical game in the manner of chess.

1783. 1654: [Contained within a box of single rules:] Meteors: | Or, | A plain Descripti- | on of all kind of Meteors, | as well as Fiery and Ayrie, as | Watery and Earthy: | Briefly | Manifesting the Causes of | all Blazing-Stars, Shooting-Stars, | Flames in the Aire, Thunder, | Lightning, Earthquakes, | Rain, Dew, Snow, Clouds, | Springs, Stones, and | Metals, | By W.F. Doctor in | Divinitie. | London, | Printed for William Leake at the

Crown | in Fleet-street, between the two Temple | Gates, 1654.

8°: a⁴ A-L⁸; 91ℓ.; [8], 1-174, [2] p. Title within rules, ornamental initials and headpieces.

RARE. Fulkes astronomical and meteorological treatise had been first published in 1563 under title *A goodly gallerye with a most pleasant prospect, into the garden of naturall contemplation, to behold the naturall causes of all kynde of meteors*. It is here enlarged by an anonymous second part "Observations on Dr. F. his booke of meteors. By F.W." p(p. [157]-174.) Fulke uses the term Meteor to advance a unified theory of the earth and heavens as a series of effusions generated by the earth itself, namely the fiery; the airy; the watery; and the earthy. Within this framework he considers the nature and causes of comets, shooting stars, the aurora and other aerial phenonmena; clouds and storms; the nature of the rainbow (advancing a theory of the rainbow as light refracted through water vapour); rivers, lakes, hot springs and the sea; and the types of metals and minerals found within the earth. The work was evidently composed while Fulke was at Cambridge, from whence he graduated in 1563, and predates his celebrated Puritan polemics by nearly a decade. This scarce edition of 1654 list quartos of *Othello* and *The Merchant of Venice* among the books advertised by William Leake.

FYODOROV, Evgraf Stepanovich. (BORN: Orenburg, Russian, 22 December 1853; DIED: Petrograd, Russia, 21 May 1919) *Russian crystallographer, geometrist, petrologist, mineralogist and geologist.*

Fyodorov studied mathematics indepentently while attending the St. Petersburg Military Engineering School, the Military Medical and Surgical Academy, and the Technological Institute. Upon graduating from the Mining Institute in 1883, Fyodorov took an appointment with the Mining Department where he was included in an expedition to explore the northern Urals. He extended a very strong influence on the developement of mineralogy and crystallography at the end of the nineteenth century. His clssification of symmetry groups of crystallized matter lead directly to the working out of a new nomenclature of systems and point group symmetries known as Fyodorov-Groth nomenclature. Fyodorov's goniometer modifications

FYODOROV (FEDEROV)

produced a revolution in the method of investigating minerals. Invented the universal stage (Fyodorov table) for petrographic microscopes that would locate the specimen at the center of two glass hemispheres (Fyodorov method).

8°: [1]-146 p.

VERY RARE. This is Fyodorov's classic work that provides the deduction of the possible 230 space groups that now serve as the mathematical basis of structural and crystallographic analysis. Early in his career, Fyodorov became interested in the relationship between symmetry and crystallography. Extending the previous work of BRAVAIS and SOHNCKE, Fyodorov focused his attention on the aggregate of point systems providing a complete derivation of real point systems and the derivation of all possible forms of crsytal structures with every group rigorously

SIMMETRIIA PRAVILNYKH SISTEM FIGUR, 1890

determined by an algebreic determination. *Symmetry of Real Systems of Configuration* outlines Fyodorov's methods that systematically developed the studies of symmetry as they pertain to natural crystals and shows conclusively that there are only 230 possible configures. Incredibly, the German crystallographer SCHOENFLIES almost simultanously derived the same configurations, although Fyodorov clearly had priority.

Separate preprints of this work were published in 1890 and presented by the author to his colleagues and friends in Russia and Europe. The work was then printed as "Simmetrija pravil'nykh sistem figur" in *Zapiski S. Petersburg Mineral. Obsc.*, 2nd series, 28 (1891), pp. 1-146.

Das krystallreich. Tabellen zur krystallochemischen analyse. Von E. von Fedorov, unter mitwirkung von D. Artemiev ... Th. Barker, B. Orelkin und W. Sokolov ... Petrograd, 1920.

[Text] 4°: [4], lxxiv, 1050 p. [Atlas] 4°: [4] p., 213 plates.

VERY SCARCE. This is a German translation of the enormous "Tsarstvo Kristallov" ("The Crystal Kingdom") that appeared in *Zapiski Rossiiskoi Akademii Nauk*, 36 (1920). It was the culmination of Fyodorov's forty years of research in crystallography. Fyodorov and his favorite students collected enormous quantities of data from the measurements of all possible crystals. This information was categorizeed and published a year after Fyodorov's death in this monumental work. From the geometry of the crystals, the author derives conclusions about their internal structure., an idea taken up by Harker, Donnay, and others in the following decades.

GABINETTO MINERALOGICO.

Gabinetto Mineralogico Dell Collegio Nazereno Descritto (2 vols., Roma, 1791-2).

See: Petrini, Giovanni Vincenzo.

GADD, Pehr Adrian. (BORN: Birkala Parish, Finland, 12 April 1727; DIED: Åbo, Sweden, 11 August 1797) *Swedish chemist & mineralogist.*

Gadd was educated at the University of Åbo, graduating with a philosophical degree. In 1750, he was appointed a docent in natural history. With the support of University and public funds, he undertook travels in 1753 to 1755 throughout Finland to study nature and economics. Upon his return Gadd was appointed professor of physics, economics and chemistry at the University of Åbo. In this capacity, he showed his skill as an operative chemist, knowledge which he passed on to his many students. Gadd was a member of the Kungliga Svenska Vetenskapademi (Royal Swedish Academy of Science), and other learned societies.

VERY SCARCE. Dissertation — Carl Nicolas Hellenius [1701-1768], respondent. The "Brakengeruch" of the sea and the resulting sea sickness that results from it, Gadd attributes to the salty exhalations of the sea, which are not however of alkaline nature. The suffocating vapor (Mephitis) he considers as vitrolis, and believes that it also gives an arsenical scent, if a small amount of arsenic is present. There follows descriptions of sulfur-like and petroleum-like vapors. These last, Gadd believes are responsible for fire, though he notices a sulfur smell from the combustion fumes of petroleum.

Carl Nicolas Hellenius. (BORN: 1701; DIED: 1768)

Swedish.

GADOLIN, Aksel' Vil'gel'movich. (BORN: Finland, 12 (24) June 1828; DIED: St. Petersburg, Russia, 15 (27) December 1892) *Russian scientist & artillery weapons expert.*

Gadolin graduated the Mikhail Artillery School in 1849 and remained there to teach. He developed techniques for building high velocity canons, which significantly increased the range a shell could be propelled. He is remembered in crystallography for deriving the 32 macrosymmetrical crystal groups, and devising a method for depicting these groups on a sphere that is still in use to the present. The St. Petersburg Academy of Sciences awarded him the Lomonosov prize for his crystallographic work, 1868.

DEDUCTION, 1868

1812. — Russian, 1868 [First edition].
Вывод | Всех | Кристаллографических Систем

| И Их Подразделении | Из Одного Общего Начала. | ...

4°: 156 p.

EXTREMELY RARE. This is the separate appearance of Gadolin's *Deduction of all Crystallographic Systems and their Subdivisions by Means of a Single General Principle* that showed there are only a limited number of possible crystallographic polyhedra possible. In 1830 CARL FRIEDRICH NAUMANN coordinated the crystallographic systems of Weiss and Mohs, but which to some degree ignored symmetry elements. In response Gadolin who was a Russian artillery professor and a talented amateur crystallographer became agitated over Naumann's lack of rational in developing his crystallographic descriptions. To better relate symmetry and crystallography Gadolin developed his own procedure for studying crystal symmetry.

Beginning with the empirical law of rational parameters Gadolin demonstrates in this work that it is possible to derive through deduction all the crystallographically possible polyhedra by studying how the elements of symmetry can be combined. In this way Gadolin shows that the resulting polyhedra can be divided into 32 classes varying by symmetry. He also states unequivocally and for the first time that two crystals should belong to the same crystal class if they have the same elements of symmetry. This is the foundation of modern classification into geometric crystal classes.

Like some other scientific works this revolutionary work was largely overlooked at the time of its publication. It was only in later years that Gadolin's crystal classes became generally accepted and led to many significant theories and practical studies. Even today and to the consternation of many student geologists the Gadolin classification is to be found worked out in many mineralogical textbooks.

Reprinted, 1954: Вывод всех Кристаллографических Систем и их Подразделении из Одного Общего Начала [Vyvod vseh Kristallograficheskikh Sistem i ikh Podrazdelenii iz Odного Obshchego Nachala. 1813. Translation, 1896: Abhandlung über die Herleitung aller krystallographischer Systeme, mit ihren Unterabtheilungen aus einem einzigen Prinzipie von Axel Gadolin. (Gelesen den 19. März 1867) von Axel Gadolin. (Gelesen den 19. März 1867) herausgegeben von P. Groth. Mit 26 Textfiguren und 3 Tafeln ... Leipzig, W. Engelmann, 1896.

8°: viii, 92 p., 3 plates, 26 text illus. Published as: *Ostwald's Klassiker der exakten Wissenschaften*, vol. 75.

SCARCE. Edited by PAUL GROTH, this is a German translation of Gadolin's famous crystallography. It is the first appearance in book form in a European language although it appeared after a French rendering that originally appeared in *Acta Societatis Scientiarum Fennicae, Helsingfors*, 9 (1871). This German edition was published as volume 75 of Ostwald's famous series of translations.

GADOLIN

GADOLIN, Johan. (BORN: Åbo near Helsingfors (Helsinki), Finland, 5 June 1760; DIED: Wirmo, Finland, 15 August 1852) *Finnish chemist.*

Son of astronomer and physicist Jacob Gadolin [1719-1802]. For a time, Johann was a student of BERGMAN at the University of Upsala. From 1786 to 1788, Johann traveled outland to complete his studies and broaden his knowledge. He became a docent at the University of Åbo in 1789, and following GADD's death, he was appointed professor of chemistry; a post he held until 1822. He specialized in the analysis of rare earth elements, and is credited with the discovery in 1794 of the element yttrium. Gadolin's mineral collection was destroyed in 1827 by fire when the Turku Academy burned down. Gadolin held membership in the Academy of Science in Stockholm. The mineral "Gadolinite" was named in his honor by M.H. Klaproth in 1802.

SCARCE. Gadolin was a man of practical and technical applications. He viewed minerals as natural

SYSTEMA FOSSILIVM, 1825

chemical products, and consequently investigated through chemistry the minerals and rocks of his country. At that time, very little was known of mineral paragenesis, but thanks to the publications of HAÜY and BERZELIUS a new foundation in mineral chemistry was being laid. In the *Systema Fossilium*, Gadolin creates a system of mineral classification based upon chemical principles. The introduction explains the reasons and application of Gadolin's theories, while the text is a systematic ordering of mineral species by their chemistry. The volume concludes with an index of mineral synonyms.

RARE. This is the earliest account of the varied volcanic ejecta found at Vesuvius. It is a descriptive catalog of 141 specimens contained in a mineralogical cabinet, and provides observations on the different minerals and rocks, and a method of classification based upon the degree of calcination of the specimen. Contained at the end is a valuable early bibliography of writings on Vesuvius.

The catalog gives details of the earliest mineralogical cabinet to describe the various ejecta of Mount Vesuvius and, together with GIOVANNI MARIA DELLA TORRE's *Storia e Fenomeni del Vesuvio* (Napoli, 1755), provides the first ever descriptions of the volcano's minerals and rocks. It concludes with a 14 page bibliography of early works describing the volcano. In the history of mineralogy, Vesuvius is by far the most important volcano, as it alone was accessible to scientists in the eighteenth and nineteenth centuries. Thus, it was not only the source of rare and exceptionally beautiful minerals, but also facilitated the development of theories on mineral genesis. Later it was to become the birthplace of theoretical and practical vulcanology, when the world's first observatory was set up on the mountain's slopes in 1845.

GALISSARD DE MARIGNAC

GALISSARD DE MARIGNAC, Jean-Charles. (BORN: 24 April 1817; DIED: 15 April 1894) *French mineralogist & chemist.*

Jean-Charles Galissard de Marignac from Geneva, was a pupil of Liebig. It was in Liebig's Giessen laboratory that de Marignac did his only researches on organic chemistry, on naphthalene and phthalic acid. He then changed to anorganic chemistry and commenced his career as professor of chemistry first at the Academy of Geneva, which was later to be made into the University.

1818. — French, 1855.

Recherches sur la formes crystallines de quelques composés chimiques. Genève, 1855.

8°:

VERY SCARCE. First edition. Concerns the forms of crystals grown in the laboratory. Rammelsberg in his 1857 supplement to his *Krystallographische Chemie* makes frequent reference to this work.

1819. — French, 1902 [Collected works].

Oeuvres complètes. Publiées hors série sous les auspices de la Société de Physique et Histoire Naturelle de Genève par E. Ador. Genève, Paris & Berlin, (1902).

2 vols. [VOL 1] 4°: 8, lvi, 701 p. [VOL 2] 4°: 4, 839 p. With a fine portrait and numerous plates and folding tables.

RARE. REWORK COMMENTARY. Edited by Emile Ador [1845-]. In 1878 Marignac was able to show that the rare earth known as erbia, obtained from gadolinite, could be decomposed into two oxides, one for which the name erbia was retained and a second which was called ytterbia. His most important work, however, consisted in the determination of the atomic weights of numerous elements, and in other subjects of inorganic chemistry. These two volumes

GATTERER

contain his numerous papers on inorganic chemistry and crystallography. In his most important, he showed that fluostannates and fluosilicates are isomorphous, thus establishing the formula of silica as SiO₂ and not SiO₃, and this produced a revolution in chemical mineralogy.

His 111 published papers were handsomely reprinted as *Oeuvres complètes* with portrait and a complete list of Marignacs atomic weights. When, in 1860, Stas dismissed Prout's law as an "illusion", Marignac cautioned that deviations from the law of definite proportions might sometimes occur — a possibility suggested by an erroneous view of the composition of acids which he then held. More speculatively, he suggested that Prout's law might be an "Ideal" law which was subject to perturbing influences such that the weights of the subatomic particles of the primordial matter did not add up to exactly the experimentally determined atomic weights. This daring speculation was revived in 1915 by W. D. Harkins and E. D. Wilson and from it the concept of the packing fraction was developed by F. W. Aston in 1920.

RARE. This five volume series is an early and important account of the Harz Mountains of Germany emphasizing the natural history of the region. Mining had occurred in the Harz since at least the 10th century and these volumes describe the mineral resources of the area including its copper, gold, silver and lead mines and the techniques for processing metals from their ores. Gatterer an instinctive bibliographer also provides extensive citations to other works regarding the Harz Mountains and mining in general. This work also contains much on the local animals and plants of the region. This appears to be a rare work especially in complete sets.

Contents: Vol 1: Berg- und Hüttenwesen allgemein. Vol 2: Flora, Fauna, Geologie, Klima der Region (with a Harz-Bibliography). Vol 3: Beiträge zur Geschichte des Harzes, das heißt von den unter- und oberharzischen Bergwerken. Vols 4-5: Beschreibung des Harzes.

[Vol 2] [2 pgs], Title page, verso blank.; [2 pgs], "Vorrede."—dated 30 July 1786.; [2 pgs], "Inhalt."; [1]-98, Text.

RARE. The first portion is a general bibliography of mineralogy, mining, minting, and salt containing some minor biographical information. This part originally appeared in 1785 but was very much expanded and published again in 1787, and this is the more common issue. In the meantime, the second part focusing on the Harz region of Germany and its mining bibliography was published in 1786. However, this work was eclipsed by Gatterer's *Allgemeines Repertorium* that is described in the next entry.

mineralogischen Literatur. I. Register, über die Namen der Schriftsteller.”; [33 pgs], “II. Register, über die abgehandelten Materien.”; [1 pg], “Druckfehler im zweyter Bande.”

VERY RARE. One of the great bibliographies of mineralogy and mining published in the eighteenth century. Particularly useful for its completeness, the bibliography's entries are broken into broad categories of historical works, bibliographies, deterministic mineralogy, crystallography, systems of classification, monographs on specific species, and topographical. Many of the entries contain references to contemporary reviews as well as Gatterer's succinct comments about the value of the listed title. Throughout the work liberal use is made of cross referencing, and at the end of volume two are extensive name and subject indexes.

GAUBERT, Paul Marie Benoit. (BORN: St. Bauzély, Aveyron, France, 24 February 1865; DIED: Paris, France, May 1948) *French mineralogist*.

Between 1883 and 1892, Gaubert was a student of Milne Edwards and ALFRED LACROIX, when he studied in Toulouse and Paris. From 1919 to 1920, he was professor of mineralogy at the École des Mines (School of Mines) in Paris. But Gaubert's principle career began in 1893 as préparateur assistant and director of the laboratory at the Muséum d'Histoire Naturelle in Paris. He remained with the Muséum until 1932. In 1909 and again in 1934, he was elected president of the French Mineralogical Society.

"Mine De Fer Spathique Blanche. Tiré du Cabinet de M. Sage." Planche VIII. "Mine d'Argent grise cristallisée."

EXTREMELY RARE, with only one copy known so far. This prospectus advertises the upcoming publication of d'Agoty's *Histoire Naturelle* and solicits subscribers for the project [see next entry]. Included are 8 engraved plates of minerals created by the Le Blon/d'Agoty color printing process, and finished by hand. In 1776, a royal permission was granted to d'Agoty for the publication of a major work illustrating in color the three kingdoms of natural history in realistic depictions. This prospectus provides a sample of the d'Agoty's vision. He writes in the preface that black and white representations can not show minerals

realistically, therefore his *Histoire Naturelle* will utilize printing in colors to convey nature authentically to the reader. Minerals will be the subject of the first portion, but will not go beyond 100 drawings, which should be adequate to show all features of this realm to subscribers. This prospectus is not listed in other bibliographies, and only one copy is currently known to exist.

HISTOIRE NATURELLE ... RÈGNE MINÉRAL, 1781.

1827. — French, 1781-[91?].

Histoire | Naturelle | Ou | Exposition Générale | De Toutes Ses Parties | Gravées Et Imprimees En Couleurs Naturelles; | Avec Des Notes Historiques. | Par M. Fabien Gautier D'Agoty, 5^e fils. | [double rule] | I.^{re} Partie, Règne Minéral. | [double rule] | [ornament] | A Paris, | De L'Imprimerie De Monsieur, | sous la direction de P. Fr. Didot jeune, quai des Augustins. | [rule] | M.DCC.LXXXI.

4°: [a]⁴ A-B⁴ C-G² L² I-K² 2L² M-N² 2J² 2K² 3L² 2M² 2N² O-Z²; 64ℓ.; [i]-vij, [1], [1]-119, [1] p., 61 plates (plate 20 usually appears twice, in colored and uncolored states). After the preliminaries, each plate is accompanied by one leaf (2 pages) of text. The *British Library Catalog* lists a copy containing an additional ten plates, but with no text.

CONTENTS: [i-ii], Title page, verso blank.; [iii]-vij, "Avant-Propos."; [1 pg], "Privilege Du Roi." &

"Approbation."—dated 2 January 1781.; [1]-119, Text.; [1 pg], Blank.

PLATES: Common elements between all plates are the double rule border surrounding the illustration and the descriptive text. This border is sectioned into two compartments. The larger top compartment is used to display the mineral illustration, while the lower one is used for a text in French that describes the plate's subject and the collection from which the specimen came. The first state of plates 1–30 are all signed in a fashion similar to "Dessiné Gravé et Imprimé en Couleur par Fab. Gautier d'Agoty. 5.^e Fils." These same plates in second state are not signed. Plates 31–40 are signed in a fashion similar to "Desfontaines del, et diree. Bonvallet Sculp." while plates 41–70 are signed "Desfontaines del et sculp." The seventy plate descriptions are as follows:

Planche I. Gres Cristallisé, De Fontainebleau; du Cabinet de M.^r de Romé de Lisle. Pl. II. Groupes de Cristaux De Mine De Fer Lenticulaire de L'Isle d'Elbe, de M.^r de Romé de Lisle. Pl. III. Galene Cubique Ou Mine De Plomb Sulfureuse, de M.^r de Romé de Lisle. Pl. IV. Galene Octaèdre Ou Mine De Plomb, Grise Et Sulfureuse, du Cabinet de M.^r l'Abbé Nolin. Pl. V. Granit De Basse-Bretagne; Du Cabinet de M.^r de Romé de Lisle. Pl. VI. Mine De Fer Spathique Cristallisée En Crêtes De Coq de Baigorri en Basse-Navarre du Cabinet de M.^r Sage. Pl. VII. Mine D'Argent Grise Cristallisée En Tétraèdres Gontre Partie de la Planche VII. du Cabinet de M.^r Sage. Pl. VIII. Groupe de Spath Calcaire l'Enticulaire. Tiré du Cabinet de M.^r de Romé de L'isle. Pl. IX. Groupes et Cristaux détachés de Spath-Calcaire pyramidal. Tiré du Cabinet de M.^r de Romé de L'isle.

Pl. X. Groupe de Mine de Fer Spathique Blanche Rhomboïdale, entremêlée de Marcasites dodécaèdres de Visilés en Dauphiné. Tire du Cabinet de M.^r Besnier de la Pontonnerie, Essayeur général des Monoyes de France. Pl. XI. Cristaux de Selenite en groupes et Solisaires. Tiré du Cabinet de M.^r de Romé de l'Isle. Pl. XII. Groupes détachés de Spath Vitreux Cubique. Tiré du Cabinet de M.^r de Romé de l'Isle. Pl. XIII. Groupes de Spath pesant ou Séléniteux rhomboïdal. Tiré du Cabinet de M.^r de Romé de l'Isle. Pl. XIV. Groupe de Cristaux de Blende octaèdres des mines de Hongrie. Tire de la Collection de M. Jacsb Forster. Pl. XV. Groupes de Cristaux de Blende qui présentent différentes modifications du tétraèdre. Tiré de la Collection de l'Auteur. Pl. XVI. Groupe de Cristaux de Mine de Plomb blanche d'Huelgoet près Poullaon en Basse Bretagne. Tiré du Cabinet de M.^r de Romé de l'Isle. Pl. XVII. Groupes et Cristaux détachés de mine de Plomb Blauche, Grise, Rouge, Verte, &c. Tiré du Cabinet de M.^r de Romé de l'Isle. Pl. XVIII. Schorl vert prismatique en saïscaux, entremêlé de Cristaux de Roche, des Alpes Dauphinoises. Tiré du Cabinet de M.^r de Romé de l'Isle. Pl. XIX. Groupes et Cristaux solitaires de Tourmaline d'Espagne du Tirol et de Ceylan. Tiré du Cabinet de M.^r de Romé de l'Isle.

Pl. XX. Mine Jaune de Cuivre Cristallisée et différens Groupes de Marcassites Cuivreuses. Tiré du Cabinet de M.^r de Romé de l'Isle. Pl. XXI. Roche de Cristal noir, entremêlée de Cristaux de Feld-Sparth blanc, de Bretagne. Tiré du Cabinet de M.^r Bertin, Ministre et Secrétaire d'Etat. Pl. XXII. Groupe de Cristaux de Soufre citrin, natif des environs de Cadix. Tiré du Cabinet de M.^r Sage. Pl. XXIII. Groupe de Spath pesant ou Séléniteux en tables des Mines du Hartz. Tiré du Cabinet de M.^r de Joubert, Trésorier Général des Etats de Languedoc. Pl. XXIV. Pyrite blanche Arsenicale et Mines de Cobalt grise et blanche. Tiré du Cabinet de M.^r de Romé de l'Isle. Pl. XXV. Groupe de Cristaux de Sélénite à Angle rentrant. Tiré du Cabinet de M.^r de Joubert. Pl. XXVI. Grenat Dodécaèdre et ses variétés, des Alpes du Tirol. Tiré du Cabinet de M.^r de Romé de l'Isle. Pl. XXVII. Spath Calcaire en prismes hexaèdres, tronqués net aux 2. bouts; du Hartz. Tiré de la Collection de M. Jacob Forster. Pl.

XXVIII. Différens Groupes de Cristaux de Mines d'Argent rouge et Nitreuse; Tirés des Cabinets de M.M.^s l'Abbé Nolin et de Romé de l'Isle. Pl. XXIX. Ludus Argilleux et jayet à veines calcaires en forme de Ludus; Tiré du Cabinet de M.^r de Romé de l'Isle.

Pl. XXX. Ludus quartzeux et Cellulaire, du C.^{té} de Durham en Angleterre. Tiré de la Collection de M.^r Jacob Forster. Pl. XXXI. Groupe de Spath Séléniteux en Tables. Tiré du Cabinet de M.^r de Joubert. Pl. XXXII. Groupes de Cristaux de Schols violet transparent Rhomboïdal, de la Balme d'Auris en Dauphiné. Tiré du Cabinet de M.^r Sage. Pl. XXXIII. Macles de Schort blanc hexagone et Rhomboïdal, sur un groupe de Cristaux de Roche verdâtre, de Barège dans les Pyrénées. Tiré du Cabinet de M.^r le Marquis de Cubieres. Pl. XXXIV. Groupe de Spath Calcaire Rhomboïdal, de même forme que le Grés Rhomboïdal, de Fontainebleau. Tiré du Cabinet de M.^r de Jobert. Pl. XXXV. Groupe de Cristaux de Mine de Fer Spéculaire, de l'Isle d'Elbe. Tiré du Cabinet de M.^r de Joubert. Pl. XXXVI. Groupes et Cristaux Solitaires de Feld-Spath rougeâtre de Baveno, près du Lac Majeur. Tirés de divers Cabinets. Pl. XXXVII. Mine d'Antimoine en longues Aiguilles divergentes qui traversent de part en part des Rhombes de Spath Séléniteux; de Felsobanya en Transilvanie. Tiré de la Collection de M.^r Jacob Forster. Pl. XXXVIII. Groupes d'Hyacinthes Ensumées, de la Somma au Vesuve. Tirés du Cabinet de M.^r de Cramayel. Pl. XXXIX. Groupe de Cristaux de quartz, d'un rouge de Cornaline, de Geyeren Saxe. Tiré du Cabinet de M.^r Gigos d'Orcy, Receveur Général des Finances.

Pl. XL. Quartz Cristallisé en roses ou en rayons, qui partent en divergeant de différens centres. Tiré du Cabinet de M.^r le Marquis de Cubieres. Pl. XLI. Groupe de Spath calcaire prismatique hexaèdre à pyramides trièdres obtuses, de Schneeberg en Saxe. Tiré du Cabinet de M.^r de Romé de l'Isle. Pl. XLII. Mine d'Antimoine grise Cristallisée, de Lubillac en Anvergne. Tiré du Cabinet de l'Ecole Royale de Minéralogie docimastique, de l'hôtel des Monnoies. Pl. XLIII. Spath Calcaire pyramidal hexaèdre à pyramides tronquées par trois plans trapézoïdaux, sur un groupe de Spath vitreux Cubique, du Derby Shire. Tiré du Cabinet de M.^r Gigot d'Orcy. Pl. XLIV. Mine de Fer grise cristallisée sur une Roche granitique de Framout dans les Vosges. Tiré du Cabinet de M.^r de Romé de l'Isle. Pl. XLV. Macles de Cristaux d'Etain noirs, entremêlées de Cristaux de Roche et de mica Cristallisé, de Zinnwalde en Bohême. Tiré de la Collection de M.^r Jacob Forster. Pl. XLV. Macles de Cristaux d'Etain noirs, entremêlées de Cristaux de Roche et de mica Cristallisé, de Zinnwalde en Bohême. Tiré de la Collection de M.^r Jacob Forster. Pl. XVI. Manganaise Cristallisée en aiguilles prismatiques et divergentes, de Schurde et d'Ilefeld en Thuringe. Tirés du Cabinet de M.^r de Romé de l'Isle, &c. Pl. XLVII. Malachite mammelonée et rubauee, de Sibère. 2^e. morccaux, Tirés de la belle Collection de M.^r Jacob Forster. Pl. XLVIII. Deux morceaux d'Hématite ou Mine de Fer en stalactites dont le supérieur est incrusté de Manganaise; du Comté de Sayn. Tirés de la belle Collection de M.^r Jacob Forster. Pl. XLIX. Pyrise en masse globuleuse et Cristallisée, totalement passée à l'état de Mine de Fer hépatique, d'Angleterre. Tiré de la Collection de M.^r Jacob Forster.

Pl. L. Mine de Cuivre vitreuse rouge cristallisée, mêlée de Cuivre natif, de fleurs de Cuivre soyeuses vertes &c. Tiré du Cabinet de M.^r Gigot d'Orcy. Pl. LI. Améthiste Gemme ou Basaltine de Saxe. Du Cabinet de M.^r Gigot d'Orcy. Pl. LII. Zéolite Cristallisée en dodécadre comprimée et en Cubes d'Islande. Du Cabinet de M.^r Gigos d'Orcy. Pl. LIII. Groupe de Pirites cuivreuses en octaèdres tronqué. Du Cabinet de M.^r Joubert. Pl. LIV. Groupe de Topases de Sehneckenstein en Saxe. Du Cabinet de M.^r Gigot d'Orcy. Pl. LV. Groupe d'hyacinthes blanches cruciformes d'Andreatberg an hartz.

Du Cabinet de M.^r Gigot d'Orcy. Pl. LVI. Mine de Plomb cornée en prismes, exaèdre et pyramides trièdre obtuses, des mines de la Croix en Lorraine. Du Cabinet de M.^r l'Abbé Nolin. Pl. LVII. Groupe d'Émeraude du Pérou. Du Cabinet de M.^r Gigot d'Orcy. Pl. LVIII. Manganèse en Stalactites de Eizenzeche près Nassau Siegen. De la Collection de M.^r Jacob Forster. Pl. LIX. Spats Calcaire à pyramides exaèdre obtuses de la porte de France à Grenoble, et du hartz. Du Cabinet de M.^r de Romé de l'Isle.

Pl. LX. Hematite colorée et chatoyante de Hongrie. Du Cabinet de M.^r Gigot d'Orcy. Pl. LXI. Cinabre Cristallisé, d'Isdria en Carinthie. Tiré du Cabinet de M.^r de la Bore. Pl. LXII. Spath en Barre; de Freyberg en Saxe. Tiré du Cabinet de M.^r Gigot d'Orcy. Pl. LXIII. Azur de Cuirvre Cristallisé, du Bannal de Temeswar. Tiré du Cabinet de M.^r Gigot d'Orcy. Pl. LXIV. Spath Calcaire Rhomboïdal, dont la base de réunion des Pyramides, est Tronquée en double Biseau. Tiré du Cabinet de M.^r Gavangeot. Pl. LXV. Spath vitreux en Cube violet Tronqué en Biseaux sur les bords, de Northumberland. Tiré de la Belle Collection de M.^r Forster. Pl. LXVI. Chorle vert, du Cap de Bonne Espérance. Tiré du Cabinet de M.^r Gigot d'Orcy. Pl. LXVII. Zéolite en Octaèdre surbaissé de Feroé. Tiré du Cabinet de M.^r Gigot d'Orcy. Pl. LXVIII. Spath pesant verticillé, Mica vert des Saxons, de Johann Géorgenstade. Tiré du Cabinet de M.^r Gigot d'Orcy. Pl. LXIX. Spath vitreux en Cubes à Angle Tronqué, et Mica de Zennwald, en Bohême. Tiré du Cabinet de M.^r de la Bove. Pl. LXX. Mine jaune de Cuirvre Cristallisée, du Comté de Sayn. Tiré du Cabinet de M.^r Gigot d'Orcy.

VERY RARE. This book is one of the finest colored mineralogies ever published. The process employed in producing this work initially involved the direct printing of primary colors on the plates, rather than the then common practise of hand coloring. By successive overprinting, each time with one of four different color inks, an accurate portrayal of the minerals was achieved. The process proves so successful within this volume, that this work ranks among the very finest of the early colored mineralogies ever published. Unfortunately for the collector, this work must also be considered to be among the very rarest of colored mineral books.

In 1776, Fabien was granted a Royal Permission to print and sell a general *Histoire Naturelle*, which would describe and illustrate the three realms of nature. The 1781 announcement and request for subscribers clearly outlined his intentions for the work. It would commence with a description of the mineral kingdom (Règne Minéral), and would appear in 8-10 "cassiers," each with ten plates (decades) and explanatory text by the great French crystallographer, JEAN BAPTISTE LOUIS ROMÉ DE L'ISLE. Recommendations from mineralogists would be sought on which specimens to illustrate so that the reading public could gain a larger appreciation for this kingdom of nature. However, due to the death of d'Agoty soon after printing began, the publication as it was envisioned was never finished. In fact, only six or seven cassiers were published, and of these only the first three were engraved, printed and sold under Fabien's supervision. The remaining parts were published by his widow, Madame Veuve d'Agoty, whose name appears on the wrappers beginning with the fourth issue. In her efforts to complete the book she was assisted by FRANÇOIS LOUIS SWEBACH DESFONTAINES

and Bonvallet both of whom designed and engraved plates 31-40, while Desfontaines continued on alone producing plates 50-70 that comprise the remainder of the work.

Many references to the first four installments appear in the second edition of Romé de l'Isle's *Cristallographie* (4 vols., Paris, 1783). But after those mentions the publishing history is obscure. The fact that the majority of copies of this book contain forty or less plates indicate the publication lapsed for some time after the fourth decade was issued. Only a few copies are known to contain plates 50-60, and only the *British Library Catalog* lists a copy with seventy plates, although no description text accompanies plates 61-70. The lack of descriptions with the plates may indicate that the final installment was prepared after Romé de l'Isle's death in 1790. One last tantalizing clue appeared in the "Avertissement" to Desfontaine's *Manuel Cristallographie* (Paris, 1792). There he explains that he will complete a work begun by Romé de l'Isle and of which seven decades had already appeared. This is undoubtedly a reference to d'Agoty's work, but alas Desfontaine's claim was never fulfilled, and the last hope for continuing Fabien's remarkable book evaporated.

There is strong indication that coloring the plates by successive overprinting probably caused tremendous difficulties. Of the several copies of this work examined, all contain a mixture of plates that are either color printed or hand-colored. The process employed on individual plates can be identified by looking for the four tiny pin holes at the corners of the color printed plates that were used to register the paper on the press. In addition, plates 1-40 that are known to have been color printed, are also known in hand colored states. Copies of this book with color print plates are the more uncommon and more desirable to obtain.

Facsimile reprint, 1991: Natural | History | Or | General Exposition | Of All Its Parts | Engraved And Printed In Natural Colors; With Historical Notes. | By Mr. Fabien Gautier D'Agoty, 5th son. | [double rule] | 1st Part, Mineral Kingdom. | [double rule] | Paris, | From The Printing House Of Monsieur, | under the direction of P. This facsimile edition of the *Histoire Naturelle* was published as part of a series of limited reproductions of rare, illustrated mineralogical works prepared by Wendell E. Wilson of the *Mineralogical Record*. This reprint contains translations of the Privilège Du Roi and d'Agoty's preface. Additional introductory material provides historical information about the author and the printing history of the book, as well as a descriptive list of

GAUTHIER D'AGOTY

the plate contents in English. The complete text in French of the original is reproduced as are plates 1-70. Nine of the plates are reproduced twice to show the difference between first and second state impressions.

GAUTHIER D'AGOTY, Jacques-Fabien. (BORN: Marseille, Franch, 1716; DIED: Paris, France, 1785) *French printer & publisher.*

In his youth, Gauthier d'Agoty was probably trained as an artist and engraver. He moved to Paris about 1736, and became an apprentice to Jacques Christophe Leblon [1670-1741] who had secured in 1737 an exclusive privilege to use a three color printing process that he had invented. In 1738 Gauthier struck out on his own and founded his own printing and engraving operation that utilized a four color process to improve the final renderings. Thus established Gauthier produced color plates showing historical scenes, landscapes, portraits, anatomical diagrams, flowers, and other natural objects.

VERY RARE. Edited by Jacques-Fabien Gauthier d'Agoty. This rare periodical publication contains information about the arts and sciences, new discoveries, and philosophical and artistic controversies. It was illustrated with plates engraved using the process invented by J.C. Le Blon and improved by Gauthier D'Agoty. The illustrations were printed from four separate plates colored with red, yellow, blue, and black inks.

Continued as: *Observations Périodiques sur la Physique, l'Histoire Naturelle, et les Beaux-Arts*, of which volume one was edited by J. Gauthier d'Agoty and volume two by F.V. Toussaint. The plates were

executed by Arnaud Eloï Gauthier d'Agoty [1741-1780], first son of the editor.

Gautier, inventeur de la Théorie de l'art d'imprimer les | Tableaux, de l'Académie de Dijon, & Pensionnaire du Roi. | [ornament] | A Paris, chez l'Auteur, | A son Bureau de Vente, vis-à-vis la Comédie François, dans | la maison de M. le Roi, marchand Bijoutier. | A son Imprimerie, au-dessus de l'Observatoire, après la Bar- | rière S. Jacques. | [rule] | Le Bureau ci-dessus est ouvert sous les Mercredis de chaque semaine, depuis dix heures | du matin jusqu' à six heures du soir. Le prix de chaque Planche, ou seuille, est de | six sols. | [double rule] | M. DCC.

LVII. | Avec Privilege Du Roi.

4°: [34] p., 43 mezzotint plates (printed in colors).

VERY RARE. The majority of these plates relate to the anatomy of the humans. They were sold separately by subscription and amounted to a total of 43 exquisitely colored depictions executed by Jacques Gauthier d'Agoty and his son Arnaud Eloï Gauthier d'Agoty [1741-1780]. The title indicates that one or more plates are relevant to mineralogy, but no copy of this work has been examined to authenticate this supposition.

VERY RARE. This widely unknown work is based upon the title a remarkable and important study that describes the history and the application in the arts, industry, the economy, medicine, etc., substances that derive from the three reigns of nature and which are

employed by the Japanese and Chinese. The present title concentrates on the inorganic and mineralogical objects and was published across two parts in 1878 and 1883 (it is not known if the other two realms were ever published). Included are descriptions of the minerals and mineral resources as they were known in late nineteenth century China and Japan. The author a chemist and prize winning mineral collector has relied heavily on previous books to formulate the body of his own work. His citations include ancient native works as well as titles published since 1712 by European visitors. Full historical descriptions are given of the ancient oriental technologies for mining and the processing of the recovered ores. Some of these are depicted on the plates that show oriental figures at work mining and milling ore as well as depictions of the ancient tools used in mining. Mention is also made of the mineral species known in the region. The work was published in Yokohama, Japan by C. Lévy who arrived in 1868, founded a French language newspaper and printed small press runs of works for the small group of Europeans that were established in Japan.

VERY RARE. Dissertation – Christian Frieder Kadelbach, respondent. A philosophical discussion of the external characters of minerals. As a student, Werner obtained a copy of this work, and started about translating it into German. However, the errors in Kadelbach's work caused him to abandon the translation and publish his own original treatise, *Von den äusserlichen Kennzeichen der Fossilien*, in 1774.

Reprint, 1790: The British Library reports that Gehler's dissertation was reprinted in Christian Friedrich Ludwig's, *Delectus opusculorum ad scientiam naturalem spectantium*. Volumen primum. Edidit Christianus Frider. Ludwig. Lipsiae, Apud S.L. Crusium, 1790. vi, 560 p., 7 plates. [No more published.; BL, 958.h.17.; cf. Pritzel (2nd ed.), no. 5658.]

GEIKE, Archibald. (BORN: Edinburgh, Scotland, 28 December 1835; DIED: Halsemere, Surrey, England, 10 November 1924) *Scottish geologist*.

In the early part of this century, one of the most well known and respected geologists was Edinburgh-born Archibald Geikie, expert on the processes of erosion. In 1855, Geikie was appointed to the Geological Survey of Great Britain under Murchison and ten years later was elected to the prestigious Royal Society, also becoming the first Director of the Scottish Geological Survey founded in 1867. Geikie's studies showed that rivers play a major role in soil erosion and established him as the foremost advocate of the fluvial theories of erosion. His best own works include: *The Scenery of Scotland* (1865), *Life of Sir R. J. Murchison* (1875), *Test-Book of Geology* (1882), *The Founders of Geology* (1897), *The Ancient Volcanoes of Great Britain* (1897) and *Outlines of Field Geology* (1876), most of which have remained in general use, having been reissued at various dates.

8°: [i]-xi, [1], [1]-486, [2] p., index. PAGE SIZE: 224 x 142 mm.

CONTENTS: [i-ii], Half title page, "The Founders of Geology," verso ornament.; [iii-iv], Title page, verso "First Edition (Extra Crown 8vo) 1897. | ..."; [v]-vii, "Preface."—dated 9 November 1905.; [viii], Blank.; [ix]-xi, "Contents."; [1 pg], Blank.; [1]-473, Text.; [474]-486, "Index."; [2 pgs], Publisher's list.

SCARCE. One of the best histories of geology and accompanying sciences ever published in the English language. It recounts the story of the progress of geological ideas by reviewing the careers of some of the leaders by whom the progress was chiefly effected, giving full consideration to the lives and work of these major figures, and indicating in the process how geological ideas arose and were slowly worked out into the forms which they now wear. Some of the men whose careers and contributions are examined are Palissy, Guettard, Desmarest, Pallas, De Saussure, Arduino, Lehmann, Fuchsel, Werner, Hutton, Playfair, Sir James Hall, Giraud-Soulavie, Cuvier, Michell, Lyell, Logan, Darwin, Agassiz, Nicol, and others.

The author discusses such matters as geological ideas among the Greeks and Romans; growth of geological ideas in the Middle Ages; scientific cosmogonists- Descartes and Leibnitz; the rise of geology in France; the foundation of volcanic geology; the rise of geological travel; the history of the doctrine of geological succession; the Wernerian school of geology; the rise of the modern conception of the theory of the earth; the birth of experimental geology; the rise of stratigraphical geology and paleontology; early teachers and textbooks; the transition or Greywacke formation resolved into the Cambrian, Silurian and Devonian systems; the primordial fauna of Barrande; the pre-Cambrian rocks first begun to be set in order; the influence of Darwin; adoption of zonal stratigraphy of fossiliferous rocks; the rise of glacial geology; the development of geological map-making in Europe and North America; the rise of petrographical geology; and other related topics.

GELLERT

GELLERT, Christlieb Ehregott. (BORN: Haynichen near Freiberg, Germany, 11 August 1713; DIED: Freiberg, Germany, 18 May 1795) *German chemist & metallurgist.*

Brother of a famous German poet. Gellert studied at Meissen and Leipzig. From 1736 through 1737, he worked as an instructor at the Gymnasium in Petersburg, then he became adjunct at the Akademie der Wissenschaften until 1746. In 1747 he settled in the mining town of Freiberg he held several positions related to the mining and metallurgical industry. At the founding of the BergAkademie in 1765, he was appointed professor of metallurgy and chemistry. Gellert introduced the process of cold extraction of precious metals by the use of mercury, a works (the largest of the time) being built in at Halsbruck in 1790.

VERY SCARCE. Second greatly enlarged edition of this very popular work on metallurgical and mineralogical chemistry. It includes the addition of a second volume titled *Anfangsgründe zur Probierkunst*, which provides an introduction to assaying techniques. In this work he modified Geoffrey's affinity table by having a table of 28 columns of symbols in which substances having the least affinity with the substance at the head of the column are put on top, i.e. the reverse of Geoffrey's order. In this work on the density of alloys he showed that this may be greater or less than the calculated by the mixture rule; it was mostly greater. Gellert attributes this to the existence of pores in the metals. He also experimented the magnetism of alloys of iron.

METALLURGIC CHYMISTRY, 1776

Tab. I-IV), one large folding table (facing page 184). PAGE SIZE: 210 x 130 mm.

CONTENTS: [2 pgs], Half title page, "Metallurgic | Chymistry. | In Two Parts," verso blank.; [2 pgs], Title page, verso blank.; [i]-iii, Dedication to the Royal Society signed John Seiferth, 20 August 1766.; [1 pg], Blank.; [i]-iv, "To The | Reader."—dated 4 June 1776.; v-viii, "The | Author's Preface, | To The | Theoretical and Practical Part.;" [ix]-xv, "Contents | Of | Metallurgical Chymistry.;" [1 pg], Blank.; [1]-381, Text.; [382], "Errata.;" [383]-416, "The | Index.;" [At end], Plates.

PLATES: The title of the large folding table is: "A Table which shews how different bodies dissolve one another." It along with the four folding plates are all signed "Jn.^o Lodge sculp." The plates consist of Tab. I showing various chemical apparatus, and Tabs. II-IV, illustrating cross-sections of various furnaces. John Lodge (DIED: London(?), England, 4 April 1796) English copper engraver. Produced many portraits. Ref: Thieme, U. & Becker, F. (1907-50): 23, 311.

VERY SCARCE. Translation by John Seiferth [*fl.* 1775] from the first volume only of *Anfangsgründe zur metallurgischen Chymie* (Leipzig, 1751-5). This remarkable and highly valued work is one of the most comprehensive textbooks written in the 18th century. It provides interesting details on many theoretical and practical subjects related to mineralogy and chemistry. Gellert wrote it partially as a duty of his office as assayer in Freiberg and partially because no other treatise sufficiently covered its subject. The text is divided into 2 parts. The first concerns theoretical matters and includes what is essentially a textbook of mineralogy, including discussions of minerals in general, and the classification of species into Earths, Stones, Salts, Phlogiston, Metals, Semi-Metals, Ores and Mineral Earths and Waters. Other theoretical sections describe chemical agents such as fire, air, water and earth, chemical apparatus, and chemical manipulation derived

from numerous previous authors. Practical considerations are covered in the second part of the text. Here 97 experiments are described in detail, and events such as the extraction of salts and solutions from vegetables, manufacture of nitre, salt ammoniac, vitriol, alum and various acids are covered. Throughout the entire work, Gellert has infused the text with practical observations based on his own experience.

GENTH

GENTH, Frederick August Ludwig Karl Wilhelm.

(BORN: Wächtersbach, Hess-Cassel, Germany, 17 May 1820; DIED: Philadelphia, Pennsylvania, U.S.A., 2 February 1893) *German chemist & mineralogist.*

Genth attended the University of Marburg, 1845-1848. Thereafter he emigrated to the U.S.A., finding employment as a mining geologist throughout much of his career. In 1872, he became professor of chemistry at the University of Pennsylvania. He remained there until 1888. He was appointed the chief chemist and mineralogist of the second Pennsylvania Geological Survey. Genth's research focused on rare minerals and meteorites, and he eventually described 23 new mineral species. He advertised his mineral collection for sale, but this was eventually given, bequeathed or purchased by Pennsylvania State University.

The Minerals | And | Mineral Localities | Of | North Carolina, | Being Chapter I, Of The Second Volume Of The | Geology Of North Carolina. | [rule] | Reprinted by Order of the Board of Agriculture. | [rule] | Raleigh: | P.M. Hale, State Printer and Binder. | 1885.

8°: [1]-128 p. **PAGE SIZE:** 216 x 134 mm.

CONTENTS: [1-2], Title page, verso "Presses of | E.M. Uzzell | Raleigh, N.C."; [3]-93, Text (=Descriptive mineralogy of North Carolina minerals.); [94], Blank.; 95-128, "Synopsis | Of | Minerals And Mineral Localities By Counties."

SCARCE. Co-authored with W.C. Kerr, who was State Geologist of North Carolina, this is a

description of minerals found in that state, reprinted as a separate book from volume two of the larger *Geology of North Carolina*. The first section gives a descriptive mineralogy of North Carolina minerals, while the remainder of the text provides a "synopsis of minerals and mineral localities by counties".

ÉTIENNE FRANÇOIS GEOFFROY

GEOFFROY, Étienne François. (BORN: Paris, France, 13 February 1672; DIED: Paris, France, 6 January 1731) *French apothecary & chemist.*

Geoffroy was the fifth generation of a prominent family of Parisian apothecaries that extended back to 1584. He learned the trade from his father, and was further inspired by the many scientists that visited the family residence. He attended the University in Montpellier where he attended courses at the medical school without matriculating. Returning to Paris in 1694, he became a master apothecary, later turning his attention to the study of medicine. He earned the bachelor's degree in Paris in 1702, and eventually graduated M.D. at Paris in 1704. This was followed by a succession of positions at a number of institutions around Paris: 1707, demonstrator at the Jardin du Roi. 1709-1731, professor of medicine at the Collège Royal. 1712, lecturer in chemistry at the Jardin du Roi. 1712-1730, professor of chemistry at the Jardin du Roi. 1715, pensionnaire chemist the the Académie. 1726/7-1728/9, dean of the Paris Faculty of Medicine.

GEORGI

GEORGI, Johann Gottlieb. (BORN: Gut Wachholzhausen, Pommern, Germany, 31 December 1729; DIED: St. Petersburg, Russia, 27 October 1802) *German apothecary.*

Georgi established an apothecary in Stendal, but moved his establishment in 1770 to St. Petersburg. Using this as a home base he made many explorations in the Russian territory. In 1783, he was elected a member of the Academy of Science in St. Petersburg.

Bemerkungen | einer | Reise | im | Rußischen Reich | Im Jahre 1772 | von | Joh. Gottl. Georgi, | Mitgl. der Berl. Naturforschenden Gesellschaft. | [rule] | Erster Band. | [rule] | [ornate rule] | St. Petersburg. | Gedruckt bey der Kayserl. Academie der Wissenschaften 1775.

2 vols. [VOL 1] 8°: [14], 506 p., 6 plates, one map. [VOL 2] 8°: [2], [507]-920 p.

RARE. Georgi participated in academic expeditions to explore the Russian Empire. His travel account

contains information on the ethnology, economy, biology and geology of the areas visited. The first volume includes a detailed map of Lake Baikal. During the 1772 journey, Georgi worked alongside the ailing Johan Peter Falck, who committed suicide in Kazan in 1774. The second volume continues with his journey with Peter Simon Pallas from Irkutsk to Ekaterinburg, across the Urals, and back to St. Petersburg in 1773-74. Special emphasis is placed on the mines and foundries of the Perm region.

RARE. REWORK COMMENTARY: The chief work of the author, one of the most prolific among the numerous German scholars who studied the Russian empire under Pallas. The first volume contains the descriptions of the waters and mountains, as well as the overview and sources for the complete work.

Contained in Theil one (1797) is a history of the physical and natural history of the Russian empire, "Zur Geschichte der physikalischen und naturhistorischen Kenntniß des Russischen Reichs" (pp. 48-74).

Contained in Theil one (1797) is a history of mining and mine processing in the Russian empire, "Zur Geschichte des Russischen Bergbaues und Hüttenwesens" (pp. 103-110, 135-137, 161-166, 181-195, 203-204 and 222-231).

Contents: Teil 1. Geographisch-physikalische und naturhistorische Beschreibung des Rußischen Reichs zur

Uebersicht bisheriger Kenntnisse von demselben. Teil 2, Abt. 1. Beschreibung der einzelnen Gouvernements. Teil 2, Abt. 2. Beschreibung der einzelnen Gouvernements. Teil 2, Abt. 3. Beschreibung der einzelnen Gouvernements. Teil 2, Abt. 4. Systematische Anzeige bisher bekannt gewordener Wasserarten. Teil 3, Abt. 1. Vorhandene Mineralien. Teil 3, Abt. 2. Inländische Mineralien. Teil 3, Abt. 3. Inländische Pflanzen der ersten bis dreyzehnten Klasse des Systems des Ritters Carl von Linné. Teil 3, Abt. 4. Inländische Pflanzen der vierzehnten bis letzten Klasse des Systems des Ritters Carl von Linné. Teil 3, Abt. 5. Bisher bekannt gewordene Thierarten. Teil 3, Abt. 6. Bisher bekannt gewordene Thierarten. Teil 3, Abt. 7. Geographisch-physikalische und naturhistorische Beschreibung des Rußischen Reichs zur Uebersicht bisheriger Kenntnisse von demselben. Teil 4. Nachträge. Geographisch-physikalische und naturhistorische Beschreibung des Rußischen Reichs zur Uebersicht bisheriger Kenntnisse von demselben.

D. Carl Abraham Gerhard, | [...3 lines of titles and memberships...] | Beiträge | zur | Chymie und Geschichte | des | Mineralreichs. | [rule] | Erster Theil. | [rule] | [vignette] | [rule] | Berlin 1773. | bei Christian Friedrich Himburg.

2 vols. [VOL 1: 1773] 8°: [6], 394 p., title vignette, one engraved folding plate of mineral specimens. [VOL 2: 1776] 8°: [4], 300 p., 5 large folding plates of apparatus.

VERY SCARCE. First edition of this scarce encyclopaedia of all known minerals and a comprehensive treatise of mineralogy. - Carl Abraham Gerhard (1738-1821) was the founder and professor of mineralogy and mining sciences at the Berlin Mining Academy (Berliner Bergakademie). He rose to privy councillor for finance, war, and crown lands in Prussia and later became commissary for the administration of mines and smelting works and was appointed councillor for mining in 1779. A member of many scientific societies, Gerhard wrote chiefly on mineralogy, but he also considered geology, medicine, botany, natural history, and chemistry. He devised in 1786 a new mineralogical system, outlined in

Grundriss des Mineralsystems zu Vorlesungen in which he stressed chemical composition. - A polymath and a collector, Gerhard built an important collection of minerals and other curiosities of nature. These were deposited in the Academy in 1781 in return for a pension. They formed the core of the Academy's holdings, were extensively used, and were generously supplemented by other collectors. Today, his minerals and his archive are preserved in the Berlin Institute for Mineralogy.

2 vols. [VOL 1: 1781] 8°: [i]-xxxx, 302 p., title vignette, 10 plates (folding; 7 hand-colored). [VOL 2: 1782] 8°: viii, 424 p.

SCARCE. Volume one provides descriptions of the properties of minerals, theories on the internal structure of the earth, techniques for locating mineral veins, etc. Volume two explains Gerhard's system of mineral classification, which was based on the previous systems of Bergman, Born, Werner, Wallerius and Cronstedt. Following this is a descriptive mineralogy listing the minerals according to Gerhard's classification.

GRUNDRISS DES MINERALSYSTEMS, 1786

1864. — German, 1786 [First edition].

D. Carl Abraham Gerhards, | [...7 lines of titles and memberships...] | Grundriß | Des | Mineralsystems | zu Vorlesungen. | [rule] | [double rule] | Berlin, 1786. | bei Christian Friedrich Himburg.

8°: π^4 A-T⁸ U⁶; 162 ℓ .; [8], [1]-310, [2] blank, [4] p., one folding table. PAGE SIZE: 202 x 115 mm.

CONTENTS: [2 pgs], Title page, verso blank.; [6 pgs], "Vorrede."; [1]-310, Text.; [2 pgs], Blanks.; [4 pgs], "Inhalt."; [At end], One folding table.

VERY SCARCE. This is Gerhard's introduction to his new mineralogical system. After a short introduction that provides definitions and an overview of the classification system, the descriptive mineralogy is presented. This system divides the minerals into four classes: Earths and Stones, Salts, Inflammable Minerals and Metals. It is based in part on the theories of

GERMAR

Werner and it stresses the chemical composition of a mineral species to determine its placement within the classification. Three appendices follow the descriptive mineralogy. The first on pages 281–287 deals with newly discovered species and those minerals not yet fully described. The second on pages 287–291 covers petrifications and fossils, while the third pages 291–310 is concerned with volcanic ejecta and basalt. The folding table at the end provides a general list of physical properties for various mineral groups.

VERY SCARCE. Second edition. The first edition appeared in 1824 as *Neue Ausgabe von Meinecke's Lehrbuch herausgegeben von E.F. Germar*. See under: Johann Ludwig Georg Meinecke.

A through introduction to mineralogy, geology and paleontology. The text is divided into six sections, i.e. introduction, physical characteristics, systematic mineralogy, geognosy, petrifications, and history and literature.

REFERENCES: BL: [973.c.28.].

GERSAINT, Edme François. (BORN: Paris, France, 1694; DIED: Paris, France, 24 March 1750) *French antiquarian, art collector & dealer.*

On Gersaint's marriage in 1718 to Marie-Louise Sirois [1698-1725] he came within the circle of Antoine Watteau's closest friends and this determined his future life. Just prior to his marriage, Gersaint had purchased the stock and business of the painter and dealer Antoine Dieu; however, a few days after he took possession, the building and its contents were destroyed by fire. Although this must have been a set back, Gersaint continued and through his connections with the artists of Paris was quickly able to build his stock back up. He soon became one of the best known art dealers of the eighteenth century. By the early 1730's, Gersaint had developed interests in shells, minerals, lacquer and porcelain. He made several journeys during the 1730s to the Netherlands in search of stock. This resulted in a series of catalogues of the curiosities, as well as prints and drawings, which he offered for sale. Gersaint took an early interest in the etchings of Rembrandt, of which his catalogue raisonné was published posthumously in 1751.

8°: vii, 167, [5] p., frontispiece (arrangement of corals and shells; designed by Duflos, engraved by Boucher; identical to the frontis of the 1744 *Catalogue*).

RARE. Ostensibly a sale catalog of the author’s natural history collection, but actually a pocket-size introduction to conchology. It contains some observations on shells, a list of the principle cabinets of shells in France and Holland, and at pages 30-45 a bibliography of the more important conchological titles. It was published after the author had returned to Paris from an extended trip throughout Holland. Although principally on shells, the list of cabinets contains some useful information for the history of mineralogy as it pertains to the natural history cabinets.

VERY RARE. Comté Joseph Bonnier de la Mosson [see note below], a wealthy amateur, was the owner of one of the most famous collections of natural history objects and scientific instruments. This sale catalog lists 966 lots with brief descriptions, including illustrated books and works of art. Among the different sections of the scientific collections may be mentioned the following: Cabinet d'Anatomie (pages 1-4), Cabinet de Chimie ou Laboratoire (pages 5-16), Cabinet de Pharmacie (pages 11-18), the natural history cabinet containing mostly minerals (pages 54-82), and the Cabinet de Mécanique et de Physique (pages 83-172), in which 222 scientific instruments and machines are listed and described in detail, including descriptions of many microscopes and a whole treatise on telescopes (pages 116-20).

Comté Joseph Bonnier de la Mosson. (BORN: Montpellier, France, 6 September 1702; DIED: Paris, France, 26 July 1744) *French financier, patron and collector*. In 1726 Bonnier resigned from a successful military career in order to succeed his father as treasurer for the États du Languedoc. Bonnier divided his time between Paris and Montpellier. He built a very large collection of natural history objects, including minerals. A major portion of this accumulation was ultimately acquired by the Natural History Museum in Paris.

Catalogue Raisonné des Diverses Curiosités du Cabinet de feu M. Quentin de Lorangère. Composé de Tableaux Originaux des Meilleurs Maîtres de Flandres; d'une Très-Nombreuse Collection de desseins & d'estampes de toutes les écoles; de plusieurs atlas & suites de cartes; de quantité de morceaux de topographie, & d'un coquillier fait

avec choix.... [Avec] quelques courtes notes sur les principaux maîtres anciens & modernes dont on n'avoit rien dit dans le courant du catalogue, ainsi que sur leurs ouvrages. Paris, Jacques Barois, 1744.

12°: xviii, [4], 294, [2], 96 p., frontispiece (gentlemen viewing the collection designed and engraved by Cochin).

RARE. Auction catalog of Quentin de Lorangère [see note below]. The sale took place 2 March 1744 and days thereafter. This is one of the most important catalogs prepared by the prolific Gersaint and is innovative in several ways. Besides the substantial descriptions of the collection objects, he has included biographies of several artists. In addition, the catalog also includes the most complete list of the work of the French artist and engraver, Jacques Callot [1592-1635], including prints not included in the sale.

The collection was notable for its fine paintings, drawings and prints. The drawings were mainly Dutch and Flemish, including numerous landscapes, or French. Also included were a group of almost 500 drawings by Claude Gillot. The prints represented a comprehensive survey of the Northern, Italian and French schools. Also included in this catalog are his collections of illuminations, books, shells, corals, atlases and maps, and natural history objects including a few minerals.

Quentin de Lorangère. (BORN: ; DIED: Paris, France?, before March 1744) *French patron & collector*. French art patron and collector. Quentin is only known through the sale of his collections, which began in Paris on 2 March 1744. He had been a collector for some time, as Gersaint records that he had sold his own extensive shell collection to Quentin in 1737.

GERSAINT

objects; engraved by Cochin). PAGE SIZE: 166 x 98 mm.

VERY SCARCE. Collection catalog of M. le Chevalier de La Roque's [see note below] collections. La Roque was enthusiastic for the visual arts as expressed in his eclectic collection, which is described in some detail in this sales catalogue. Gersaint was among his circle of friends and he has written a fine catalogue of the collections. In addition to paintings, there are also described line drawings, prints, bronzes, sculptures, porcelain, lacquer, diamonds, semi-precious stones, engraved gems, shells, corals, books, and maps. Many of the 300 pictures are the product of Dutch and Flemish masters including several by Rubens and Rembrandt. The precious stones, agates, engraved gems and coral are described on pages 109-162. Included are diamonds, rubies, sapphires, emeralds, topaz, oriental amethyst, turquoise, opal, etc.

Chevalier Antoine de la Roque. (BORN: Marseille, Franch, 1672; DIED: Paris, France, October 1744) *French dramatist, journalist & poet.* French soldier, dramatist, journalist, poet and collector. La Roque was the son of a family of successful merchants, and travelled widely in France and abroad, including Constantinople and the Levant. He fought in the War of the Spanish Succession, losing a leg at the Battle of Malplaquet (1709), for which he was awarded a pension by Louis XIV. He knew many artists and writers, having himself composed several operas. In 1721 he became associated with the semi-official periodical, *Merure de France*, of which he became owner and publisher in 1724.

| Avec Approbation Et Privilege.

8°: viii, 94, [2] p.

VERY RARE. Posthumous auction sale catalog of Claude-Joseph Geoffroy's [see note below] natural history cabinet, listing 597 lots of minerals, crystals, petrifications, shells, corals, and other curiosities of nature, which was one of the more important 18th century cabinets. According to Lugt, the sale took place after 5 February 1754 and following days. Since this catalogue appeared several years after Gersaint's death, it is likely that it was prepared years before and updated by Geoffroy as new objects were added. "Les Pétrifications, les Pierres fines, & les Crystaux forment une belle suite; mais surtout celle des Mines est très riche, & l'on y reconnaît le goût du Possesseur de ce Cabinet, pour la Minéralogie et la Chymie" (Preface).

Claude-Joseph Geoffroy. (BORN: Paris, France, 8 August 1685; DIED: Paris, France, March 1752) *French botanist & chemist.* Geoffroy was born into an important family of Parisian apothecaries, which is the profession he followed. Through his profession he became a competent botanist and when chemistry attracted his attention, he pursued the study with intensity. He was elected a member

to the class of chemistry in the Royal Academy of Sciences in Paris on 7 December 1715.

GESNER, Abraham. (BORN: Cornwallis Township, Nova Scotia, 1797; DIED: Halifax, Nova Scotia, 29 April 1864) *Canadian geologist.*

Early on Gesner developed an interest in geology. After he studied medicine in London, he returned to Parrsboro, Nova Scotia, setting up a medical practice and in his spare time he collected fossils from the area. It is said Gesner often gathered specimens on his way to and from house calls, and built up an extensive collection. In 1838, he became the first government geologist in a British colony when appointed Provincial Geologist of New Brunswick. In an effort to combat a serious personal debt, in April 1842 he opened the first museum in Canada, "Gesner Museum", where he charged admission to view his private collection. His creditors eventually took over his collection in lieu of payment, however. In 1890, it was acquired by the Natural History Society of New Brunswick and added to the New Brunswick Natural History Museum in St John as the core of the museum. Gesner then immigrated to the United States where he developed and patented a process for manufacturing kerosene, for which he is still famous. Gesner was invited back to Dalhousie University, Nova Scotia, as a professor of chemistry, but died shortly thereafter.

Office, Halifax, Nova Scotia. | 1836.

8°: xl, 272, [2] p., one folded lithographed frontispiece, one folded handcolored geological map and one lithographed plate.

CONTENTS: [2 pgs], Title page, verso blank.; [i-ii], Dedication to Viscount Valentia, signed Abraham Gesner, 1836.; iii-xxii, "Preface."—signed Abraham Gesner, July, 1836.; [xiv]-xxviii, "Introduction | To The | Study Of Geology."; xxix-xl, "Introduction | To The | Study Of Mineralogy."; [1 pg], Blank.; [Map, folding.]; [1]-265, Text.; [266], "Errata."; [267]-272, "Index."

SCARCE. The first serious and methodical survey of the geological and mineralogical resources of Nova Scotia. Gesner, a surgeon who wrote on geological subjects, did much if not all of the footwork for this study himself. Gesner includes both commercial subjects such as clays and coals, granites, marbles, copper and such, and also semi-precious stones and

GESNER

gems. The nicely colored map was not originally planned for- "It was not intended, when the Prospectus of this Work was written, to give a Geological Map of the Province, or any pictorial illustrations of its scenery; but from the general support the book has received, a map has been prepared, at a considerable additional expense.". He divides the country into four districts and discusses each in turn, as well as providing a concise introduction to the sciences of geology and mineralogy, including explanations of the competing theories of this still-developing field. Plates: frontispiece of Farrsboro as seen from the harbor, a folding colored map of Nova Scotia, with the tipped-in explanation; a lithographed plate of Cape Split.

GESNER

GESNER, Conrad. (BORN: Zurich, Switzerland, 26 March 1516; DIED: Zurich, Switzerland, 13 December 1565) *Swiss polymath.*

Gesner received a classical education at Strasbourg, Bourges, Paris and Basel. He became professor of Greek, at the University of Lausanne, 1537-40. Gesner furthered his education by studying medicine at Montpellier and Basel, finally receiving his M.D. from the later in 1541. Became lecturer in Zurich, 1546-67, as well as city physician from 1554. Gesner was a Renaissance scholar, who applied himself to medicine, linguistics, theology, bibliography, geology, zoology, and botany. His many and important botanical and zoological publications brought Gesner wide recognition and a reputation as one of the greatest naturalists of the sixteenth century. Gesner's *Bibliotheca Universalis* (Zurich, 1545), that lists all Hebrew, Greek, and Latin books known to him in 20 volumes, earned him the title, "Father of Bibliography."

VERY SCARCE, perhaps rare in complete copies. This very important sixteenth century work is a collection of eight separate tracts most with their own title page by seven authors all edited and several with commentary by Gesner. The volume contains an early illustrated work that deals solely with fossils, metals, minerals, and gems, as well as the earliest catalog of a mineral collection. Therefore, this work had a substantial rôle to play in the development of mineralogy and gemology.

The printing history of this collected work is a difficult bibliographic problem. Each of the included works is known to exist as its own separate volume, including Kentman's *Catalogvs*, which does not have a title page. Furthermore, complete collections of these tracts as described here are a rarity. Usually, defects are present in one or more of the individual works, or sometimes complete sections are absent from the collection. This suggests that the collected volume was assembled from the remaining stock of the various treatises by the publisher. Below are given the details of the individual works that are contained in the volume.

[A]. KENTMANN, Johann.

Catalogvs Rerum | fossilivm Io. Kentmani numerus fo- | lij pvncto præeunte, faciem prio- | rem indicat:sequente, po- | steriorem.

8°: [a5v]-[a8v] A-M⁸; 99.5ℓ.; [3.5], 96 f., last folio blank. The half leave is a result of the work starting on the verso of leave a5.

This early catalog describes the "fossils" or "things dug from the earth" collected by JOHANNES KENTMANN. Although some petrified remains of animal and plants are included in the descriptions, it is essentially a portrait of a fifteenth century mineral collection. This treatise is therefore the earliest work to catalog mineralogical items in their own right.

The text gives a detailed inventory of 1,608 individual specimens, with an unusual feature for the period of providing accurate locality information for each sample described. As would be expected, over 1,100 of the specimens originated from the region around Saxony where Kentmann flourished. Yet a suprising aspect are the 472 specimens described as having come from foreign lands. This indicates the vigor and great expense Kentmann used to acquire material for his ever growing collection. Unfortunately, none of the specimens was illustrated. However, a major novelty of the work was a woodcut illustration of the actual mineral cabinet used to store the collection. The picture shows thirteen drawers that were used to segregate the specimens. This closely follows the method of classification outlined in the text.

The system devised by the author is based principally on the work of GEORG AGRICOLA, but modified and enlarged upon Gesner's insistence. It consists of twenty-six major divisions with headings such as earths, stones, flourites, hard-bodied minerals, marbles, ores of gold, silver, copper and lead, pyrites, antimony, iron, etc. Each division was then subdivided according to the kind of species. For example, this separation included male and female loadstone, which respectively, attracted or repelled iron particles. A good modern translation and analysis of Kentmann's work is provided in Prescher, H., J. Helm and G. Fraustadt, "Johannes Kentmanns Mineralienkatalog, aus dem Jahre 1565," *Abhandlungen des Staatlichen Museums für Mineralogie und Geologie zu Dresden*, 30 (1980), 5-152.

[B]. KENTMANN, Johann.

Calcvlorvm | Qvi In Corpo= | Re Ac Membris Ho- | minum innascuntur, genera XII. | depicta descriptaq3, cum Hi- | storijs singulorum ad- | mirandis: | Per Io. Kentmanvm | Dresdensem Medicum. | [ornament] | Tigvri, 1565.

8°: Aa-Cc⁸; 24ℓ.; [2], 22 f., last page blank, 10 woodcuts.

An early, illustrated tract describing the various stones found in the human body. It is perhaps the first description and illustration of gall and kidney stones.

[C]. FABRICIUS, Georg.

De Metallicis | Rebus Ac | Nominibvs Ob= | servationes Variae | & eruditæ, ex schedis Georgij

GESNER

Fabri- | cij: quibus ea potissimum ex- | plicantur,
quæ Georgius | Agricola præ- | terijt. | [ornament]|
Tigvri M.D.LXV.

8°: a-d⁸ e²; 34ℓ.; [3], 31 f.

This short treatise describes the noble and base metals. It consists of eleven chapters that describe gold, silver, lead, copper, tin and the like. Much of Fabricus' commentary is based upon the earlier writings of GEORGIUS AGRICOLA.

[D]. **GOEBEL, Severin.**

De Svccino | Libri Dvo, Avthore | Seuerino
Gœbelio, Medi- | co Doctore. | Horvm Prior Liber
| continet piam commonefactionem, de passio- | ne,
resurrectione, ac beneficijs Christi, | quæ in historia
Succini de- | pinguntur. | Posterior veram de
origine Succini ad- | dit sententiam. | [ornament]|
Tetrastichon in hos libros Conradi | Gesneri Tigurini.
| [...4 lines of text in Greek...].

8°: e-i⁸; 33ℓ.; [2], 31 f., f 30 repeated twice, hence last f should read "31".

One of the earliest treatises on amber containing in its first section strange religious references while the second section describes the origin of amber based upon earlier writers. In the first part, Goebel attributes the many forms, shapes, and inclusions of amber to divine influence and proclaims it to be proof of Christianity. In the second part, he believes amber to be a type of hardened bituminous petroleum, formed inside the earth and subsequently bleed out to the sea floor. Sinkankas (1993) notes other editions appeared in 1566, 1558, 1582 and 1616.

[E]. **CORDUS, Valerius.**

Valerii | Cordi Simesv= | sii De Halosantho | Sev
Spermate Ceti Vvl- | go Dicto, Liber, Nvnc | Primvm
In Lvcm | Æditvs. | [ornament]| Tigvri M. D. LXV.

8°: a-f⁸; 40ℓ.; [3], 37 f.

Cordus' postumous work for which Gesner wrote the preface and commentary. This monograph examines "efflorescences" of salt found floating on the sea, which had come to the notice of ancients Galen and Dioscorides. They prescribed it for relief from skin diseases. Gesner in his commentary which is as long as the treatise itself, refutes the popular belief that these salts were the sperm of whales, and instead attributes the phenomena to salt crystals falling out of the brine solution. A curious medical and mineralogical treatise, with an amusing link to whales.

[F]. **EPIPHANIUS.**

Sancti | Patris E= | piphanii Epi= | scopi Cypri
Ad Dio- | dorum Tyri episcopum, De XII. | Gemmis,
quæ erant in veste Aaronis, | Liber Græcus, & è
regione Latinus, | Iola Hierotarantiano interprete: |
cum Corollario Conra- | di Gesneri. | [ornament]|
Tigvri M. D. LXVI.

8°: (α)-(δ)⁸; 32ℓ.; [4], 28 f., last page blank.

This treatise considers the twelve gemstones contained in the breastplate of Aaron, the High Priest of the Jews and founder of the Jewish priesthood. It is perhaps the earliest printed work to treat the subject,

although many earlier manuscripts existed. It is in the form of a letter from Ephphanius to his friend, Diodorus, Bishop of Tyre, and discusses the jewels set in the breastplate (Exodus 28, 17–20). These stones are: sard, topaz, emerald, carbuncle, sapphire, jasper, lyncurium, agate, amethyst, chrysolite, beryl and onyx. Appended is a short essay describing Biblical mentions of the diamond. Gesner's commentary at the conclusion discusses the stones, with a diagram showing their positions. Sinkankas (1993) for a list of other editions.

[G]. **LA RUE, Francios.**

De Gemmis | Aliqvot, Iis | Præsertim Qvarvm. |
Diuus Ioannes Apostolus in sua Apocalypsi | meminit:
De alijs quoque, quarum vsus hoc | æui apud

medico Insu- | lano. | Editio secunda. nam prima
mutila, & in- | scio authore edita fuerat. | [ornament]|
Tigvri M. D. LXV.

8°: †α-†λ⁸; 87ℓ.; [2], 85 f., misnumbered because f2 is repeated.

This lapidary is the second edition of a work first published at Paris in 1547. The first book describes the origin of gemstones, their virtuous properties, the reasons behind their powers citing numerous earlier writers as authorities, but always stressing that God has the ability to impart such phenomena to stones. The second book is descriptive in nature, treating the characteristics and physical and mystical properties of individual gemstones, including jasper, sapphire, ruby, emerald, beryl, topaz, opal, amber, diamond, etc. Thorndike considers the work to be "... a compendium of past lore with little or nothing in the way of personal observation or classification." Sinkankas (1993) provides a description of the other editions.

[H]. **GESNER, Conrad.**

M. D. LXV.

8°: Aa-Yy⁸; 176ℓ.; [7], 169 f., last page with printer's device, 72 woodcuts.

This work is especially interesting as presenting a picture of the mineral kingdom as seen from the viewpoint of the greatest naturalist of his time. It marks a deliberate departure from earlier medieval lapidaries in that little or no comment is made of the miraculous virtues attributed to minerals. Instead, Gesner describes the characters by which they may be identified. Gesner writes that this work was written rapidly for his own pleasure and recreation and that a more detailed treatment would follow, so that students would be stimulated and encouraged to study minerals,

fossils and stones. However, Gesner died of plague shortly after this treatise was published, and the larger work never appeared.

Gesner writes that *De Rerum Fossilium* is the first work on its subject to be illustrated by cuts and figures. Adams (1938) notes this is substantially correct, although the four illustrations in CHRISTOPH ENZELT's *De Re Metallica* (1st ed., Frankfurt, 1551) predate it. In addition, the lapidary portions of the early herbals, especially the *Hortus Santias* (1st ed., 1491) were commonly illustrated with cuts, sometimes hand-colored. Gesner's work though is the first to contain such a large number of mineralogical illustrations to facilitate the commentary of the text. He hoped that the illustrations in the book would assist students and then refers to the difficulty which he experienced in giving adequate representations of the minerals and rocks as compared to the animals and plants.

Gesner deviates from almost all previous authors on minerals by presenting his description of minerals not as an alphabetical list, but in a true system of classification. In his numerous other writings on plants and animals, he always attempted to classify natural objects in an organized hierarchy. When his attention was turned to minerals, he faced a difficult problem. There was no well defined and recognized form by which the natural objects from the earth could be classified. Furthermore, the fossilized remains of plants and animals were at the time not differentiated from true minerals. Gesner's solution to the problem was quaint and interesting. He writes in the dedicatory epistle that he was unwilling to adopt an alphabetical arrangement as most earlier writers had done because he considered the method to be trivial. In the present work, he intends to present a method that draws upon the form of the substance being described, which is why the illustrations were included. By this method, the classification will follow in the steps of nature, and will by the same measure reveal her secrets.

First taking the simplest of forms of fossils, or those that resemble lines, angles, circles or allied shapes as seen in the heavens or in the elements, Gesner will pass on to consider forms of ever greater complexity, descending as it were by degrees from heaven to the earth. Using this methodology Gesner's classification consists of 15 distinct classes. Class 1 contain those fossils that suggest points, lines and angles. Included are all transparent and translucent minerals, bodies like pumice whose surface depressions are usually rounded in shape, asbestos, natrolite because of their fibrous nature, quartz, pyrite because of their regular angles. Class 2 consider items whose name is derived from some heavenly body or from one of the Aristotelian elements. Included are moonstone, aquamarine, and opal. Class 3 are those that take their name from something in the sky. This embraces all fossil Echinoderms as well as Neolithic stone axes and other weapons. Class 4 are those named after terrestrial objects, like chrysolite, lead and other metallic ores. Class 5 resemble certain artificial things like belemnites (for darts). Class 6

are artificial items made from metals, stones or gems. Included are mariners compass and lead pencils (first pictured in this work). Class 7 resemble plants and herbs. Class 8 are those that have the form of shrubs, like coral. Class 9 resemble trees or portions of trees, such as petrified wood and coal plants. Class 10 Corals. Class 11 are other sea plants that have become stone. Class 12 bear resemblance to men or four footed animals. Native silver because of its hair like form, hematite carnelian, blood stone because of its similarity to blood. Class 13 consist of stones derived from the names of birds. Class 14 resemble things that live in the sea, such as glossoptera (fossil shark teeth). Class 15 have the form of insects or serpents. Included are ammonites, ophites and others, as well as insects included in amber. Interestingly, Gesner considers those items that resemble the fossilized remains of animals to be just that, while other fossils of less distinct form are not. The observations outlined in this work were derived from Gesner's own keen mind, while the depictions of the various items were probably derived from specimens contained in his own collection.

GIESECKE

GIESECKE, Karl Ludwig. (BORN: Augsburg, Germany, 1761; DIED: Dublin, Ireland, 5 March 1833) *German mineralogist, actor & poet.*

Born the son of a craftsman, Giesecke studied for a time in Göttingen, but moved to Vienna and from 1790 to 1804 became a playwright and actor. He is thought by some to be the librettist behind Mozart's last opera, "Die Zauberflöte" (The Magic Flute). He traveled to Copenhagen, and established himself as a mineral dealer. From 1806 to 1813, he explored Greenland collecting minerals, and on his return went to Dublin where he was soon appointed professor of mineralogy at the Royal Academy in Dublin.

DESCRIPTIVE CATALOGUE, 1832.

Lewis Giesecke, 1 March 1832.; [5]-199, "Systematic Collection | Of | Minerals."; [200], Blank.; [201], Sectional title page, "An | Irish | Mineralogy; | or, | A List | Of | Simple Mineral Substances | Hitherto Discovered In Ireland. | [rule] | Dublin: | R. Graisberry, | Printer To The Royal Dublin Society. | [rule] | 1832."; [202], Blank.; [203]-253, "An | Irish Mineralogy, | &c.&c."; [254], Blank.; [255]-268, "Tabular View | Of | The System."

VERY SCARCE. The dedication praises the Royal Dublin Society for allowing Giesecke the opportunity to prepare this catalog of the society's mineral collection. The system chosen for arranging the species is based upon external characters. With the addition of a separate tract on Irish mineralogy that lists those minerals that had so far been discovered in Ireland, it is clear that this *Catalogue* was also intended to help promote the study of mineralogy in the country. The collection was merged with the museums of natural history and industry in 1877 to form the present day National Museum of Ireland.

GILBERT (Gilbert), William. (BORN: Colchester, England, 1544 not 1540; DIED: London, England?, 30 November 1603) *English physicist & natural philosopher.*

Gilbert was born the son of a well-to-do town official. He attended St. John College, Cambridge, from 1558 to 1570 (B.A., 1561, M.A., 1564, M.D., 1569). While attending Cambridge he became a Junior Fellow of St. Johns in 1561. He was the mathematics examiner in the college, 1565-6 and bursar, 1569-70. He became a Senior Fellow in 1569. Although no one knows, it seems likely that Gilbert devoted the decade after his graduation to the study of magnetism. During this period he was supported through inheritances. In late 1507 he established a successful medical practice, becoming one of London's most prominent physicians. From 1600 to 1603, he was one of the personal physicians to Elizabeth I, for which he received a stipend of \$100 from the Royal Treasury. Before Gilbert's death he was also physician to James I.

DE MAGNETE, 1600

1886. — Latin, 1600 [First edition].

Gvilielmi Gil | Berti Colcestren- | Sis, Medici
Londi- | Nensis, | De Magnete, Magneti- | cisque
Corporibvs, Et De Mag- | no magnetē tellure;
Physiologia noua, | plurimis & argumentis, & expe-
rimentis demonstrata. | [ornament] | Londini |
[rule] | Excudebat Petrvs Short Anno | MDC. |
[rule].

2^o: [16], 240 p. Woodcut printer's device on title, Gilbert's woodcut coat of arms on verso, numerous woodcut diagrams & illus. in the text, & one folding woodcut plate.

RARE. The first major English scientific treatise based on experimental methods of research and the foundation work of magnetism and electrical science. Gilbert uses here for the first time the terms "electricity," "electric force," and "electric attraction."

Book I "deals with the history of magnetism from the earliest legends about the lodestone to the facts and theories known to Gilbert's contemporaries...In the last chapter of book I, Gilbert introduced his new basic idea which was to explain all terrestrial magnetic phenomena: his postulate that the earth is a giant lodestone and thus had magnetic properties...The remaining five books of the *De magnete* are concerned with the five magnetic movements: coition, direction, variation, declination, and revolution. Before he began his discussion of coition, however, Gilbert carefully distinguished the attraction due to the amber effect from that caused by the lodestone. This section, chapter 2 of book II, established the study of the amber effect as a discipline separate from that of magnetic phenomena, introduced the vocabulary of electrics, and is the basis for Gilbert's place in the history of electricity."—D.S.B.

GIMMA, Giacinto, Abate. (BORN: Bari, Italy, 1668; DIED: Bari, Italy, 1735) *Italian lawyer, cleric & geologist.*

Gimma studied jurisprudence at the University of Naples. He published a large number of works that he authored or edited on a wide selection of learned subjects.

Canonical Abbot and, great sacred history student and literature, to single vent' years had already completed the course of philosophy and jurisprudence to the university of Naples. The Academy of the Spensierati (Incuriosi) of Rossano founded then in the 1695, but it refused the academic career offertagli near the university of Padova and Torino in order to dedicate itself to erudite and eclectic studies. A its great completed enciclopedico job between 1690 and 1693 is remained unknown. In 1700 taken the orders sacred and was name canonical of the Barium cathedral.

VERY SCARCE. First and only edition of this magnificent work, which is a summation of all that was worth knowing at the time of minerals and gemstones. Adams considered it a guide book to the maze of ancient literature of the geological sciences. It is divided into six books. The first describes gemstones and their precious nature together with extensive references. Other discussions include color, phosphorescence, luminescence, virtues, pricing and fake gemstones. The second book considers the precious stones like diamond, emerald, sapphire, ruby and others. The third describes stones of lesser value and the fourth discusses stones derived from organic sources such as calculi, boazoar and other like stones. The fifth book describes marbles, mosaics, pietre dure inlays and many other similar examples. The sixth book is largely on earths of various kinds.

SCARCE. Co-authored with HENRY LECOQ. The
 text of volume one begins with a description of
 the physical characters of minerals. Then chemical
 characters are considered followed by a discussion of the
 chemical composition of minerals. A review is given of

the previous mineral classifications of Hausmann, Haüy,
 Beudant, Bronigart, and Berzelius. The descriptive
 mineralogy then commences and this is carried through
 most of volume two. A section describing the metals
 in relation to mineralogy and a table of the crystalline
 forms of artificial chemicals close out the work.

 Volume.”; [1 pg], Blank.

SCARCE. Co-authored with HENRY LECOQ. After a
 long introduction, the text of volume one begins with
 a description of the physical characters of minerals.
 Then chemical characters are considered, with a detailed
 examination of how chemistry may be successfully applied
 to mineralogy. Based upon the theories of Berzelius
 [q.v.], a general scheme for classifying minerals with a
 discussion of its underlying principles is then presented.
 Included is an overview of mineralogical nomenclature. The
 descriptive mineralogy then commences and completes the
 first volume. Volume two continues and concludes the
 descriptive mineralogy. Two long sections about geognosie
 and metallurgy complete the text. A subject index to both
 volumes finishes the book.

Furni Novi Philosophici, sive Descriptio Destillatoriae Novae; Nec non Spirituum, Oleorum, Florum, aliorumque Medicamentorum ... Amsterdam, J. Janssonius 1658.

Sm.-8 . 67, (5) pp. (penultimate and last blank). With 1 engraved and folded plate.

VERY SCARCE. (WITH:) GLAUBER: Furnorum philosophicorum pars altera, In qua Describitur secundae fornacis proprietates; cuius beneficio destillari possunt omnia volatilia, subtilia & combustibilia; vegetabilia, animalia & mineralia; viâ quâdam incognitâ hactenus & compendiosâ; quâ nihil perditur omnino, sed spiritus etiam subtilissimi capiuntur, quod alias per retortas, aliaque vasa fieri nequit. Amsterdam, J. Janssonius 1658. Sm.-8 . 148, (4) pp. (WITH:) GLAUBER: Furnorum philosophicorum pars tertia in qua Describitur tertiae fornacis natura, cujus beneficio & quidem absque vesicis & ahenis; aliisque cupreis, ferreis, stanneis & plumbeis instrumentis, spiritus varii vegetabiles ardentis extracta, olea, salia. &c. Adminiculo autem exigui alicujus instrumenti cuprei, vasorumque ligneorum, ad usus tam chymicos quàm medicos praeparari possunt. Amsterdam, J. Janssonius 1658. Sm.-8 . 55 pp. With 2 engraved and folded plates. (WITH:) GLAUBER: Fornacum philosophicarum pars quarta, Continens Descriptionem Fornacis Quartae, cuius beneficio Mineralia & Metalla probantur & examinantur viâ quâdam compendiosiore, quàm hactenus modo illo vulgari; item Metallorum separationem vi fusionis; aliaque necessaria vi fusionis perpetranda. Utilissima Chymicis, Mineralium probatoribus & fossoribus. Amsterdam, J. Janssonius 1658. Sm.-8 . 83, (5) pp. (the last 3 blank). With a full-page woodcut. (WITH:) GLAUBER: Fornacum philosophicarum pars quinta. Ubi agitur de natura Quintae Fornacis mirabili; ut & de instrumentorum & materialium ad praedictos 4. Furnos pertinentium, praeparatione facili. Utilissima Medicinae Hermeticae sectatoribus (-appendix). Amsterdam, J. Janssonius 1651. Sm.-8 . 54 pp., (1) leaf (blank). With 7 - in part full-page - woodcuts. (WITH:) GLAUBER: Annotationes in appendicem quintae Partis Fornacum Philosophicarum, ubi de variis agitur Secretis utilissimis, optimis & incognitis, incredulorum & naturalium Secretorum ignororum gratiâ publicatae. Amsterdam, J. Janssonius 1658. Sm.-8 . 72 pp. Contemporary calf (rubbed, spine defective). 6 parts in 1 vol. Sothran I, 1560 (incompl.).

Second Latin edition, part 5 + appendix in the first one. Very rare to find it complete with all plates. Glauber's main work on chemistry, mineralogy etc. Browned throughout, slim upper margins (affecting in places the head-line). Some browning and damp-staining throughout.

Glauber (1603-1668) apparently self-taught, read books on alchemy, experimented, and conversed with others to educate himself. "After many years of travel, study, and experiment, during which he acquired an extensive knowledge of chemistry, pharmacy, geology, mineralogy, and technology, Glauber in 1646 went to Holland; he settled in 1648 in Amsterdam, where he had a large laboratory, called a 'Hermetic Institute'..." Partington, 341. The "Furni Novi" is Glauber's most famous work and his first, "This is certainly one of the most remarkable books on chemistry of the seventeenth century," Ferguson. It "...contains most of his important chemical discoveries," Partington. The work on potable gold was Glauber's first published treatise and in it he stated that it, "...is next to the philosopher's stone the most outstanding of all medicines, and that there is no difference between them." Thorndike VII, 201. Caillet 4573, 4566. Esoterica 1879. Duveen 258 (later ed.), 252. Ferguson I, 324. Partington II, 344. Hoover 362, 360. Krivatsy 4784, 4774. Wellcome 122, 125.

3 parts bound in one volume. [Part 1] 8°: 67, [3] p. [Part 2] 8°: 47, [1] p. [Part 3] 8°: 110 p.

VERY SCARCE. Translation of original German work: *Operis mineralis*. One of Glauber's most important works, the *Operis Mineralis* discusses all manner of phenomena associated with minerals and the earth. On the origin of ore deposits, Glauber is of

the opinion that if this is not the actual lake of fire prepared for sinners the latter must at least be situated somewhere in the immediate vicinity. He also discusses of the arrangement of the metallic veins in the earth resembling a tree with its branches growing up from the center of the earth. He believed that base metals were continuously transforming to the nobler metals, going continuously forward in time, which in the course of time will result in the final passage to gold. Therefore, when miners found some other mineral substance other than gold, for example bismuth or tin, they have opened up an immature mineral vein. Glauber goes on to observe that if an ore body which has not been worked for some years is again opened that the exposure of the mineral veins to air causes one to frequently find an abundance of silver. It was the believe of the alchemists that the transformation from baser to nobler metals was indeed occurring in the earth's crust when the conditions were favorable. It was the alchemist's goal to recreate those conditions in the laboratory, but to cause the reaction to change more rapidly.

Pars 1. Ubi docetur separatio auri e silicibus, arena, argilla aliisque fossilibus per salis spiritum, quæ alias eliquari nequeunt : item panacea sive medicina universalis antimonialis, ejusque usus – pars 2. De ortu & origine omnium metallorum & mineralium, quo scilicet pacto illa per astra producantur ex aqua & terra corpus sibi suscipiant & multiplici forma formentur – pars 3. In qua titulo commentarii in libellum Paracelsi Coelum philosophorum, sive, Liber vexationum dictum, metallorum transmutationes in genere docentur, cum appendice specialem earum processum, ut & eorundem eliquationem, explorationem, separationem aliasque necessarias operationes demonstrante.

1904. 2nd edition, 1659: *Operis Mineralis* ... Amsterdam, Johann Jansson, 1659.

3 parts in one volume. 8°: 67, [2], 47, 110 p. Separate title pages for each part. One folding illustration, four full-page woodcuts, and four textual woodcut figures. Woodcut ornaments on title pages, tailpieces. Catchwords throughout. PAGE SIZE: 15.25 x 9.5 cm.

VERY SCARCE. Glauber was born at Karlstadt, Germany, and was largely self-educated, visiting laboratories in Paris, Basel, Salzburg, and Vienna where he studied chemistry and alchemy. He was, for a short time after 1635, court apothecary in Giessen. He then settled in Amsterdam where he remained for most of the rest of his life. There he invented furnaces for distilling, and established an elaborate laboratory containing many devices of his own creation. He called himself a chemical philosopher and was a prolific writer. In his later years he leaned more to the extreme edges of alchemy and left off much of his laboratory work. In his mineralogy Glauber was most expert with salts, believing that the sun's power was carried to the earth in an aerial salt. In *OPERIS MINERALIS* he theorized about the sun's rays being concentrated in the earth to produce metals. His *FURNI NOVI PHILOSOPHICI*, first published 1646-49, the second work included here, is among his most famous writings. It is a work on the design and use of furnaces for distilling, extending greatly the numbers and types of

materials that could be distilled. Ferguson calls it "one of the most remarkable books on chemistry of the seventeenth century." Glauber tended to bring more specific chemistry into alchemy than his predecessors had done, yet in much of his thinking he was still an alchemist of the traditional type. Foxed throughout, some pages browned, otherwise a very good copy of two important works in chemistry and alchemy. Thorndyke VII, 197-201. DSB V, 419-423. 1-1399

VERY SCARCE. Glocker's comprehensive treatment of mineralogy. In the first 54 pages of the first part is given a history of mineralogical science and literature review, particular with reference to oryctographical studies. This is followed by a description of crystal form, crystal systems, crystallography, physical characteristics, etc. In the second part, is provided an overview of classification schemes including artsy, chemical, and natural systems. A second section explains how to use the external characteristics to determine a the mineral in a hand specimen. This is followed by a lengthy descriptive mineralogy.

Published as Lieferung 8 of J. A. Buchner's *Vollständiger Inbegriff der Pharmacie in ihren Grundlehren und praktischen Theilen*.

VERY SCARCE. In an effort to keep his comprehensive *Handbuch der Mineralogie* up-to-date, Glocker published a series of seven supplemental Heft from 1835 to 1841 containing notices of mineralogical discoveries for the previous few years. The title described above represents the first four such Heft. Within are descriptions of new techniques, equipment, theories, mineral descriptions, etc. Three others were published under the title *Systematischer Bericht* [which see note below].

Continuation, Heft 5, 1837: Systematischer Bericht | über die | Fortschritte der Mineralogie | im Jahr 1835. | Mit Berücksichtigung der Geologie und Petrefactenkunde. | [tapered rule] | Von | Ernst Friedrich Glocker. | [rule] | Mit Holzschnitten und 2 Tabellen. | [double rule] | Nürnberg, | bei Johann Leonhard Schrag. | 1837. 8°: xii, 410 p., 2 folding tables.

VERY SCARCE. The present work is Glocker's

GRUNDRIS DER MINERALOGIE, 1839

complete introduction to mineralogy, geology and paleontology. The introduction gives reasons for the study of mineralogy as well as a short, but valuable history of the subject. This is followed by a good bibliography of the best literature of mineralogy, crystallography, geology and palaeontology available at the time. Glocker then provides an interesting discussion of the value of mineralogy. General mineralogical topics are then covered, including crystallography, physical and chemical properties (pp. 34-233). A second part is a long, detailed descriptive mineralogy (pp. 235-698). General geological principles are discussed beginning at page 699, including a specific discussion of petrified remains.

RARE. In his work entitled *Generum et Specierum Mineralium Synopsis* Glocker provides a synopsis of his systematic classification of minerals and gives many new chemical analysis of the species. The book is also one of the most extensive attempts at a systematic nomenclature that has been made in mineralogy. He uses in general a Latinized form of the common name for the name of each species, with some descriptive word added. For varieties he adds a third word, as is common in other branches of natural history. For instance, under *Granatus*, garnet, Glocker gives three species: 1st, *Granatus nobilis*, precious garnet; 2d, *Granatus hyacinthinus*, cinnamon garnet; and 3d, *Granatus vulgaris*, common garnet, and under the latter he uses for varieties the terminations *fuscus*, *niger*, *viridis*, *flavus*, and *albidus*. The work is in Latin, thus going back to the style of the scientific books of the previous centuries, which no doubt contributed to his contemporaries, for the most part, to ignore Glocker's ideas.

SCARCE. A very much expanded "translation" by Johann Friedrich Gmelin from the mineralogical section of the 1766-8 Latin edition of Linné's *Systema Naturæ*. According to Soulsby, another edition of volume 4 was published in 1785. It has the pagination, 8°: lxiv, 521, [6] p., 30 plates.

Volume one contains introductory material including a general description of the science, an extensive and important bibliography of mineralogical science and the first portion of the descriptive mineralogy. The remaining volumes contain the bulk of the descriptive mineralogy. At the end of volume four is a comprehensive index.

Allgemeine | Geschichte | der | mineralischen Gifte | entworfen | von | Joh. Friedr. Gmelin | [...3 lines of titles and memberships...] | [ornament] | [rule] | Nürnberg, | bey Gabriel Nicolaus Raspe, 1777.

3 vols. and atlas. [VOL 1: 1776] 8°: 350 (i.e., 348), [2] p. [VOL 2: 1777] 8°: [16], 525 (i.e., 523), [1] p. [VOL 3: 1777] 8°: [8], 316, [16] p. Engraved title vignettes and head pieces. [Atlas] 60 engraved hand-colored plates.

RARE, especially in three volumes. This is the author's *General History of Poisons* published in three parts. Within these volumes are described poisons from the animal, plant and mineral kingdoms. Gmelin provides information on the history of the use of these poisons, their sources, and preparation. There is also a large amount of information pertaining to the pharmaceutical use of the substances.

An extremely rare and widely unknown atlas of 60

hand-colored engraved plates is not mentioned in most bibliographies, but was in fact prepared to accompany this work. No copy of this atlas has been located.

Vol 1 provides a general introduction to the subject and treats poisons derived from animals.

Vol. 2 has title: Allgemeine Geschichte der Pflanzengifte ... Nürnberg, Bey Gabriel Nicolaus Raspe, 1777.

Vol. 3 has title: Allgemeine Geschichte der mineralischen Gifte ... Nürnberg, Bey Gabriel Nicolaus Raspe, 1777.

GMELIN, Johann Georg. (BORN: Tübingen, Germany, 12 June 1709; DIED: Tübingen, Germany, 20 May 1755) *German chemist & mineralogist*.

Gmelin was a member of a large scientifically inclined family. He accepted a lectureship at the Academy of Sciences in St. Petersburg in 1730 and in 1731 was promoted to professor of chemistry and natural sciences. In 1733 he was recruited as part of the scientific corps to accompany a trans-Siberian expedition. He proceeded as far as Yakutsk observing the natural history of Siberia. Several maps are included in his report including this description of the Arctic coast.

D. Johann Georg Gmelins, | [...2 lines of titles and memberships...] | Reise | durch | Sibirien, | von dem Jahr 1733. bis 1743. | Erster Theil. | Mit Kupfern. | [ornament] | [rule] | [...2 lines...] | Göttingen, | verlegt Abraham Vandenhoecks seel., Wittwe, 1751.

4 vols. [VOL 1: 1751] 4°: [26], 467 p., 3 folding plates, one map. [VOL 2: 1752] 4°: [32], 652 p., 5 folding plates, one map. [VOL 3: 1752] 4°: [20], 584 p., 7 folding plates, one map. [VOL 4: 1752] 4°: 692, [8] p., 3 folding plates, one map.

VERY SCARCE. In 1733 he was recruited as part of the scientific corps to accompany a trans-Siberian expedition. He proceeded as far as Yakutsk observing the natural history of Siberia. Several maps are included in his report including this description of the Arctic coast. Gmelin compiled in his four-volume *Reise durch Sibirien*, written after his return to Tübingen in 1747. This was the most comprehensive botanical, zoological, geological, topographical, and ethnographic survey of Siberia published up to that time. Gmelin ignored the Academy of Sciences' prohibition against publishing anything about the expedition without special permission, apparently feeling that he could write whatever he pleased since he was back on German soil. His critical comments about the Chancellery's role in the Kamchatka expedition and his graphic descriptions of some of the seamy sides of Siberian

life were shocking and embarrassing to the Russian government. Describes an extensive trip through Siberia, including observations on natural history and mining.

"One of the earliest accounts of Bering's voyage to the Northwest mainland" - Howes. Gmelin was the botanist attached to Vitus Bering's second expedition. He went to eastern Siberia in 1733 as part of the imperial Russian scientific expedition which included Gerhard Müller and astronomer Louis DeLisle. Their original intention was to sail with Bering on his voyage of northeast discovery, but in the event they did not accompany him, working instead in eastern Siberia and along the Lena River. The publications of the scientists attached to the expedition, including Gmelin's travel narrative, constitute much of the earliest material on the discovery and exploration of the Bering Strait and Alaska (see Lada-Mocarski 4-7, 9). Their collective enterprises were the first scientific investigation of the Russian Far East. Gmelin's work is one of the key scientific contributions to the Russian explorations of the 1730s. "Although this work does not contain any material by Gmelin on Alaska proper, it is replete with information on the preparations for Bering's final sea voyage. Altogether, it is indispensable original source material for the study of Bering's second expedition" - Lada-Mocarski. Gmelin also compiled the first comprehensive flora of Siberia, Kamchatka, and the northeastern corner of Asia. After almost a decade in Siberia and the Far East, Gmelin returned to publish his findings, including 1178 species of plants.

GMELIN, Samuel Gottlieb. (BORN: Tübingen, Germany, 23 June 1743; DIED: Darbent, Russia, 27 July 1774) *German naturalist*.

German naturalist and traveller in Russia, nephew of J.G. Gmelin

Samuel Gottlieb (1743-1774), the son of Johann Conrad, was appointed professor of natural history at St Petersburg in 1766, and in the following year started on a journey through south Russia and the regions round the Caspian Sea. On his way back he was captured by Usmei Khan, of the Kaitak tribe, and died from the ill-treatment he suffered, on the 27th of July 1774.

Gmelin was born at Tuebingen in a well known family of naturalists. His father was Johann Conrad Gmelin, an apothecary and surgeon. His uncle was Johann Georg Gmelin. Samuel earned his medical degree in 1763 from the University of Leiden at the young age of 18 (Silva et al., 1996). While living in Holland, Gmelin developed a keen interest in marine algae. In 1766 he was appointed professor of botany at St Petersburg. In the following year he was sent on an expedition to study the natural history of the Russian Empire. He explored the rivers Don and Volga, and the western and eastern coasts of the Caspian Sea. Whilst travelling in the Caucasus he was taken hostage by Usmei Khan of Kha kes and died because of ill treatment in captivity in Derbent. He was only 29 years of age.

Gmelin was the author of *Historia Fucorum* (1768), the first work dedicated to marine biology, dealing exclusively with algae and the first using the binomial system of nomenclature. It includes elaborate illustrations of seaweed and marine algae on folded leaves. However, algal specimens used by Gmelin in the *Historia fucorum* are thought to no longer exist (Dixon & Irvine, 1970). The results of his travels were published in *Reise durch Russland zur tersuchung der drey natur-reiche* (Trip through Russia to study the three natural provinces) (1770-1784, 4 vols.). The final volume was edited by Peter Simon Pallas.

Stadt ... 1769-1770. Theil 3 : Reise durch das nordliche Persien 1770-1772. Theil 4 : Reise von Astrachan nach Zarizyn ... 1772-1774. Nebst dem Leben des Verfassers.

VERY SCARCE. Trip through Russia to study the three natural provinces published in 4 volumes.

Fourth volume edited by Peter Simon Pallas [1741-1811].

A fourth volume was posthumously published by P. S. Pallas in 1784. This work is a narrative of Gmelin's expedition undertaken by command of the Empress Catherine II 1768?1772. The first volume describes the journey from St. Petersburg to the Don area in 1768?9, while the second deals with the journey to and the stay in Astrakhan in 1769?70. In 1770?2 Gmelin travelled in Northern Persia and was the first naturalist to explore part of this country. Volume three contains some of the results from these regions.

Ueber | Einschlüsse Im Diamant, | Von | Dr. H.R. Goeppert. | [rule] | Eine Im Jahre 1863 Von Der Holländischen Gesellschaft Der | Wissenschaften Zu Haarlem, | Mit Der Goldenen Medaille Gekrönte Preisschrift. | [rule] | Haarlem, | Die Erben Loosjes, | 1864.

8°: [I]-V, [6]-84 p., 7 plates (lithographic; showing diamond crystals and inclusions). PAGE SIZE: 294 x 222 mm.

SCARCE. This well researched paper describing various inclusions found in the mineral diamond won a gold medal from the Dutch Society of Science in Haarlem. Goeppert describes and analysis's various diamond inclusions, which to him resemble organic remains, and also gives an account of occurrences of diamond, which at the time were mostly alluvial. In this time prior to the discoveries of the great diamond fields of South Africa, the author puts forth a very convincing case that the carbon inclusions in diamond are organic in nature and that diamonds were created through some type of sedimentary process. However, shortly after this volume appeared the kimberlite pipe of the Dark Continent were found and the true igneous origin of diamond established once and for all time.

GOLDSCHMIDT, Victor. (BORN: Mainz, Germany, 10 February 1853; DIED: Salzburg, Austria, 8 May 1933) *German mineralogist & crystallographer.*

Goldschmidt began as a student of metallurgy at the Industrial Academy in Berlin and the Freiberg Bergakademie, but in 1880, he graduated with a Ph.D. in mineralogy from the University of Heidelberg. In 1888, he

married Leontine Porges, who supported her husband and his students. In 1888, Goldschmidt also became a faculty member of the University of Heidelberg. There he founded the Mineralogical-Crystallographic Institute.

VERY SCARCE. A remarkable crystallographic work that attempted to index every mineral crystal form. In volume one, the first 156 pages are devoted to a treatise on crystallography that was also separately published as *Einleitung in die formbeschreibende Krystallographie* (Berlin, 1887) [which see next entry]. This introductory section covers symbols, projections, transformations, calculation of elements, tables, and abbreviations. Next follows the systematic data for minerals arranged alphabetically from abichite to euxenite. For each mineral listed the crystal system, axial ratios, cell elements, etc. are given. The next two volumes continue these listings for the other minerals. At the conclusion of volume three is a supplement listing synonyms and corrections. The work was issued in a series of sections. Volume one appeared in two Lieferungen 1. *Einleitung* & 2. *Abichit to Euxenit*. Volume two was published in seven Hefts covering the minerals *Fahlerz* to *Pyroxen*. The concluding volume also appeared in 7 Hefts, with the first 6 dealing with the minerals *Quarz* to *Zunyt*. The last Heft was a supplement.

VERY RARE. This rare set is an exceptional and unique work in crystallography. It was a by-product of Goldschmidt's extraordinary compilation *Index der Krystallformen der Mineralien* (3 vols., Berlin, 1886-91), which listed the known crystal forms for many minerals. The *Krystallographische Projectionsbilder* uses the forms of some of the minerals listed in the earlier work and plots them in goniometric projection. Because the minerals Goldschmidt choose to publish in this fashion had tremendous variety in their crystal forms, the only practical method of conveying the rich variety of forms on one projection was to use a very large format in the publication of the atlas, and it is. Measuring 78 x 68 cm, or over 2.5 x 2 feet, the plates of this work display the culmination of goniometric projection. In the time preceding x-ray diffraction, the only method available to describe the exact symmetry of crystallographic data was to measure crystal faces on a goniometer. The measurements obtained were then conveyed to other researchers in a number of ways the most computational of which was the goniometric projection. This procedure involved projecting an imaginary axis orthogonal from a measured crystal face to the surface of a hemisphere lying outside the crystal. Where the axis projection intersected the sphere an imaginary point was created on the surface of the sphere. These points were then plotted on to a special graph known as a Wulff net. By this means a simplified visual picture of the crystal symmetry and form is produced. In addition, if other crystal forms of the

GOLDSCHMIDT

same mineral are projected on to the same circle, a very visual, simplified picture of all the species crystal forms is created. This allowed any research who thought they had discovered a new crystal form to check its projection against Goldschmidt's work and quickly determine if in fact a new form had been discovered.

VERY SCARCE. *Krystallographische Winkeltabellen* presented for the first time a complete table of angles for all the crystal forms of all crystallized mineral species. Such tables were useful to the crystallographer to determine without calculation whether the forms observed on a crystal were already known or were new. Short approximations to these tables had appeared within monographs for single mineral species, but no one before this work had attempted the mineral kingdom as a whole. It had been impractical because the prevailing method was to list the interfa-

KRYSTALLOGRAPHISCHE WINKELTABELLEN, 1897

cial measurements between crystal faces which for any given form required an enormous number of angles to be given. However, the invention of the two-circle goniometer first proposed by Evgraf S. Fyodorov [q.v.] and constructed by the mechanic Peter Stoë [?-1931] for Goldschmidt allowed each face of a crystal to be measured independently of all others. The crystal's position was determined with reference to a fixed pole and meridian by two angular coordinates making it possible to create a complete table of angles. For such a table now need only contain for each form two angular values, r and f (corresponding to geographical longitude and latitude for a point on the earth's surface). *Krystallographische Winkeltabellen* contain these values for each well established crystal form of each mineral calculated from the axial elements of the substance and the symbol of the form. There are also given for each form several angles that facilitate the comparison of these angular coordinates with the results of the ordinary interfacial measurement. Lastly a set of linear coordinates enable the rapid plotting of the form in a gnomonic projection. The introduction to the work gives the necessary explanations of the values contained in the work, and the schemes employed in each system for the calculation of the values are shown. Some idea of the enormous labor employed by Goldschmidt in this work is given by the statement that it contain upwards of 70,000 values. Of this number about half are values recurring more or less often, such as angles of 45° and 60°, but of the remaining each required a separate calculation. An appendix

contains notes on the various minerals, indicating the particular orientation adopted in each case.

8°: π^3 1-8⁸ 9⁵; 72 ℓ .; [i]-iv, [1] contents, [1] blank, [1]-136, [2] p., one folding musical sheet as an extension of the leaf containing pages 53 & 54. PAGE SIZE: 252 x 174 mm.

CONTENTS: [i-ii], Title page, verso two quotes (one from Goethe, the other from Pythagoras).; [iii]-iv, "Vorwort.;" [1 pg], "Inhalt."—signed V. Goldschmidt, December 1901.; [1 pg], Blank.; [1]-136, Text.; [2 pgs], Publisher advertisements for the author's other works published by Julius Springer in Berlin.

VERY SCARCE. In this strange theoretical crystallography, Goldschmidt attempts to relate musical harmony with the symmetry of crystals and the preception of color. As a counterpoint he then discusses complications found in nature, art and counting systems. Goldschmidt wrote in the preface that the essentials of this book had been written down by 1893, but in an effort to make this complex thesis

more complete, he had continued to add new material until publication.

RARE. The encyclopedia of crystal morphology, whose purpose was to collect, index and reproduce in one work all the crystal forms observed for every mineral species. In 1913, a *Prospectus* for this work consisting of 8 pages of text and 8 plates was given a lengthy notice in the *American Journal of Science* [See: *4th Series*, **35**, 553]. After reminding the readers that a previous attempt by ALBRECHT SCHRAUF to publish such an atlas had collapsed after only a single volume

had appeared, the review goes on: "... the work will embrace from 25,000 to 28,000 figures; these will be included in five or six volumes of about 250 plates each, with a like number of volumes of text." One wonders if the readers of this notice actually expected to see Goldschmidt's *Atlas* to be completed. Most probably did not realize this was the keystone to the author's crystallographic work. With the *Index der Krystallformen der Mineralien* (3 vols., Berlin, 1886-91) and *Kristallographische Winkeltabellen* (Berlin, 1897), it forms the last segment of a trilogy Goldschmidt had intended to publish from the start of his career, and which incidentally defined modern crystal morphological studies. In the preface to the text, Goldschmidt explains the broad standpoint that has led him to develop this work. His desire was to bring together the material necessary for solving many of the problems of crystals and their growth, particularly with respect to habit, the frequency of occurrence of certain forms and the relative size of the faces. The tremendous depth of the work is astonishing, with most mineral species represented by several hundred to a few thousand crystal drawings. The reproduction of these figures is excellent as well. Goldschmidt did not attempt to redraw each of these figures as Schrauf had done. Instead original figures were reproduced by the printer using photographic techniques onto the zinc plates used for printing. This enabled Goldschmidt to size, adjust and rotate the original drawings as needed. The text is arranged alphabetically by mineral name, and consists of two parts. The first and most important of these are the plates, for they create the esthetic value of the work. Reproductions of many thousands of crystal drawings illustrate graphically all the variations in form observed for every mineral. Supporting these figures is the text, which lists the various characteristics of the minerals, and gives a detailed accounting of the locality and exact reference sources for each figure pictured.

Special Publication No. 2 | The Academy of
Natural Sciences of Philadelphia | Crystallographic
| Tables | For The | Determination Of Minerals
| By | Victor Goldschmidt (Heidelberg) | and
| Samuel G. Gordon (Philadelphia) | [rule] |
Philadelphia | 1928.

8°: 70 p., tables, diagrams.

VERY SCARCE. Co-authored with SAMUEL G. GORDON, this book was published as the Academy of Natural Sciences of Philadelphia's special publication number 2. It lists in tables the minerals whose crystal system and axial elements were known at the time of publication. The polar elements are arranged in a regular series such that having measured the angles of a crystal it was possible to quickly locate its place in the table. Allowances were made for the possible variations in orientation. In addition to the crystallographic

data a brief statement concerning the physical and chemical properties of each species is given to aid in its identification.

FESTSCHRIFT, 1928

1942. — German, 1928.

[Contained within a double rule box:] Festschrift | [tapered rule] | Victor Goldschmidt | Zum 75. Geburtstag | (10. Februar 1928) | Von Seinen Freunden Und | Schülern Gewidmet | Herausgegeben Von Der Eduard-Und-Josefine-Von-Portheim-Stiftung Für Wissenschaft Und | Kunst In Heidelberg Unter Schriftleitung Von | Dr. Hans Himmel / Assistant Am Mineralogisch-Krystallographischen Institut | Der Stiftung | [ornament] | Heidelberg 1928 | Carl Winters Universitätsbuchhandlung.

8°: π^2 1-178 183; 141*l.*; [i]-iv, [1]-275, [3] p., frontispiece (portrait of Goldschmidt), 10 plates (one folding), text illus., biblio. of Goldschmidt's writings to 1928. PAGE SIZE: 245 x 174 mm.

CONTENTS: [Facing the title page is a frontispiece portrait of Goldschmidt.]; [i-ii], Title page, verso blank.; [iii]-iv, "Inhalt."; [1]-275, Text.; [1 pg], "Nachwort."—signed Hans Himmel.; [1 pg], "Tafeln."; [1 pg], "Erklärung Zu Tafel I."; [At end], 10 plates, numbered I to X (Plate X folding).

VERY SCARCE. Edited by Hans Himmel [1897-?]. This handsome work was published to commemorate the anniversary of Goldschmidt's birth. It begins with a somewhat overglowing review of Goldschmidt's life and contributions by L. Milch. Next comes a chronological listing compiled by Himmel of Goldschmidt's 177 publications printed from 1876 to 1925. Following this are 32 papers published in the native languages of the authors on various mineralogical and crystallographic subjects. The tremendous influence Goldschmidt had as a teacher is somewhat indicated by the five languages reproduced in the papers. Each of the authors was either a former student of Goldschmidt's or a professional colleague, many making their own important contributions to these sciences.

VERY SCARCE. Edited and published posthumously from a nearly complete manuscript by Hans Himmel [1897-?] and Karl Müller [?-?]. Goldschmidt's last work is designed as a an authoritative textbook of crystal measurement using one and two circle goniometers. Coming from one of the great practitioners of the art, it is perhaps the finest monograph on the subject. The work gives instruction by the same methods Goldschmidt had applied in teaching forty years worth of post graduate students in his laboratory. It is divided into two sections. The first, the introduction, describes methods of generating gnomonic, stereographic and orthoscopic projections of crystals. The second covers the measurement of crystals on one and two circle goniometers. By using examples of increasingly complex crystal forms, the theories discussed in the text are reinforced by application. It concludes with examples of measuring twinned crystals. Within the discussion are references to crystal models, crystal making apparatus, and goniometers. The numerous

GOLITSYN

text illustrations show figures of the apparatus, crystal figures and various projections.

GOLITSYN (Gallitzin), Dmitrii Alekseyevich. (BORN: Russia, 21 December 1763 and later in 1773 at the Hague. He retired to Braunschweig. Golitsyn was a member of many different learned societies and author of a number of scientific publications, especially in the field of mineralogy. He bequeathed his mineral collection (30,000 specimens) and library to the JENA MINERALOGICAL SOCIETY, which was subsequently disbanded. The collection has since been dispersed into the general collection of the University of Jena.

Golitsyn (French: Gallitzin) was appointed Russian ambassador at Paris in 1763 and later in 1773 at the Hague. He retired to Braunschweig. Golitsyn was a member of many different learned societies and author of a number of scientific publications, especially in the field of mineralogy. He bequeathed his mineral collection (30,000 specimens) and library to the JENA MINERALOGICAL SOCIETY, which was subsequently disbanded. The collection has since been dispersed into the general collection of the University of Jena.

CONTENTS: [2 pgs], Title page, verso blank.; [2 pgs], "Errata."; [1]-233, Text.; [234], Blank.; [235]-244, "Arrangement Méthodique | Des Minéraux."

VERY SCARCE. In this methodical arrangement of mineralogy, the minerals are arranged into a natural history structure based on Orders, Classes, Families and Species. In the introduction, the author notes the great prevalence of quartz around the globe. It is found in every environment from mountain tops to the sands of the oceans. He then concludes that it would be appropriate to create a systematic classification of minerals based on the relative proportions of various materials found within the earth. Thus, the most common material, quartz, will head the system, with other substances found in lesser amounts listed below. Here Golitsyn utilizes the eight Orders of (1) Quartz, (2) Native metals, (3) Calcium minerals, including gypsum, calcite, marble, stalactites, etc., (4) Products of vegetables and animals, (5) Acids, (6) Mixtures, including zeolites, lapis-lazuli, fluorite, concretions, etc., (7) Combinations of metals and semi-metals, including pyrite, argentite, cuprite, oxides of lead, copper, bismuth, nickel, manganese, and (8) Products of volcanoes. Synonyms to mineral names are provided, and footnotes cite authorities for text comments.

4°: *4 A-Qq⁴ Rr⁵; 165ℓ.; [i]-viii, [1]-320, [2] p. PAGE SIZE: 194 x 162 mm.

RARE. A large, comprehensive mineralogical dictionary, that is encyclopedic in nature. Its rarity may be a result of a stopped production, with the appearance of HAÜY's *Traité de Minéralogie* and its reform of nomenclature being the cause. It is clear from the entries that Golitsyn was a proficient mineralogist with a keen instinct for including the best information. The species and varieties are named in French, with synonyms in German and other common names, then under each entry details on identification and physical properties, citing other authorities.

VERY SCARCE. An alphabetical classification of minerals, metals, earths, stones with their different descriptions, accompanied by extensive descriptions and references to the literature on the subject. The appearance of HAÜY's *Traité de Minéralogie* (1st ed., Paris, 1801), in which he revised the nomenclature of mineralogy, caused Golitsyn to publish this corrected and enlarged second edition. The introduction discusses the principles of RENÉ JUST HAÜY's mineralogical nomenclature. The text then presents an alphabetical list of mineralogical terms that provides alternate names from other authors and a short descriptive commentary of the subject. Histories of some mineral species are also provided. At the conclusion of the alphabetical list is a table of lithology that compares the relative composition of earths, silica, alumina, calce, magnesium, baryte, strontian and zirkonium. A key at the

RECUEIL DE NOMS, 1802

end provides some early chemical formulas of rocks and a few pages of conclusions.

Woodcut headpiece, ornamental initials, chapter
ornaments. PAGE SIZE: 136 x 74 mm.

RARE. Basically this is a treatise on gems and
other precious stones, compiled from many ancient
and contemporary sources, with little or no originality
on Gonnelli's part. The first portion of the text is
divided into three parts describing: (1) the nature of
the lapidifying juice, (2) how gemstones derive their
color, and (3) the rôle of water in mineral formation.
Afterwards is an alphabetical glossary containing
descriptions of many gemstones. A somewhat lengthy
bibliography of cited authorities occurs on pages 225 to
234. Appended at the end are the regulations of the
library of the convent of the Blessed Mary de Monte
Carmelo at Venafro.

DESCRIPTION OF A PORTABLE CHEST, 1791

1960. — German, 1790.

Voll-ständiges chemisches Probiercabinet zum Handgebrauche für Scheidekünstler, Aerzte, Mineralogen, Metallurgen, Technologen, Fabrikanten, Oekonomen und Naturliebhaber, entworfen von J.F.A. Göttling ... Erster Theil, Untersuchungen auf dem nassen Wege. Jena: J.M. Mauke, 1790.

8°: 215 p.

RARE. The work describes a portable laboratory designed by Göttling. It was intended for use not only by analytical chemists, natural philosophers, mineralogists, and metallurgists, but also by doctors, technologists, and manufactures. The equipment consisted of thirty-five chemicals, together with small scales and weights, a blow-pipe, and some glass apparatus, housed in two boxes approximately 12 x 9 x 9 inches.

Göttling includes in this work descriptions of over a hundred and fifty reactions that can be preformed with the materials provided. These were all reactions in solution; the author planned to write a second book describing reactions in the dry way, but this was apparently not achieved.

CONTENTS: [2 pgs], Title page, verso blank.; Folios
A1r-???, Text.

VERY RARE. Apparently, this is an auction
sale catalog listing the contents of Gottwald's cabinet.
The collection consisted principally of natural history
objects, but also held a considerable number of artificial
objects, antiquities and works of art. The collection *en
bloc* was purchased by Peter the Great and transported
to St. Petersburg for incorporation into the Royal
Museum.

VERY SCARCE. Published in 1903, the *Vade Mecum Guide* is an excellent pocket book explaining mineralogy and mineral collecting. This work was written by Gratacap in close association with the ARTHUR CHAMBERLAIN, then editor of the periodical *The Mineral Collector*. This is indicated by the use in Gratacap's work of photographic illustrations that are common between issues of *The Mineral Collector* and *Vade Mecum Guide*. In addition, the same publisher produced both works.

SCARCE. An enlarged and revised edition of *Vade
Mecum of Minerals* (New York, 1903). The text is
intended chiefly for the use of visitors to public cabinets
and collections of minerals, but is so arranged that
it forms an adequate text for elementary teaching
in mineralogy as well. The book contains a section
on crystallography, followed by a discussion of the
physical and chemical properties of minerals. The
section devoted to the description of mineral species
— in harmony with the purpose of the book — has
been entitled "Guide to the Collections." An extensive

history of the development of mineralogy follows and
the book closes with a description of the fine Bement
mineral collection which belongs to the American
Museum of Natural History in New York City and of
which the author of the book is curator. There are text
illustrations, 74 photograph plates and a map showing
the distribution of minerals in the United States.

GRAVES

8°: [1]-184 p.

RARE. Descriptive catalog of Grauel's mineral collection published some years after his death. The text describes the earths, stones, including precious and semi-precious types, a few native metals, and petrifications contained in the cabinet. The classification followed in the text is derived from that first proposed by Wallerius, as are the basic descriptions of the specimens. Schröter considers these descriptions to be very exact and this work to be a valuable reference.

GRAVENHORST

GRAVENHORST, Johann Ludwig Carl. (BORN: Braunschweig, Germany, 14 November 1777; DIED: Breslau, Germany, 14 January 1857) *German entomologist & zoologist.*

Early on Gravenhorst developed an interest in insects. He attended the University of Helmstädt and the death of his father in 1799 left him a fortune that allowed him to pursue his interests. In 1810 he settled in Frankfurt an der Oder where he taught at the town's university. Later, he transferred to the University of Breslau. In 1825 he began to develop a mental disorder that progressed throughout his life.

GREG, Robert Philips. (BORN: Manchester, England, 23 March 1826; DIED: 1906) *English merchant, economist, antiquary & mineralogist.*

Son of Robert Hyde Greg, who had purchased the mineral collection formed by THOMAS ALLAN and his son ROBERT in 1833. The father himself did nothing to add to the collection, but Robert for the period 1850 to 1859 actively enriched the cabinet through purchases and exchanges. This collection then formed the cornerstone of research for his important *Manual of Mineralogy* (London, 1858). In 1860, the Allan-Greg collection as it was known was sold en bloc to the British Museum.

SCARCE. Co-authored with William Garrow Lettsom [see note below]. Great Britain for its small geographic size is especially rich in ores and other minerals, and hence a treatise on British mineralogy has an interest far beyond that of most local works. The number of species described in this volume is about 240. The authors have elaborated the subject

MANUAL OF THE MINERALOGY, 1858

with care, both as to crystalline forms, and localities, and have introduced much information of economical interest. Greg had at the time had one of the best private collections of minerals in Great Britain; besides which, the authors had access to various other cabinets. The chemical portions of the work were revised and corrected by the mineralogist MATTHEW FORSTER HEDDLE of Edinburgh. At the end is a description of British pseudomorphs and a list of the mines in Devon and Cornwall.

Spencer, F.R.S. | and | a Fourth Supplementary List | (1977) together with a foreword | by | Peter G. Embrey | [rule] | Lapidary Publications | Broadstairs • Kent • England. 8°: [i]-xvi, [1]-483, [1] p., illus., index.

Facsimile reprint of the 1858 edition, together with an historical foreword by Peter G. Embrey [see note below] and supplementary lists of British Minerals bringing the description of British minerals upto the year 1977.

Peter Godwin Embrey. (BORN: 1929; DIED:) *English mineralogist.* Embrey was educated at Oundle School and took his degrees in chemistry and mineralogy at Oxford University. He was a demonstrator and junior lecturer at Oxford before joining the British Museum (Natural History) of which he eventually became a Principal Scientific Officer in the Department of Mineralogy. He also was curator of the national mineral collection from 1956 until his retirement in 1989. He co-authored several mineralogical works, including *Minerals of Cornwall and Devon* (London & Tucson, 1987) and *A Manual of New Mineral Names, 1892–1978* (London, 1980).

William Garrow Lettsom. (BORN: 1805; DIED: 14

December 1887) *English diplomat & amateur mineralogist.* Prior to 1858 and before going to Mexico, Lettsom sold his mineral collection to William Nevill. Eventually, this collection was incorporated into HENRY LUDLAM's accumulation, which was ultimately acquired by the Institute of Geological Sciences, London.

See: Arbolayre (or Grant Herbie).

GREW

GREW, Nehemiah. (BORN: Mancetter, Warwickshire, England, 1641; DIED: London?, England, 25 March 1712) *English physician.*

Grew was the son of a clergyman and schoolmaster. After an early education at Coventry, he received his B.A. from Cambridge in 1661. He then received his M.D. from the University of Leiden, and returned to England, opening a medical practice first in Coventry then in 1672 in London. Because of Grew's interest in plant anatomy, he was elected a fellow of the Royal Society, where he came in contact with many notable scientists, including Robert Hooke. Through Hooke, Grew was introduced to techniques of microscopic examination, which he used in throughout his scientific researches. Today, Grew is principally remembered for his outstanding contributions to plant anatomy, which were collected together and published in his *The Anatomy of Plants* (London, 1682).

PLATES: Frontispiece shows an engraved portrait of the head and shoulders within an oval frame sitting on a pedestal. Text at the bottom of the plate reads: "Daniel Colwal Armiger Musai Regalis Societatis Fundator." Tab 1, 5 figs. of skulls and an armadillo. Tab 2, 6 figs. horns, bones and rhinoceros hide. Tab 3, 4 figs. Tortoise shells. Tab 4, 2 figs. skeleton of crocodile and elephant tusk (folding). Tab 5, 3 figs. storks bills. Tab 6, 4 figs. head of albatros, eggs and bird's nest. Tab 7, 5 figs. fish. Tab 8, 5 figs. of fish and starfish. Tab 9, 8 figs. of shells. Tab 10, 9 figs. of shells. Tab 11, 10 figs. of shells. Tab 12, 9 figs. of shells. Tab 13, 13 figs. mostly of beetles. Tab 14, 8 figs. of seed pods. Tab 15, 5 figs. of seed pods and nut shells. Tab 16, 11 figs. of nut shells. Tab 17, 3 figs. of gourds and an acorn with leaves. Tab 18, 6 figs. of sponges. Tab 19, 7 figs. of teeth. Tab 20, 11 figs. of various stones. Tab 21, 7 figs. of marcasite and gypsum crystals. Tab 22, 6 figs. of copper and iron ores. Tab 23, 4 figs. of stomachs of weasels, cat and fox. Tab 24, 4 figs. of stomachs. Tab 25, 1 fig. of stomach. Tab 26, 3 figs. of stomachs. Tab 27, 2 figs. of stomachs. Tab 28, 2 figs. of stomachs. Tab 29, 4 figs. of stomachs. Tab 30, 6 figs. of stomachs. Tab 31, 2 figs. of stomachs.

SCARCE. Early collection catalog of the Royal Society of London's natural history specimens. This book contains relevant early botanical and natural history observations, and many of the plates depict minerals, crystals, shells, fishes, birds, insects and animal fossils. Many of the specimens, particularly the plants, were American in origin, especially from the West Indies. In fact, the first 386 pages comprise a detailed catalogue of the natural history specimens owned by the Royal Society and then housed at Gresham College. Grew divides this portion of the work into four parts: (1) animals, including human rarities, quadrupeds, serpents, birds, fishes, shells and insects, (2) plants, including trees, shrubs, herbs, mosses, mushrooms, and plants of the sea, (3) minerals, with descriptions of stones, including bezoar, corals, fossils, gems, metals, salt, amber and other sulfurs, and (4) artificial matters, including things related to chemistry and natural philosophy, mechanics, coins, and medicines. Appended at the end is another treatise on the comparative anatomy of stomachs and guts which is an early classic in the field. Some of the plates show specimens relevant to this section.

A frontispiece engraving of Daniel Colwall (who, as mentioned, financially supported the establishment of the museum) and 31 engraved plates (also paid for by Colwall) comprise the illustrations. Of these, 18 show plant and animal specimens; included are various skulls and skeletons, tortoise shells, a rattlesnake's rattle, preserved fish, birds' nests, shells, starfish, insects, nuts, sponges, and a specimen identified as "skin on ye Buttock of a Rhinoceros." Plates 19 and 20 show fossils (and two small chistolite sections); plates 21 and 22 show mineral specimens (including calcite, quartz, gypsum, silver, copper, hematite, and what appears to be cerussite or pyromorphite); and plates 23 through 31 show stomachs and intestines.

The text is divided into four major parts: (I) Animals, (II) Plants, (III) Minerals, and (IV) Artificial

Matters. All sorts of highly curious objects are represented: An Egyptian mummy given by Prince Henry, Duke of Norfolk; a human fetus; the "Throttle Bone of a male Aquiqui" monkey; tiger claws; a stuffed "Pigheaded Armadillo", the "Horns of a Hare" ("So I find them inscribed," says the author, "Although it is probable that they are the homes of a small kind of German Deer"); a 7/2 foot crocodile (stuffed); the leg of a dodo; more than 30 lodestones; a porpoise skeleton; butterflies; coins; and a wide array of scientific and mechanical instruments and devices. There is an index of medicines, and a list of donors.

The catalog gives a good view of the extent of mineralogical knowledge in England three centuries ago. Grew made a crude effort at categorizing the fossil and mineral specimens, firstly into three broad divisions: (1) Stones (fossils, gems, "stones regular," and "stones irregular"), (2) Metals (gold, silver, copper, tin, lead, iron, antimony, mercury, etc.), and (3) "Mineral Principles" (salts, "sulphurs" and "earths"). In the first division, he attempted to distinguish gems by their colors, "stones regular" by the external shapes, and "stones irregular" by their hardness. These distinctions served him poorly and resulted in an irrational jumble, but inasmuch as the proper tools did not yet exist for structuring a rational crystallochemical classification, he can hardly be criticized for his approach.

He then gives a brief description of each specimen. Although he had available very little established descriptive terminology, he plunged ahead, coining his own terms where necessary and drawing frequently on the pre-existing reference works. Grew's citations show that he was well-versed in the early mineralogical literature, such as it was. He refers regularly to Agricola, and also Johannes Kentmann (1565). Pliny, Tavernier, Gesner, de Boodt, de Laet, Robert Boyle and Kircher are all cited.

GRIFFIN, John Joseph. (BORN: London, England, 22 January 1802; DIED: London, England, 9 June 1877) *English chemist, author & publisher.*

Griffin received an early education in chemistry in Paris and Heidelberg. His family determined that he would enter business, and therefore, Griffin was apprenticed as a bookseller to the firm of Tegg & Co. After his 1832 marriage, he opened with his eldest brother an establishment in Glasgow. From these premises, Griffin became a successful bookseller, publisher and a dealer in chemical apparatus. In 1852, the partnership was disjoined. The publishing branch was continued by Griffin's nephew as Charles Griffin & Co. and the firm of chemical apparatus dealers was moved to London and became J.J. Griffin & Sons. Griffin's interest in chemistry caused him to translate Heinrich Rose's *Handbuch der analytischen Chemie* (??,??). He also assisted in the foundation of the Chemical Society in 1840. Throughout his life, Griffin always attempted to popularize chemistry.

PRACTICAL TREATISE, 1827

of simple minerals, adapted to | aid the student in his progress in mineralogy, | by facilitating the discovery of | the names of species. | [rule] | By John Griffin, | Author Of Chemical Recreations. | [rule] | Glasgow: | Published By Richard Griffin & Co., | And Thomas Tegg, London. | [rule] | 1827.

12° in 6s: π^3 b⁴ c² A-Z⁶ 2A⁶ 2B⁴ 2C⁶; 163ℓ.; [2], [i]-xvi, [1]-308 p., extra engraved title page, 5 plates. PAGE SIZE: 148 x 90 mm.

CONTENTS: [2 pgs], Engraved title page, verso blank.; [i-ii], Title page, verso "Malcolm & Griffin, Printers, Glasgow."; [iii]-xii, "Introduction."—dated 1 September 1827.; [xiii]-xvi, "Table of Contents."; [1]-288, Text.; [289]-299, General index.; 299-307, Mineral index.; 307-308, Index to the figures on the plates.

RARE. This work is the first independent work on the application of the blowpipe in English, and the first published work by its author. Its purpose was to first be a manual of instruction on the manipulation of the blowpipe and second to be an introduction to the determination of mineral species. The introduction gives a philosophical overview of mineralogical classification that is applied in the third part of the work. The text divided into four parts then begins. Covering pages 1 to 91, the first section is a practical treatise on the blowpipe. It begins with an history of the blowpipe. Following this are descriptions of the various types of instrumments, the flames employed for reactions, exterraneous apparatus used with the blowpipe, and the operations performed

with the blowpipe, and various views of the reactions of minerals before the flame. Part two describes in summary on pages 92 to 142, the reactions of various elements that commonly make up minerals and their behavior before the blowpipe. Part three (pages 143 to 268) gives a systematic arrangement of simple minerals. The fourth section covering miscellanea describes the use of other types of blowpipes in actually determining the composition of a mineral. Included are Lavoisier's, Hare's, Clarke's, Gurney's, Toft's and Phillips' "Spirit Lamp." Two comprehensive indexes close the book.

SYSTEM OF CRYSTALLOGRAPHY, 1841

1889. — English, 1841.

A | System Of Crystallography, | With Its | Application | To | Mineralogy. | By | John Joseph Griffin, | Translator of "Rose's Manual Of Analytical Chemistry." | Author of "Chemical Recreations." | [rule] | Glasgow: | Published By Richard Griffin And Company. | And Thomas Tegg, London. | [rule] | MDCCCXLI.

8° in 4s: π^4 b-c⁴ d³ B-Z⁴ 2A-2X⁴ 2Y² a-s⁴ χ^2 ; 263ℓ.; [i]-xxvii, [3], [1]-346, [2], [1]-143, [1] blank, [4] p., text figures, adverts. PAGE SIZE: 222 x 135 mm.

CONTENTS: [i-ii], Title page, verso blank.; [iii-vi], "Contents."; [vii]-xxvii, "Preface."—dated 2 November 1840.; [1 pg], Blank.; [1 pg], "Part I. | [rule] | Principles Of

Crystallography."; [1 pg], Blank.; [1]-336, Text.; [337]-346, "Table Of Sines And Tangents."; [1 pg], "Part II. | [rule] | Application Of Crystallography | To | Mineralogy."; [1 pg], Blank.; [1]-137, Text.; [138], Blank.; [139]-143, "Index."; [1 pg], Blank.; [4 pgs], Advertisements.

SCARCE. A comprehensive treatise on crystallography, claiming to be the first to easily classify minerals. After discussing the difficulties of other texts, Griffin introduces his own system. The first part is theoretical. It describes the principals of crystallography including axes of crystals, prisims and pyramids and their combinations, classification of crystals, a new system of crystallographic notation, cleavage, primitive forms, simple forms and combinations, a theory of crystallization, application of trigonometry to crystallography, and logarithmic tables. The second part treats the applications of crystallography to mineralogy. A tabular arrangement of minerals according to Gustav Rose's [q.v.] method of six systems of axes of crystallization is presented. This is followed by a catalog of crystallized minerals, showing the crystallographic combinations that occur in nature, and a systematic arrangement of crystals, with a list of the minerals common to each crystal form. A descriptive catalog of crystal models sold by the publishers is included at the end. An index to the minerals described ends the work.

GRILL, Adolph Ulrik. (BORN: Stockholm, Sweden, 19 March 1752; DIED: Stockholm, Sweden, 1 October 1797) *Swedish naturalist*.

Grill studied natural history subjects at the University of Söderfors. He possessed a large cabinet of natural history objects including about a hundred mammals, sixty birds, thirty fishes and lots of corals and petrifications. After having been offered for sale abroad, these collections were donated in 1828 to the Vetenskapsakademien in Stockholm. Grill was a member of the Swedish Musical and Scientific societies.

STEINAFRÆÐI, 1878

RARE. A mineralogical work written in Icelandic (Steindafræði=mineralogy). Various aspects of mineralogy including crystallography, and physical and chemical properties, together with a short descriptive section are treated on pages 1-94. A description of the most common rocks, almost all volcanic, occurs on pages 95-121. The work is illustrated with 32 illustrations, contained mostly on the two accompanying plates. This appears to be the first mineralogical text book for Icelandic students cast in a modern structure.

GRONOV, Johannes Fredericus. (BORN: Leiden, The Netherlands, 10 February (Baptized) 1686; DIED: Leiden, The Netherlands, 10 July 1762) *Dutch physician & naturalist.*

Father of LAURENTIUS THEODORUS. In 1725, Gronovius opened a medical practice in Leiden. He was often a Councillor, Alderman and Borgomaster of Leiden. A large natural history collection of all types was gathered by him, the greater part of which was inherited by son, Laurentius.

INDEX, 1740

CONTENTS: [2 pgs], Title page, verso blank.; 1-29, Text.; [1 pg], Blank.

VERY RARE. This is the preliminary catalog of Gronov's growing collection of minerals, stones and fossils. In it, he indexes the specimens in his collection through a systematic approach. He divides the species into three divisions: (I) Petras sive Lapides Simples (pp. 1-3), (II) Mineras sive Lapides Compositos (pp. 4-13), and (III) Fossilia sive Lapides Aggregatos (pp. 14-29), which are the equivalent of simple stones, composite minerals and stones, and stone and mineral aggregates. There is no introductory text, leading to speculation that this rare work was circulated among his scientific friends for comment and commentary, in preparation of the expanded 1750 edition.

REFERENCES: BL: [444.c.31]. • Boehmer, *Bibliotheca Historiæ Naturalis*, 1785-9: 4, 48. • Freiesleben, *Sächsische Mineralien-Verzeichnisse*, 1828: no. 11. • Gatterer, *Mineralogischen Literatur*, 1798-9: 1, 277. • LKG: XV 14. • Murray, *Museums*, 1904: 2, 269. • NUC: [no copy listed]. • Soulsby, *Catalogue of the Works of Linneaus*, 1933-6: no. 3609.

1995. 2nd edition, 1750: Index | Supellectilis | Lapideæ, | quam collegit, | in Classes & Ordines digessit, | specificis Nominibus ac synonymis | illustravit | Johannes Fredericus | Gronovius. | Editio altera. | [double rule] | Lugduni Batavorum, | Apud Cornelium Haak, | MDCCCL. 8°; *7 A-B⁸ χ¹ C-G⁸; 90ℓ.; [14], [1]-160, [6] p.

RARE. Very much expanded and enlarged edition. This book is essentially a catalog of Gronov's mineral and fossil collection, that he classified with the helpful advice of Linneaus. Included in the descriptions are notes about the nomenclature of the rocks and minerals. Gronov had a large collection built up from correspondents from

GROSSCHEDEL VON AICHA

around the world. It is one of the earliest mineralogical works to document American localities, with numerous references to minerals found in Pennsylvania that had been supplied by the naturalist and botanist John Bartram [1699-1777]. There are also several minerals listed from Virginia; however, no indication is given of who supplied them. Besides being his friend Gronov was a patron of Linnaeus, to whom he dedicated this work. This second edition is the one more commonly encountered, although it is itself rare.

GROSSMANN, Ignacz. (BORN: Gönez-Ruszká, Abauj County, Hungary, 16 February 1823; DIED: Budapest, Hungary, 21 May 1866) *Hungarian physicist.*

Grossmann attended the University of Prague, devoting himself especially to mathematics and pedagogics. From 1847 to 1851 he was a teacher in Győr-Sziget, followed by two years attending the Josef technical school in Budapest. In 1854 he was appointed principal of the girls' school of the Pester Israelitische Religionsgemeinde. He was appointed In 1857 to a professorship in the

commercial school, where he remained until 1862, when he was made engineer of the Pest-Losonez-Zólyom Railroad Company. Grossmann was the inventor of the mercurial pneumatic pump, although others received credit. In 1854 he discovered a new method of gasometer construction.

FÜHRER, 1857

2001. — German, 1857.

Führer | in der geometrischen | Analyse der Krystallographie. | [rule] | Ein Hilfsbuch | zu den krystallographischen Werken Naumann's, | insbesondere zu dem, als Leitfaden beim Schulunterricht dienenden | Buche: Anfangsgründe der Krystallographie. | Von | J. Grossmann. | [rule] | Mit 29 Holzschnittfiguren und 1 lithographirten Tafel. | [tapered rule] | Leipzig, | Verlag von Wilhelm Engelmann. | 1857.

8°: [i]-xii, [1]-138 p., one folding plate (diagrams). PAGE SIZE: 220 x 140 mm. uncut.

CONTENTS: [i-ii], Half title page, "Führer | in der geometrischen | Analyse der Krystallographie," verso blank.; [iii-iv], Title page, verso blank.; [v], Dedication.; [vi]-x, "Vorwort."—dated May 1857.; [xi]-xii, "Inhaltsverzeichniss."; [1]-138, Text.; [At end], One folding plate.

RARE. Grossmann wrote this book as a companion and enhanced explanation to Naumann's *Anfangsgründe der Krystallographie* (2nd ed., Leipzig, 1854). It begins with a short introduction to the

GROTH

geometric analysis of crystallography that reviews trigonometric and geometric principles. The first section then deduces the formulae through analytical geometry for the Planimetric and Stereometric. The second section, deduces the crystallographical formulae for the crystal systems of Tesseral, Tetragonal, and Hexagonal. A third section provides a combination of the first two sections.

GROTH

GROTH, Paul Heinrich, Ritter von. (BORN: Magdeburg, Germany, 23 June 1843; DIED: Munich, Bavaria, Germany, 2 December 1927) *German mineralogist, crystallographer & geochemist.*

Groth studied at the Freiberg Bergakademie and at Dresden. In 1868, he received his Ph.D. in mineralogy from the University of Berlin. In 1872, Groth became professor of mineralogy at the University of Strasbourg. Then in 1883, he accepted an appointment to the University of Munich where he remained until his death. He founded in 1877, the important periodical, *Zeitschrift für Kristallographie*, which he edited until 1920.

PHYSIKALISCHE KRYSTALLOGRAPHIE, 1876

Physikalische Krystallographie

2003. — German, 1876 [First edition].

Physikalische | Krystallographie | Und Einleitung | In Die | Krystallographische Kenntniss | Der | Wichtigsten Substanzen | Von | P. Groth. | [rule] | Mit 557 Holzschnitten Im Text, Einer Buntdruck- Und 2 Lithographirten Tafeln. | [tapered rule] | Leipzig | Verlag Von Wilhelm Engelmann. | 1876.
8°: π^8 1-33⁸ χ^1 ; 273 ℓ .; [i]-xvi, [1]-527, [3] p., 557 illus., 3 folding plates (one colored), index. PAGE SIZE: 222 x 150 mm.

CONTENTS: [i-ii], Half title page, "Physikalische | Krystallographie." verso blank.; [iii-iv], Title page, verso rights reserved.; [v]-xii, "Vorwort."—dated November 1875.; [xiii]-xvi, "Inhaltsverzeichnis."; [1], "I. Abtheilung. | [rule] | Die Physikalischen Eigenschaften | Der Krystalle."; [2], Blank.; [3]-152, Text.; [153], "II. Abtheilung. | [rule] | Die Geometrischen Eigenschaften | Der Krystalle."; [154], Blank.; [155]-452, Text.; [453], "III. Abtheilung. | [rule] | Die Apparate Und Methoden | Zu Krystallographisch-Physikalischen | Untersuchungen."; [454], Blank.; [455]-512, Text.; [513]-517, "Anhang. | [rule] | Vergleichnungstabelle der

krystallographischen Bezeichnungen | von | Naumann, Miller und Levy.; [518]-523, "Alphabetisches Register."; [524]-527, "Preisverzeichniss | der krystallographischen und petrographischen | Apparate und Utensilien | von | R. Fuess."; [1 pg], "Erläuterung der Tafeln."; [2 pgs], "Verbesserungen und Zusätze."; [At end], 3 folding plates.

PLATES: The three folding lithographic plates have their "Tafel" number located in the upper right-hand corner. There are no descriptions on the plates; however, each illustration is signed at the bottom.

Tafel I. [Colored; showing 13 figures of interference diagrams, signed P. Groth del. Buchdruckerei von G. Fischbach, in Strassburg]. Tafel II. [Shows 7 figures of one and two circle goniometers, signed P. Groth del. Lith. Anst. v. J.G. Bach, Leipzig]. Tafel III. [Shows 10 figures of mineralogical microscopes and their components, signed P. Groth del. Lith. Anst. v. J.G. Bach, Leipzig].

VERY SCARCE. Groth was professor of mineralogy at the University of Munich, who inspired a generation of other crystallographers with his vivid, and well organized lectures. He was one of the outstanding crystallographers of his age, publishing numerous articles and several editions of the work described here. This is perhaps his most important and lasting contribution explaining in great depth the connections between chemical composition of minerals and their crystal structure. This textbook and its subsequent editions were used by every important crystallographer and mineralogist of the time, and Groth's format was adopted, knowingly or unknowingly, by many subsequent authors. The book described here is based upon his lectures on the subject supplemented by an excellent, heavily illustrated, section on the theory and use of various scientific instruments (goniometers etc.) used in mineralogical research. On its publication, the work was deservedly praised for its clear explanations, and it is frequently cited in publications that came after its appearance.

The text is divided into three major sections. I. *The physical properties of crystals*, including the descriptions of the optical, thermal, magnetic and electrical properties of crystals. II. *The geometrical properties of crystals*, including detailed discussions of the seven crystal systems, and their minerals. III. *The apparatus and methods of physical crystallography investigations*, includes information on goniometers, instruments for measuring polarization, stauroscopes, angle measurements, and crystallographic projections, including the drawing of crystals. This section contains wonderful steel engraved illustrations of the apparatus.

RARE. With the development of optical goniometry, polarized light microscopy, and other physical techniques, 19th-century chemists and crystallographers focused on macroscopic properties of crystals such as birefringence, optical activity, pyroelectricity (electric polarization caused by temperature change), and, later, piezoelectricity (electric polarization under external stress), which was discovered by Pierre and Jacques Curie in 1880. These efforts culminated in Groth's *Chemische Krystallographie*, which documents in five volumes what was known about the external form and physical properties of more than 7,000 organic and inorganic crystals that had been characterized by the beginning of the 20th century.

Groth was a pioneer in the development of the optical goniometer, and compiled the monumental collection of crystallographic data *Chemische Krystallographie*, in five volumes between 1906 and 1919. The volumes arranged by chemical compound tabulate the morphological, optical and other properties of over 7,000 crystalline substances (both organic and inorganic), but it contains no information about internal crystalline structures and no discussion of experimental techniques used to arrive at the data. It is a reference still used as a resource for organic chemists who investigate inclusion compounds. The later volumes, published during WWI concentrate on benzene ring structure and aromatic structures that was probably related to the manufacture of poison gas by the German chemists. There are over 3,300 crystal drawings of the described substances.

GROTH

Photo-reproduction reprint: *Chemische Krystallographie*. 5 Vols. 4°, 250 x 305 mm. (9.75 x 12 in). Red Cloth. The 5 volumes total 4,208 pages, with 3,342 “textfiguren.” This massive set, never for sale commercially, was brought to fruition by Dr. Ray Pepinsky, formerly of the Groth Institute of the Pennsylvania State University. It was intended to assist workers in the editing a planned revised edition of Groth.

8°: [i]-viii, [1]-184 p. PAGE SIZE: 264 x 190 mm.

CONTENTS: [i-ii], Half title page, “Tabellarische Übersicht | der | Mineralien | nach ihren | Krystallographisch-Chemischen Beziehungen.” verso blank.; [iii-iv], Title page, verso “Alle Rechte, ...”; [v]-vi, “Vorwort.”—dated November 1897.; [vii]-viii, “Inhalt.”; [1]-170, Text.; [171]-174, “Anhang.”; [175]-184, “Register.”

SCARCE. Updated to include the species new since the previous edition of 1889. Also the changes among the old species made necessary by recent investigations. Groth also includes the new system of crystallographic nomenclature developed in the author’s *Physikalische Mineralogie* (Leipzig, 1895).

5th edition, 1921: Mineralogische tabellen von P. Groth und K. Mieleitner. München, Berlin, R. Oldenbourg, 1921. 4°: [4], 176 p. The final edition of Groth’s popular tables written with the assistance of Karl Mieleitner [see note below].

Karl Mieleitner. (BORN: Munich, Bavaria, Germany, 31 March 1890; DIED: Munich, Bavaria, Germany, 15 March 1923) *German mineralogist & historian of mineralogy*. Born the son of a shoemaker, Mieleitner became in 1913 assistant for the Bavarian state mineral collection at the University of Munich, where in 1919 he succeeded F. Grünlung as ‘Konservator.’ He was an enthusiastic and energetic worker, producing several papers within a few years. He developed an interest in the history of mineralogy and published before his early death German translations, with authoritative notes, of the old works of Steno, Bartholin and Capperl.

2016. — German, 1891.

Führer durch die Mineraliensammlung des Bayerischen Staates im Gebäude der Kgl. Akademie der Wissenschaften (Wilhelminum) in München von Paul Groth. München, Verlag der Akademie der Wissenschaften, 1891.

8°: [1]-331, [1] p.

RARE. In 1872, Franz von Kobell wrote “Die Mineraliensammlung des bayerischen Staates” (see, *Abhandlungen den könig. Bayerische Akademie der Wissenschaften*, 11 (1872), no. 1, 36 p.). Apparently, that was the only description of the collection of the Bavarian State mineral collection until Groth compiled this massive catalog.

Supplement, 1899: Nachtrag zu dem Führer durch die Mineraliensammlung des Bayerischen Staates im Gebäude der Kgl. Akademie der Wissenschaften (Wilhelminum) in München von Paul Groth. München, Verlag der Akademie der Wissenschaften, 1899. 16 p.

2017. — German, 1921.

Elemente der physikalischen und chemischen Krystallographie. München und Berlin, 1921.

8°: viii, 363 p., 4 colored plates, 962 illus., 25 stereoscopies (in pocket at the front of the book).

RARE. One of Groth's last major crystallographic books the first published after the important discoveries of X-ray analysis of crystals in 1912. Abridged from the text of the author's popular *Physikalische Krystallographie*, this book is fully illustrated. Apparently it is a rare volume, being published during Germany's period of hyperinflation after World War I.

Entwicklungsgeschichte

2018. — German, 1926 [First edition].

Entwicklungsgeschichte | Der Mineralogischen | Wissenschaften | Von | P. Groth | Mit 5 Textfiguren | Berlin | Verlag Von Julius Springer | 1926.

8°: π^3 1-16⁸ 17³; 134 ℓ .; [i]-iv, [2], [1]-261, [1] p., 5 illus., name and subject indexes. PAGE SIZE: 230 x 154 mm.

CONTENTS: [i-ii], Title page, verso "Alle Rechte, Insbesondere Das Der Übersetzung | In Fremde Sprache, Vorbehalten. | Copyright By Julius Springer In Berlin."; [iii]-iv, "Vorwort."—signed P. Groth, April 1926.; [1 pg], "Inhaltsverzeichnis."; [1 pg], "Druckfehler."; [1], "Krystallkunde."; [2], Blank.; [3]-143, Text.; [144], Blank.; [145], "Mineralkunde."; [146], Blank.; [147]-237, Text.; [238], Blank.; [239], "Biographische Notizen | ..."; [240], Blank.; [241]-256, Text.; [257]-259, "Sachregister."; [260]-261, "Nameregister."; [1 pg], "Nachtrage."

RARE. This essay, which develops an historical perspective on the mineralogical sciences as seen from the view point of discoveries in crystallography, is especially interesting having been written by one of the greatest mineralogists. The text is divided into two sections: "Krystallkunde" and "Mineralkunde," with the period covered going to the end of the nineteenth century. The first section contains chapters that cover geometrical and chemical crystallography, as well as the recognition of a connection between the forms of crystals and their optical properties. Information is also given concerning the then recent developments in X-ray crystallography. The mineralogical section has chapters devoted to the crystallography of minerals, the optical determination of the rock-forming minerals, paragenesis and the chemistry of minerals, including the study of their alteration and artificial reproduction. Important regional mineralogies are mentioned, and very short accounts of important national mineral collections are also given. An appendix gives 37 biographical sketches of prominent mineralogists and crystallographers from the past. The work concludes with two short indexes, one of subjects and the other of names. The latter is incomplete with many more names mentioned in the text than appear in the index.

The title page and sectional titles are printed in red and black.

GUETTARD

Each part and each "classis" of parts 2-4 has a special title page. PAGE SIZE: 462 x 328 mm.

CONTENTS: [Part 1] [i-ii], Title page, verso blank.; [iii-iv], "Engraving by Jo. Dom. Cumpigia del e P. Ant. Passi," verso blank.; [v-vi], Frontispiece, verso blank.; [vii-viii], Portrait of Gualtieri, Maria Madd. Gozzi del, P. Ant. Pazzi fc, verso blank.; VII-VIII, Dedication to Francesco III of Toscana.; IX-XVI, Preface.; XVII-XX, "Introductio ad Historiam Testacorum.," XXI-XXIII, "Totius Indicis Prospectus et ordo.," [1 pg], "Acropora" [=List of plates]; [16 unnumb. pages comprising frontispiece and 8 plates of which 7 are numbered].

[Part 2] [30 unnumb. pages, comprising 13 plates of which 12 are numbered and 3 engraved text leaves].

[Part 3] [116 unnumb. pages, comprising 58 plates of which 51 are numbered 20 to 70].

[Part 4] [76 unnumb. pages, comprising 38 plates of which 34 are numbered 71 to 104].

[Part 5] [14 unnumb. pages, comprising 6 plates numbered 105 to 110].

PLATES: Gualtieri's portrait is engraved after an original painting by J. Menabuoni. All the plates were engraved by P. Antonio Pazzi.

RARE. A beautifully produced book of which only a few special copies were meant to contain the portrait of Gualtieri, which is usually missing. This title is one of the most curious and beautiful conchological works ever printed. The plates depict many of the specimens standing on their apices, and the engraving and typography throughout the work is exceptional. Gualtieri's patron, the Grand Duke of Tuscany, was a keen collector of shells and by many accounts had a magnificent cabinet including 360 species sent to him by RUMPHIUS. Gualtieri apparently was given his choice of any duplicates.

LKG and Ward & Carozzi list this work in their catalogs and it is presumed this title contains some information relevant to mineralogy.

GUETTARD, Jean Étienne. (BORN: 22 September 1715; DIED: 8 January 1786) *French physician, geologist, botanist & naturalist.*

Guettard was curator of the natural history collection of the French scientist René de Réaumur (1741) and a member of the Faculty of Medicine of Paris (1742). From 1747 to 1752 he was médecin botaniste to the French prince Louis, duc d'Orléans, and later was also supported by Louis son Louis-Philippe. He discovered the volcanic nature of the Auvergne region in France, mapped the mineralogical distributions of much of Europe, and collaborated with the French scientist Antoine Lavoisier on the preparation of a geological survey of France.

CONTENTS: [2 pgs], Half title page, "Description | De La France. | [rule] | Département Du Rhône. | Gouvernement De Dauphiné," verso "Ce Volume contient.," [2 pgs], Title page, verso blank.; [2 pgs], "Seconde Partie. | [rule] | Minéralogie | Du Dauphiné. | Par M. Guettard, de l'Academie Royale | des Sciences, &c.," [1 pg], Blank.; [1]-248, Text.; [plates]; [249]-255, "Explication | Des Planches.," [1 pg], Blank.

PLATES: This work contains 20 well executed hand-colored plates on 10 leaves all signed Carême De Fecamp del. J. Robert sculp. The plates break down as follows: 1-2, Fossil sponges. 3-4, Various fossils. 5-8, Fossil shells. 9-10, Various fossils. 11-12, Various rocks. 13, Azurite

spheres. 14, Quartz crystals. 15-16, Quartz crystal clusters (magnificent illustrations). 17-18, Calcite. 19-XX, Plants.

RARE. The present work was first published in 1779. It is here part of the large series *Description Générale et Particulière de la France*, with a separately printed title. Guettard wrote a number of works on the geology and mineralogy of France. He is best known for his discovery of the volcanic nature of Auvergne and his attempt to construct a geological map of France.

This is the rare second edition of the first book on fossils and minerals of the province Dauphine in France published within the "Description de la France, département du Rhone, gouvernement de Dauphine, in 3 parts in one, including also XXIV, 102p.: Abrege de l'Histoire du Dauphine et des Princes Dauphins with a nice engraved text vignette showing the "Price des possessions du Dauphine en 1349" and the third part: Idee generale de ce gouvernement suivant ses principales divisions géographiques, physiques, économiques, ses productions, agriculture, commerce, manufactures, with 240p. and its own titlepage published in 1784. By far the most important part is the mineralogical one authored by Guettard. This later edition seems to have less pages although it's printed in 2 columns but has 20 plates instead of 19 and may be this is a revised and enlarged edition.

Facsimile reprint, 1999: *Minéralogie du Dauphiné*. Paris 1782. 4°: xiii, 255 p., 20 color plates. [This limited edition reprint also includes the "note de l'éditeur", an essay on the author and "histoire géologique du Dauphiné" with a map by W. Fischer.]

2°: xii, 212 p., 32 folding plates, illus., maps. PAGE SIZE: 420 x 600 mm.

RARE. No more published. Guettard had been officially commissioned to prepare an atlas of the mineralogical wealth of France and in 1767 was authorized to begin his work and visit Alsace and Lorraine in order to collect the data for that region. He invited a young ANTOINE LAVOISIER to accompany him. Unfortunately political intrigue and funding issues were to prevent the completion of the publication of the atlas.

The first part was published under the joint authorship of Guettard and ANTOINE GRIMOALD MONNET although Lavoisier did much of the preparatory work. He had not only taken the field notes during his 1767 trip with Guettard, but he also collated and arranged the mass of collected information, and prepared most of the detail work of the geological maps. By 1770 he had supervised the engraving of 16 plates for the expected series of 230 maps for the whole of France. Lavoisier also invented the feature of showing on the maps the heights of geological strata. But Monnet who added 16 plates and a long text did not credit Lavoisier, although the latter angered by the treatment protested bitterly. Monnet published the whole as a first part

GUGLIELMINI

of the *Atlas*, but unfortunately no further installments ever appeared.

GUGLIELMINI

GUGLIELMINI, Domenico. (BORN: Bologna, Italy, 27 August 1655; DIED: Padua, Italy, 12 June 1710) *Italian physician & hydraulic expert.*

At the University of Bologna, Guglielmini studied mathematics under Geminiano Montanario [1633–1687] and medicine with Marcello Malpighi [1628–1694]. In 1678, he graduated with his medical degree, and soon thereafter became associated with the city's famous Museum of Aldrovandi. In 1686, he accepted a position with the water works of the Bologna state. In this post, Guglielmini began a lifelong study of fluid mechanics and hydrology, on which he wrote several books that are considered among the first scientific works on the subject. He returned to Bologna in 1690 as professor of mathematics at the city's University. He accepted a professorship in mathematics at Padua in 1698, where in 1702 he was also named a professor of medicine. He died there after a long illness in his 55th year.

D. Fulgentius Orighettus Cler. Reg. | S. Pauli & ..."; [At end], One folding plate.

EXTREMELY RARE. An important contribution to the development of crystallography, *Riflessioni Filosofiche* is among the first publications to scientifically treat the internal structure of crystals. The author entered into the study on the evening of March 21, 1688 at the *Accademia Filosofica Esperimentale* (Academy of Philosophical Experimenting) of Count Luigi Ferdinando Marsigli in Bologna. At this particular meeting, Guglielmini demonstrated several experiments in the

precipitation of crystals from various saline solutions. Careful study of the resulting specimens led Guglielmini to conclude that only four primary crystal shapes existed, and that all other geometries observed arose from various internal combinations of these four basic shapes and their associated salt. The four salts that possessed these forms were common salt (the cube), salt of vitriol (the rhombohedron), niter (the hexagonal prism), and alum (the octahedron). The author further hypothesized that although endowed with unalterable shapes, these four base types were built from collections of very small, unseeable pieces of the named salt. Even though the concepts rely upon seventeenth century doctrine, Guglielmini's studies into the nature of crystals was a significant advance in the emerging science of crystallography. Apparently printed in a small edition, this is a very rare book, with no copies recorded in NUC or the *British Library Catalog*.

The one on the left shows a medical staff motif and the one on the right pictures an astrolabe. The signature at the base could not be read.

SCARCE. Translated by H. Fiot from *Riflessioni Filosofiche* (1st ed., Bologna, 1688). According to Mieleitner (1923), there is a Latin translation of the *Riflessioni Filosofiche* contained within the work (see: 1, 65-104). He does not consider this to be a good rendering of the work, either. This collected edition also contains a fine engraved portrait as well as a long biography of Guglielmini by John Baptista Morgagni.

Giovanni Baptista Morgagni. (BORN: Forlì, Italy, 25 February 1682; DIED: Forlì, Italy, 5 December 1771) *Italian physician*.

RARE. First edition of this treatise on minerals, metals, gems and gemstones. "That mineralogy had made little advance during the previous hundred years might be inferred from the fact that Giovanni Guidi

of Volterra in 1725 dedicated to Ferdinand II, and published at Venice a treatise *De Mineralibus* by one of his ancestors who lived from 1464 to 1530, and there was another printing of the book in 1627" (Duveen). This is not however a justified position, since the volume is principally concerned with legal questions concerning alchemists, gems and the like. Guidi also includes his own commentary and includes much information on the working practices of silver- and goldsmiths, gem merchants, cutters and polishers, etc. "The section on gems referred to by Thorndike appears on pages 64-73, and as in the other portions of the work, consists of a series of questions raised by Guidi and answered by quotations or statements taken from other authorities, among them Pliny, Isidore of Seville, the Bible, etc. The questions on gems are general and jump from topic to topic with little solid information divulged. Questions on pearls are included. More on gems appears in the section entitled "De Ornamentis," pp. 174-80" (Sinkankas). The *British Library Catalogue* claims that although the volume was authored by Joannes the Elder, it was edited and published by Joannes the Younger.

GUILD, Frank Nelson. (BORN: Jaffrey, New Hampshire, USA, 28 December 1870; DIED: Tucson, Arizona, USA, 12 March 1939) *American educator, geologist, chemist & mineralogist.*

Son of a clergyman, Guild attended the University of Vermont, graduating with a B.A. in 1894 and his masters in 1903. He later studied in Chicago, Paris and Heidelberg under Goldschmidt, but it was Stanford University that conferred on him a Ph.D. in 1917. He came to the faculty of the University of Arizona in 1897 as professor of chemistry and mineralogy, remaining throughout his career except those periods when he studied abroad or at Stanford. He maintained contact with all the best known mineralogists of Germany, France, England and Sweden until his death. Guild was a recognized authority in optical mineralogy, a study he continued after his retirement in 1934. However, his investigations of the paragenesis of silver minerals are the subject most prevalent in his published writings. Over more than thirty years he trained numerous students in mining and allied industries. By presidential appointment he served several times on the United States assay commission.

RARE. This is a richly and elaborately illustrated work on economic mineralogy, petrology, and related

topics. Published as the sixth part of a general series the publisher spared little expense in the production of this book. The original binding is an ornately decorated cloth, highlighted in gold, while the title pages are expertly printed in red and black ink. Through out the text, numerous illustrations depict descriptions in the text, and are additionally enhanced with the inclusion of eight plates (two chromolithographs) showing mining scenes, crystals, precious stones, mineral specimens, etc. The introduction (pp. 1-147) covers the basics of mineralogy, including definitions, crystal forms, instrumentation, physical and chemical properties, etc., and is based on the work of Groth, Schrauf, Doelter and Bauer. Precious stones and semi-precious stones are then described (pp. 148-301). Quarried stones, such as marble and granite are discussed (pp. 302-458), followed by various metallic ores (pp. 459-615). The economics and occurrences of coal are treated (pp. 616-697), as are salt (pp. 698-740). Comprehensive name and subject indexes close the work. Eight pages of advertisements are unusual in that they are printed in red and black!

GURNEY, Goldsworthy, Sir. (BORN: Treator, near Padstow, Cornwall, England, 14 February 1793; DIED: Reeds, near Bude, Cornwall, England, 28 February 1875) *English physician & inventor.*

In 1820 Gurney settled as a surgeon in Wadebridge, spending his leisure time in the study of chemistry. He succeeded Dr. Thomson in the lectureship of the Surrey Institution. Gurney invented steam carriages were the first self propelled road vehicles employed to carry passengers. They were used them to run a service from Gloucester to Cheltenham.

Blowpipe."; [2 pgs], Works recently published.

RARE. **REWORK COMMENTARY:** The Surrey Institution, Blackfriars, founded in 1808, was, after the Royal Institution and London Institution, the third establishment in London aimed at fostering

and disseminating scientific, technical, and literary knowledge and understanding among a wider public. The Institution offered its proprietors and subscribers the use of an extensive reference library and reading rooms and, most importantly, the opportunity to attend courses of lectures on scientific, technological, and other subjects. Though popular in approach, the lectures conformed to high educational standards and were delivered by recognized authorities in their fields. In the Surrey Institution's celebrated auditorium, the 'Rotunda', there appeared over the years such notable scientists as Accum, Thomson, and Gurney on chemistry, Millington, Mason Good, and Woodward on natural philosophy, Bakewell on geology, and Shaw on natural history; literature was brilliantly represented by Coleridge and Hazlitt. During its relatively brief life-span (1808-23)-cut short by financial stringencies-the Surrey Institution provided access to scientific knowledge and thinking to a wide and appreciative audience. As a meeting place of scientists and men of business with mercantile and manufacturing interests, it performed an important function in cross-fertilizing and reinforcing ideas on innovation and enterprise against the background of the ongoing Industrial Revolution.

Gurney's course of chemical lectures was attended amongst others by Michael Faraday. While at the Surrey Institution he made his first invention, a oxyhydrogen blowpipe. He appended at the end of his course text an extensive description of this instrument together with 3 illustrative plates. For this invention he was the recipient of the Gold Medal of the Society of Arts.

8°: [1]-50 p., illus.

VERY RARE. In a previous treatise, *Lithophylacium Mitisianum*, Güssmann under the heading of 'native iron' described the large Krasnojarsk meteorite in some detail and various theories as to its origin. It was probable, Güssmann concluded that it had fallen from the sky. In this small work, written for the young Count Eugen Wr̄bna, Güssmann writes opposing the hypothesis that meteorites are ejecta from lunar volcanoes, and complains that his previous treatise had been completely ignored by other researchers.

HABERLE, Carl Constantin. (BORN: 11 February 1764; DIED: Budapest, Hungary, 31 May 1832) *German meteorologist, botanist & naturalist.*

Haberle became professor of botany at the University of Pest in 1817 and succeeded Paul Kitaibel as director of the botanical garden upon the latter's death. He published in the fields of botany, mineralogy and meteorology.

| 2. Zu des Hrn. Prof. Haüy *Traité de Minéralogie* und der da= | von erschienen Uebersetzung unter dem Titel: Lehrbuch der | Mineralogie, vom Bürger Haüy. | 3. Zu den bisherigen Lehrbüchern der Mineralogie, nach | des Hrn. Bergrath Werner's System. | Nebst | neuen eigenen Beobachtungen über die Krystallisationsverhält= | nisse und das regelmäßige Gefüge des Arragon's und | des Kalkspathes. | Von | Carl Constantin Haberle | Doctor der Philosophie, der Academie nützlicher Wissenschaften zu | Erfurt, und der mathematisch=physikalischen Gesellschaft daselbst | Mitglied. | [rule] | Mit einem Kupfer. | [tapered rule] | Weimar, | im Verlage des Landes=Industrie=Comptoirs. | 1805.

8°: [i]-xvi, [1]-412, [2] p., one plate.

CONTENTS: [i-ii], Half title page, verso blank.; [iii-iv], Title page, verso blank.; [v-vi], Dedication to Louis von Mielecki.; [vii]-xvi, "Vorrede."; [1]-412, Text.; [2] pgs, Errata.; [At end], One plate.

RARE. This is the author's general introduction to mineralogical studies that includes overviews of A.C.G. Batch's, Haüy's and Werner's classification methods. General principals are described in the areas of crystallography, mineral determination, chemical and physical properties, but the bulk of the volume is taken up by a descriptive mineralogical classification system.

Sammlung von Krystall-Modellen zur anschaulichen Erläuterung der Grundgestalten, Hauptkerngestalten und Hauptkrystallgestalten der Mineralien so wie auch der Verhältnisse, welche man unter Abstumpfungen, Zuschärfungen und Zusätfungen begreift für Anfänger im Studium der Mineralogie von Dr. C.C. Haberle. Weimar, im Verlage des Landes-Industrie-Comptoirs, 1805.

8°: [1]-38 p.

CONTENTS: [1-2], Title page, verso blank.; [3], "Vorrede."; [3]-6, "Zum Inhalt des Werkes."; 7-38, "Krystall-Modelle. No. 1-106."

VERY RARE. This is another of the very odd crystallographic works intended to be cut apart by the buyer, so that paper crystal models could be folded and glued together. The purpose was to allow the buyer to study crystal forms with cheap 3-dimensional forms rather than the typical flat pictures found in most crystallographic works. In this instance, Haberele has created a text in which 106 such models could be constructed. Due to its intended purpose of being cut apart, very few copies of this title appear to have survived to the present time.

Neueste physikalische-politische Reisen in den Jahre 1788. und 1789. Durch die Dacischen und Sarmatischen oder Nördlichen Karpathen. Nürnberg, Raspe 1790

Four parts in two vols. [Part 1] 8°: xxiv (ie., xxii), 206, [2] p. [Part 2] 8°: xvi, 249, [9] p. [Part 3] 8°: xix, [iii], 247, [1] p. [Part 4] 8°: xiii, [iii], 254, [4] p. Separate titles to each part, engraved vignette maps on all titles. With engraved frontispiece, 25 folding plates (22 hand-coloured) and 3 large folding tables, 1 folding map and 27 text engravings.

RARE. The author's remarkable work of paleontology, mountaineering and botany from a decidedly geological and mineralogical point of view.

HAIDINGER

It is a valuable study of the most eastern range of the Alps with extraordinary illustrations (some panoramic views) depicting ethnographic observations of regional inhabitants in their native costumes, and detailed descriptions of the local flora, fauna, and other botanics, as well as stratigraphic renderings of stones, ore, minerals and fossils.

Each of the four volumes describes the travels for a number of years. For example, I. 1788 and 1789; II. 1788, 89 and 90; III. 1791, 92 and 93; IV. 1794 and 95.

4°: π^1 A-G⁴ H³; 31ℓ.; [2], [1]-61, [1] p. Head- and tailpieces. PAGE SIZE: 218 x 154 mm.

CONTENTS: [2 pgs], Title page, verso blank.; [1-2], Second title page (no vignette), verso blank.; [3]-10, Introduction.; [11]-61, Text.; [1 pg], Blank.

RARE. A catalog of the minerals in the Royal collection at Vienna, fully annotated with references to the leading mineralogists of the day. It is divided into the following classes: metals, combustible minerals, salts, earths, and stones. There is also a description of the collection's volcanic products and fossils. The first pages, which act as an introduction, provide a short history of the collection. This is apparently the first published account of the mineral collection of this remarkable institution.

VERY SCARCE. Concerns petrology.

HAIDINGER, Wilhelm Karl Ritter von. (BORN: Vienna, Austria, 5 February 1795; DIED: Dornbach, near Vienna, Austria, 19 March 1871) *Austrian mineralogist & geologist.*

Haidinger received his basic education in Vienna, but moved to Graz in 1812, where he became assistant to F. MOHS. Mohs recommended him as a traveling companion to Count Breunner, and it was during these travels he was introduced to Georges Cuvier [1769-1832] and J.-B. Biot [1774-1862] in Paris and George Greenough [1778-1855], David Brewster [1781-1868] and T. ALLAN in Edinburgh. Haidinger must have made an impression in Edinburgh as he was hired to arrange Allan's mineral collection in 1823. While in Scotland, he began to publish papers on the determination of mineral species as well as his first major work, an English translation of Frederick Mohs *Grundriss der Mineralogie* (2 vols., Dresden, 1822-4), which was published in 1825. After 1827, Haidinger also became interested in pseudomorphs and the absorption of light in crystals—the later studies probably sparked by his association with David Brewster. In 1827, he returned to Elbogen, Austria where he worked in a china factory founded by his two brothers. He remained there until 1840 when an appointment as an inspector of mines (Bergrath) took him to Vienna. Through many years of patient lobbying, Haidinger helped establish the Austrian Geological Survey in 1849, of which he was named its first director. Haidinger also was a co-founder and member of the Imperial Royal Geographical Society in Vienna, co-founder of the Werner Association for Geological Research in Moravia and Silesia, co-founder of the Geological Association for Hungary, and co-founder of the Società geologica Milan. Haidinger is also credited with discovering a phenomena that enables detection of plane polarized light, now known as “Haidinger's brushes” in his honor.

PLAN OF A COURSE OF LECTURES, 1792

2066. — English, 1792.

A | Plan | Of A | Course of Lectures | On | Mineralogy, | To Which Is Prefixed | An Essay | On The Different Kinds Of | Mineral Collections, | Translated From The German Of Professor | Werner. | [tapered rule] | by John Hailstone, | Woodwardian Professor Of Fossils In The | University Of Cambridge. | [tapered rule] | Cambridge, | Printed by J. Archdeacon Printer to the University; | For J. & J. Merrill, Cambridge; T. Cadell, Strand, | B. White & Sons, in Fleetstreet, G. & T. Wilkie, | and J. Evans, in Paternoster Row, London. | MDCXCII.

8°: π^3 A-E⁸ F⁴; 47 ℓ .; [2], [i]-iv, [1]-88 p.

CONTENTS: [2 pgs], Title page, verso blank.; [i]-iv, "Preface"—dated June 24, 1792.; [1]-41, "On the Different Sorts of Collections of which a complete Cabinet of Fossils ought to Consist. By A.G. Werner ..."; [42]-43, Commentary by Hailstone about Werner's treatment of the Ohain collection not contained in the previous section.; [44]-47, "Appendix."—discussion of Michael Mercati's collection of minerals.; [48], Blank.; [49]-53, "Plan of a Course of Lectures on Mineralogy. Introduction.; 54-57, "Part the First. Description of Fossils."; 58-78, "Part the Second. Systematical Arrangement of Fossils."; 79-88, "Part the Third. Geognosy or the Knowledge of the Earth's internal Structure."

VERY RARE. Hailstone studied under Werner at Freiberg and based this work on the theories of his former teacher, as well as one of Werner's articles, "Von den verschiednerley Mineraliensammlungen, aus denen ein vollständiges Mineralienkabinett bestehen soll" (see: *Sammlungen zur Physik und Naturgeschichte*, 1 (1778), 387-420). Although the title of this work and Hailstone's position as Woodwardian Professor of geology at Cambridge would dictate otherwise, it is not clear that he ever delivered a single lecture.

HALL, Frederick. (BORN: Grafton, Virginia, U.S.A., 1780; DIED: Peru, Illinois, U.S.A., 27 July 1843) *American chemist & mineralogist*.

After graduating from Dartmouth in 1803, Hall tutored there for a year before accepting a position at Middlebury College. He taught mathematics and natural philosophy there until 1824. In 1808 he visited Europe, meet many of the notable scientists and sent back word of Humprey Davy's isolation of potassium and sodium—probably the first announcement to reach America. During his forties, Hall studied to become a physician, receiving his M.D. from Castleton (exinct) in 1827. From 1824 to 1828, he taught chemistry and mineralogy at Trinity College. He then went to Baltimore as president of Mt. Hope College (exinct) and from 1835 onwards he also lectured on mineralogy at Columbian College in Washington, D.C. In 1840, he was elected to a professorship in chemistry and pharmacy in Columbian's Medical School. Perhaps to seek information on mineral resources, Hall traveled west in the spring of 1843. Several weeks later word arrived back that he had succumbed to some form of cerebral disease.

CATALOGUE OF MINERALS, 1824

2067. — English, 1824.

Catalogue | Of | Minerals, | Found In The State Of Vermont, | And | In The Adjacent States; | Together With Their Localities: | Including A Number Of | The Most Interesting Minerals, | Which Have Been Discovered | In | Other Parts Of The United States; | Arranged Alphabetically. | Designed, Principally, For The Use Of Persons, | Who Have Attended Mineralogical Lectures, | In Making Collections Of Specimens. | [double rule] | By Frederick Hall, | Professor Of Mathematics And Natural Philosophy, And | Lecturer On Mineralogy, In Middlebury College. | [double rule] | Hartford: | P.B. Goodsell, Printer. | 1824.

8°: π^2 2-64; 22 ℓ .; [1]-44 p. PAGE SIZE: 215 x 124 mm.

CONTENTS: [1-2], Title page, verso "District of Connecticut, ss."; [3]-4, "Advertisement."; [5]-44, Text.

VERY SCARCE. This is the earliest example published in the United States of a separately issued state mineralogy. Approximately 140 mineral species are alphabetically arranged and described within this

slim volume. Most species mentioned have localities within the state boundaries of Vermont, while a few are found only in the adjoining states. For his research, Hall relied heavily upon the mineralogical texts of PARKER CLEVELAND and HENRY SCHOOLCRAFT, as well as the periodical *The American Journal of Science*.

REFERENCES: Hazen & Hazen, *American Geological Literature*, 1980: no. 4650 [lists 3 notices of].

2068. — English, 1836.

A Synopsis of a Course of Lectures on Mineralogy Delivered at the Medical College, Washington, in the Winter of 1835-6. Washington: J. Gideon, jr. (printer), 1836. By Frederick Hall, M.D., L.L.D., late president of Mount Hope College, Md. Washington, Jacob Gideon, Jr., printer, 1836.

4°: [1]-24 p.

VERY RARE. Hall was probably self-taught as a mineralogist there being few formal classes in the subject in New England. Even so, he excelled in the subject and was able to offer in the winter of 1835-6 a course on the subject. It consisted of 30 lectures. Students were also allowed to view more than 5,000 specimens from his own collection to reenforce concepts taught. Non-students could also attend at a cost of \$10 per head. In 1838, he gave Dartmouth \$5,000 to endow a professorship of mineralogy, plus specimens appraised at \$5,000. In addition, he bequeathed the college, his alma mater, land valued at several thousand dollars and the remainder of his collection for the same purpose.

HALLOY, Jean Baptiste Julien D'Omalus D'.

See: Omalus D'hallow, Jean Baptiste Julien D', Baron.

HAMILTON, William, Sir. (BORN: Henley-on-Thames, Park Place, London, England, 13 December 1730; DIED: London, England, 6 April 1803) *English diplomat & archeologist*.

Diplomat, archaeologist, and collector, and British envoy and plenipotentiary at Naples from 1764, where

HAMILTON

his embassy became a cultural and musical centre; he entertained many travellers on the Grand Tour, studied Vesuvius (recording his observations in *Campi Phlegraei: Observations on the Volcanos of the Two Sicilies*, 1776), collected so-called Etruscan vases and paintings, and in 1791 married, as his second wife, Emma Hart (born Amy Lyon) who was to achieve notoriety as the mistress of Nelson. The Hamiltons were recalled to England in 1800, where Sir William died, with both Emma and Nelson attending his deathbed. His friends and correspondents included Beckford and Horace Walpole, and his collections exerted a wide influence on neo-classicism in Britain; one of his most important collections of vases, terracottas, coins, etc., sold to the British Museum in 1771, laid the foundation for its department of classical antiquities.

Fourth son of Lord Archibald Hamilton. In 1758 he married Catherine Barlow, the daughter of Member of Parliament Hugh Barlow. He became ambassador of England in Naples in 1764. He studied the excavations at Pompei and published scientific books on vases. His first collection of vases he sold to the British Museum, the second collection went down with the ship that was transporting them to England on 12 Oct 1798.

After Catherine's death he married Emma Lyon when he was sixty years old. Emma eventually became far more famous than her husband as the mistress of Lord Nelson.

Hamilton was elected FRS in 1766,

Observations on Mount Vesuvius, Mount Etna, and other Volcanos, in a series of letters addressed to the Royal Society, from the Honourable Sir William Hamilton ... To which are added, explanatory notes by the author, hitherto unpublished. London, T. Cadell, 1772.

8°: [i]-iv, [1]-179, [1] p., frontispiece (folding map), 5 plates.

VERY SCARCE. Edited by the publisher Thomas Cadell. While he was the British Envoy to the Court of Naples, Hamilton made many important observations on the volcanoes of the region including Etna and Vesuvius as well as the extinct volcanoes of the Rhineland. With the companionship of the geologist and naturalist Hugh Strickland [1811-1853] the pair studied the vulcanology and geology of Asia Minor. Their observations were sent to the Royal Society in a series of important letters, which were gathered together and published as this study. Later, Hamilton would follow up on this work with his magnificently illustrated and monumental *Campi Phlegraei* [which see entry below].

To which are added, explanatory notes by the author, hitherto unpublished. A new edition. London, Printed for T. Cadell, 1774.

8°: A² B-M⁸ N²; 92ℓ.; iv, 179, [1] p., 6 engraved plates: numbered Plate I-IV (single-page plates, at pp. 40, 41, 44, 55, 89) and 'Philos. Trans Vol. LXI. Tab.I', signed 'Basire Sc.' (foldout map, at p. 44). PAGE SIZE: 181 x 121mm.

VERY SCARCE. First collected edition, edited by Thomas Cadell, with additional notes supplied by Hamilton, of papers first published in Philosophical Transactions.

Hamilton was elected FRS in 1766, and these papers were the first published the results of his extensive studies on volcanoes - he climbed Vesuvius at least twenty-two times. These detailed reports were important in the development of "vulcanism" (Porter Earth Sciences 5-14). His great colour plate book of views of volcanoes, *Campi phlegraei*, was not published until 1776.

His Britannic Majesty's Envoy Extraordinary, And Plenipotentiary | At The Court Of Naples. | To which, in Order to convey the most precise idea of each remark, a new and | accurate Map is annexed, with 54 plates illuminated, from Drawings taken | and colour'd after Nature, under the inspection of the Author, | by the Editor Mr. Peter Fabris. | Naples MDCCLXXVI. | [ornate rule] | Observations sur les volcans des deux Siciles | telles qu'elle on été communiquées à la Societé Royale | de Londres | par La | Chevalier Hamilton | Chevalier de l'Ordre du Bain, Envoye Extraordinaire et Plenipotentiaire de sa Majeste Britannique à la Cour de Naples, | et Membre de la Societe Royale de Londres | auxquelles pour donner une idée plus precise de chaque Observation on a ajouté une Carte | nouvelle & tres excite avec 54 planches enluminées d'après les Desseins faits | & Colories sur la nature même, sous l'Inspection de l'Auteur, | par l'Editeur le Sieur Pierre Fabris | Naples. | MDCCLXXVI.

Text and atlas. [Text] 2°: 90, [2] p., double page map; [Atlas] 2°: 53 colored plates, 54 ℓ . Text is in English and French in parallel column throughout. PAGE SIZE: 460 x 328 mm.

CONTENTS: [Text] [2 pgs], Title page, verso blank.; [Plate I. Engraved and pictured title page.]; [2 pgs], Explanation to preceeding plate, verso blank.; [Double page folding map.]; 3-13, Dedication to Sir John Pringel.; 14-90, "Observations on Mount Vesuvius."; [1 pg], Text in Latin.; [1 pg], Blank.

[Atlas] [2 pgs], Title page, verso blank.; plates II-LIIII, with one leave of explanatory text interspersed between the plates.

PLATES: The plates are colored and printed on toned paper to appear like original drawings. No descriptions appear on the plates. This is supplied by the leave of explanatory text in both French and English that accompanies each plate. Plate I is bound in after the title page, all others are at the end of the volume.

Descriptions for the following list of plates was taken from the explanatory letter press that accompanies each plate.

[I. Engraved and pictured title page, showing 6 small views with the words "Societati Regiae Londini Gulielmus Hamilton Baln- [sic] Ord-Eques-D.D.D.CIIsCCLXXVI."]. II. [Six plans of the Top of Mount Vesuvius]. III. [View of Naples taken from Pausilipo]. IV. [View of Naples from the Sea Shore]. V. [View of eruption of Lava from the Crater of Mt. Vesuvius]. VI. [View of the Great Eruption of Vesuvius from the Mole of Naples]. VII. [View of Mount Vesuvius from the Sea shore at Resina]. VIII. [Representation of a thick stratum of Lava]. IX. [Interior View of the Crater of Mount Vesuvius before the Great Eruption].

X. [Interior View of the Crater of Mount Vesuvius before the Great Eruption]. XI. [View of Mont S. Angelo]. XII. [View of an eruption 23 December 1760]. XIII. [View of the state of the Little Mountains raised by the explosion of 1760]. XIV. [View of the Crater or inside on the cone of the Little Mountain]. XV. [Section of part of the Cone of the Mountain of Somma]. XVI. [Entrance of the Grotta of Pausilipo]. XVII. [Bird's eye views from the convent of Camaldoli]. XVIII. [The Lake of Agnano]. XIX. [View of a section of a cone of Astruni].

XX. [View into the Crater of Astruni]. XXI. [View of the hot spring called the Pisciarelli]. XXII. [View of the Porto Pavone]. XXIII. [View of part of the outside of the cone of the Solfaterra]. XXIV. [View of Puzzoli]. XXV. [View of the Solfaterra]. XXVI. [Entrance of the Grotta of Pausilipo]. XXVII. [View taken from the bottom of the Crater of Monte Nuovo]. XXVIII. [View taken from the top of Monte Gauro]. XXIX. [View of the Lake Avernus].

XXX. [View of the island of Ischia]. XXXI. [A bird's eye view of the territory raised by Volcanick Explosions]. XXXII. [View of part of the island of Ischia called Lasco]. XXXIII. [View in the Valley called Atrio di Cavallo]. XXXIV. [View from the Sea of ... Capo'dell' Arco in Island of Ventotiene]. XXXV. [View of part of the inside of the Cone of the mountain of Somma]. XXXVI. [View of Mount Etna from Catania]. XXXVII. [View of the island of Stomboli]. XXXVIII. [Night view of a current Lava]. XXXIX. [Interior view of ... Fossa Grande].

XXXX. [View of a hollow road leading from the Grotta of Pausilipo]. XXXXI. [View of the first discovery of the temples of Isis at Pompeii]. XXXXII. [Specimens of Tufas]. XXXXIII. [Specimens of curious volcanic matter]. XXXXIV. [6 pieces of lava]. XXXXV. [7 pieces of Tufa]. XXXXVI. [7 pieces of volcanic matter]. XXXXVII. [Piece of Marble and calcarious stone]. XXXXVIII. [9 Specimens of curious stones]. XXXXIX. [12 Specimens of Lavas].

L. [12 Specimens of marble and other mixed stones]. LI. [Lava Scoriae and Pumice stones]. LII. [Vitrifications and other Volcanick productions]. LIII. [Productions of the Solfaterra].

LIV. [Stones of Crystal commonly called Gems of Mount Vesuvius].

RARE. A monumentally beautiful work, highly prized for its beautiful plates showing panoramas of Italian volcanoes, as well as minerals found around volcanoes. Text is in parallel columns of English and French.

Also on view are striking hand-colored etchings by Pietro Fabris that depict the eruptions of Mount Vesuvius and the fiery fields of the Campi Phlegraei. In The Eruption of Mount Vesuvius on August 9, 1779, Fabris dramatically records the spectacular views that drew 18th-century travelers to the region to sketch and to collect rocks, shells, and antique fragments found on the path of the flowing lava.

This huge tome describes volcanic areas around Pozzuoli to the west of Naples, Vesuvius, islands in the Bay and Mount Etna in Sicily. Campi Phlegraei was expensive to produce but provided clear, precise, more useful and much more detailed explanations of volcanic activity than had previously been published, and included Sir William Hamilton's own theories that volcanoes were creative rather than destructive forces. Published in both Italy and England it sold widely throughout Europe and was hailed as a masterpiece.

Sir William Hamilton, the diplomat and archaeologist, served as British envoy to the court of Naples from 1764-1800. It was at the end of his second year of residence in Naples that Vesuvius began a series of great volcanic eruptions, all of which he witnessed, in 1767, 1779 and 1794. He produced several treatises on earthquakes and volcanoes, including these observations on Vesuvius and Etna, published in 1776. The text - the first major contribution on volcanology since the Renaissance - is Hamilton's own, while the fifty-four hand-coloured plates which describe the activity of the

volcanoes are the work of Pietro Fabris. A spectacular night view of the eruption of Vesuvius on 11 May 1771 is shown here, the lava forming a beautiful cascade of fire; Hamilton is depicted drawing the original in the lower left corner. Knighted in 1772, Hamilton was a notable collector. He aided his friend, William Hunter, the original owner of this volume, in acquiring coins and medals from Italy. He was also the husband of Emma, Lady Hamilton, the mistress of Admiral Horatio Nelson.

Fabris was the sole distributor of the work, which was originally published at 60 Neapolitan ducats for Part I and Part II; the price of the Supplement is not recorded. Jenkins and Sloan state that 'some copies have bodycolour and gum arabic added to the etchings, perhaps indicating that they were de luxe versions'. Brunet III, 31 ('Ouvrage curieux et bien exécuté'); I. Jenkins and K. Sloan - Vases and Volcanoes (London: 1996), 'Catalogue' 43.

Reprint, 1962: *Campi Phlegraei. Osservazioni sui vulcani delle Due Sicilie comunicate alla Reale Società di Londra da Sir William Hamilton. Illustrate con tavole di Pietro Fabris.* A cura di G. Doria. Polifilo, Milano, 1962. 2°: [4], 146 p., 24 color plates. Limited reprint edition of Hamilton's famous *Campi Phlegraei*.

Italian translation, 2000: *Campi Flegrei : osservazioni sui vulcani delle Due Sicilie.* Prima traduzione italiana a cura di Antonio Tommaselli. Introduzione di Carlo Knight. Napoli, Grimaldi, 2000. 254 p., [54, 5] leaves of plates. Illustrative matter consists of reproductions of the 54 colored plates from the English edition of 1776, and 5 from the account of the eruption of Vesuvius in 1779, all by Peter [i.e., Pietro] Fabris. Includes reproduction of the original title pages. HAMLIN, Augustus Choate. (BORN: 28 August 1828; DIED: 1905) *American physician & businessman.*

Hamlin – also known as A. C. Hamlin – of Bangor, Penobscot County, Maine. Son of Elijah L. Hamlin. Born in Columbia, Washington County, Maine, 1829. Republican. Mayor of Bangor, Maine, 1877-78. Died in Bangor, Penobscot County, Maine, November 18, 1905. Interment at Mt. Hope Cemetery, Bangor, Maine.

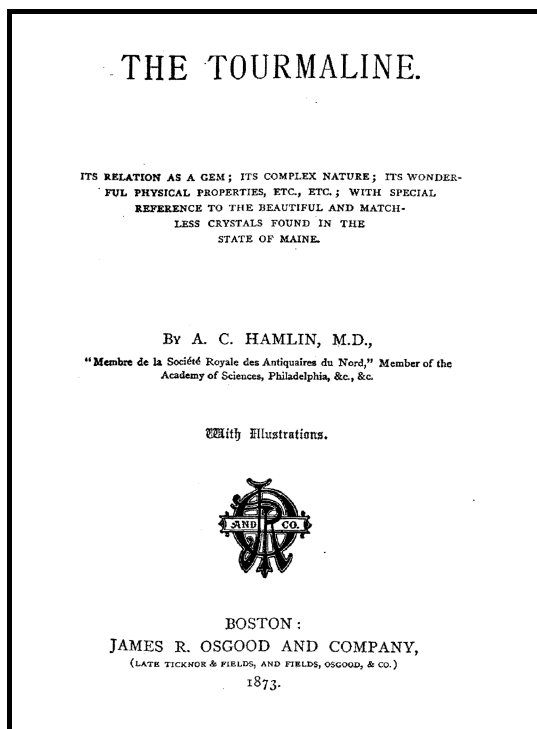

"Dr. A. C. Hamlin. - Dr. Augustus C. Hamlin, of Bangor, Surgeon-General of Maine, on the staff of Gov. Robie, is one of the most distinguished medical officers in New England. He served in the army during the entire war. He was entrusted with important commands in the Army of the Potomac, as Medical Director, and in the Army of Western Virginia. He was afterward promoted to one of the highest positions, that of Medical Inspector, in the staff of the regular army; and served with distinction in the Army of the South during the famous siege of Fort Wagner, and was afterwards assigned to the armies of the Southwest under the command of Major General [Henry] Thomas. Dr. Hamlin is a man of high scientific attainments, and is a member of numerous scientific societies, both at home and abroad. - N. Y. Medical Record."

2088. — English, 1891 [Second edition]. *Leisure Hours Among | The Gems | By | Augustus C. Hamlin | [...4 lines of titles and memberships...] | [...6 lines of quotation, signed Rabelais...] | Boston And New York | Houghton, Mifflin And Company | The University Press, Cambridge | 1891.*

12°: extra blank flyleaf supplied + [10], [13]-439 p., 2 chromolithographic plates.

VERY SCARCE. A leisure tour of information about various gemstones including the diamond, the emerald, the opal and the sapphire. Written in Hamlin's easy style myths, lore and scientific data associated with the stones is provided in the text about, and it is clear that Hamlin was acquainted with early

gemological books as they are cited within the text. The two chromolithographic plates are crude, especially in comparison with the author's other two works. They depict the Russian Imperial Crown of Empress and a doubly terminated blue sapphire from Ceylon that was held in the author's collection. According to Sinkankas (1993) the chapter on the emerald was reprinted in *Mineral Digest Magazine*, New York, 3, (Summer 1973), pp. 17-32, 7 color figs.

HISTORY OF MOUNT MICA, 1895

2089. — English, 1895.

The | History of Mount Mica | Of | Maine, U.S.A. | And | Its Wonderful Deposits of Matchless | Tourmalines | By | Augustus Choate Hamlin | [...4 lines of titles and memberships...] | [rule] | Bangor, Maine | Published by Augustus Choate Hamlin | 1895.

8°: [2], 72 p., 51 plates (43 chromo-lithographies), 4 illus.

VERY SCARCE. This privately published volume chronicles the history of an important, early American gemstone locality. Beginning with a chapter on the discovery of Mount Mica, the book continues with stories of other explorations, a description of the deposit, and diagrams showing where the major pockets were found. Of particular interest are the finely executed plates, showing various tourmaline crystals

collected over the years. These plates are among the best chromo-lithographes of minerals ever produced in the United States.

PAGE SIZE: 330 x 210 mm.

VERY RARE. A general history and description of the world, with special reference to the Turkish and Austrian dominions, and including a German version of the Koran. Sabin calls it "a sort of German Coryat" filled with a history of the wars between Hungary and Turkey. Particularly interesting are the notices of America (New France, Virginia, Florida, Mexico, Peru, Brazil, etc.) with a long report on the discoveries made by Drake in California. It has a series of curious representations of American natives, with detailed descriptions of their manners, customs, religion, etc. The work is heavily illustrated with some woodcuts nearly full page. A detailed description of

Hungary is richly illustrated with engraved plates. It is not clear if this work has any connection to mineralogy, but it is listed in Gatterer's bibliography.

The greater part of this work, which is a sort of German Coryat, is filled with a history of the wars between Hungary and Turkey, but it has also a special interest for the American collector, as it contains a series of fifteen curious representations of the aborigines of America, all with detailed descriptions of their manners, customs, religion, etc. We find among them representations of the natives of New-France, New-Nether-land, Virginia, a King of Florida, Californians, Peruvians, Chilians, Mexicans, etc. — *Sabin*

HARIOT, Thomas. (BORN: Oxford, England, 1560; DIED: London, England, 1621) *English explorer, navigational expert, mathematician, scientist & astronomer.*

Hariot was tutor to Sir Walter Raleigh, who sent him in 1585 to Virginia as surveyor with Sir Richard Grenville. Returning to England, Hariot wrote *A Brief and True Report of the New Found Land of Virginia* (1588), one of the earliest known large-scale statistical surveys. He made valuable contributions to algebra, introducing new symbols and notation. His *Artis analyticae praxis* appeared in 1631.

for victuall, building and other necessa- | rie vses for those that are and shalbe the planters there; and of the na- | ture and manners of the naturall inhabitants: Discoucred by the English Colony there seated by Sir Richard Greinuile Knight in the | yeere 1585. which remained vnder the gouernment of Rafe Lane Esqui- | er, one of her Maiesties Equiere, during the space of twelve monethes: at | the speciall charge and direction of the Honourable Sir | Walter Raleigh Knight, Lord Warden of | the stanneries; who therein hath beene fauou- | red and authorised by her Maiestie and | her letters patents: | Directed to the Aduenturers, Fauourers, | and Welwishers of the action, for the inhabi- | ting and planting there: | By Thomas Hariot; seruunt to the abouenamed | Sir Walter, a member of the Colony, and | there imployed in discouering. | [ornament] | Imprinted at London 1588.

4°: A-D⁴ E³; 19ℓ.; no pagination. Ornamental device (A1v).

CONTENTS: A1r, Title page.; A1v, Ornamental device incorporating the phrase "A More Et Virtue."; A2r-A2v, "Rase Lane on her Maiesties." (=preface).; A3r-E3v, Text.

EXTREMELY RARE. The science of North America began with Thomas Hariot and his *Brief and True Report of the New Found Land of Virginia*, a thin volume in quarto, printed at London in 1588. This narrative appeared in the English market in an attempt to entice others to emigrate to the recently founded colony of Roanoke in the Virginia colony. It is now one of the rarest and most precious works relating to America and is full of interest to the naturalist. Hariot's description of the Indians and their customs and beliefs, though strongly tintured with prepossessed ideas concerning them, is thorough and scholarly, and one of the fullest and most reliable of the early treatises upon the inhabitants of North America. In addition, Hariot gives a good description of the natural history of the territory surrounding the colony, included are descriptions of the plants, roots, berries, fish, animals and minerals that were readily available to the colonists. Among the mineral substances described are pyrite, clay, slate, pearls, and iron and copper ores. These are the earliest printed descriptions about mineralogical items found on the North American continent.

Hariot's Report is an abstract of a now-lost Chronicle written while he lived in Virginia in 1585-6. Although in the Report Hariot states his intent to publish the full Chronicle at a later date, it was never printed. The first edition of *A Briefe and True Report* was published in quarto in 1588. It does not appear in the Stationers' Register, nor does any printer's name or mark appear in the text. However, Randolph Adams identifies the printer's device on the title page as belonging to London printer Robert Robinson. There is no record of how many copies of the 1588 edition were printed, but the run is assumed to be small. The book

A BRIEF AND TRUE REPORT, 1588

2091. — English, 1588 [First edition].

A briefe and true re- | port of the new found land of Virginia: of the commodities there found and to be rayfed, as well mar- | chantable, as others

HARIOT

was intended for limited circulation among the wealthy to persuade them to invest in Sir Walter Raleigh's attempt to establish a permanent colony in the new world. Only six copies of the 1588 edition are known to survive.

Facsimile reprint, 1903: *A Briefe and True Report of the New Found Land of Virginia By Thomas Hariot Reproduced in Facsimile from the First Edition of 1588.* New York, Dodd, Mead & Co., 1903. 48 pp. (unpaginated). With an introduction by Luther S. Livingston, this edition was limited to 520 copies.

Facsimile reprint, 1951: *A Brief and True Report of the New Found Land of Virginia.* New York, The History Book Club, 1951. 12°: xvii, [3], [49] p.

A facsimile edition of the 1588 Quarto, with an introduction by the Randolph G. Adams. Cartographic paper over boards, boxed.

A BRIEF AND TRUE REPORT, 1590

2092. 2nd edition, 1590: [Contained within an elaborate engraved device containing two compartments, the text in the first compartment reads:] A brief and true report | of the new found land of Virginia | of the commodities and of the nature and man | ners of the naturall inhabitant Discovered by | the English colony there seated by Sir Richard | Greinuile Knight in the yeere 1585. Which rema | zined vnder gourernment of twelve moneths. | At the special charge and direction of the Honou | rable Sir Walter Raleigh Knight lord Warden | of the stanniers Who therein hath bene faouored | and authorised by her Maiestie | and her letters patents: | This fore booke is made in English | By Thomas Hariot seruanto to the abouenamed | Sir Walter, a member of the Colony, and there | employed in discourring | Cvm Gratia Et Privilegio Cæsma^{tr}s Specia^{lt} | [Continued in the second compartment:]

Francforti ad Moenvm | Typis Ioannis Wecheli, Svmtibus Vero Theodri | De Bry Anno CD D XC. | Venales Reperivntvr In Officina Sigismvnde Feir Abendii.

3 parts. 2°: (33, [1] p., [1] leaf of plates ; [6] p., [23] leaves of plates (some fold.) ; [8] leaves, [5] leaves of plates) : ill., map. Engraved title-page.

CONTENTS: [Part 1] [1-2], Title page, verso blank.; [3]-4, "To The Right | Worthie An Honov- | rable, Sir Vvalter Raleigh, | ..." (page shows an engraved coat of arms)—signed Theodorvs de Bry, April 1590.; 5-6, "To The Adven- | turers, Favorers, And | Vvelvvillers Of The En- | terprise For the Inhabitting." (=preface).; 7-33, Text, dated with printer's device on page 33, February 1588.; [1 pg], Blank.

[Part 2] [2 pgs], Title page, verso blank.; [2 pgs], "The Table | Of All De Pictv- | res Contained In | this Booke of Virginia. (=lists 23 plates).; [1 pg], "To the gentle Reader.;" [1 pg], Blank.

[Part 3] [2 pgs], Title page, verso "The trvve picture of one | Pict. I.;" [12 pgs], Text printed on reverse side of the plates.; [3 pgs], "A Table" (=index).; [1 pg], Errata.; [1 pg], "At Franckfort. | Inprinted By Ihon We- | chel, at Theodore de Bry, owne | cost and charges. | M D XC."

VERY RARE. The folio edition of 1590 was published simultaneously in English, French, German and Latin by Theodore de Bry, as part of his series on America. De Bry added a series of engravings based on watercolors by John White, a member of the 1585 colony and governor of the 1587 colony. Additional commentary about the natives, probably written by DeBry or White, accompanies the engravings.

Plates 1-23 have title: The true pictures and fashions of the people in that parte of America now called Virginia, discovred by Englishmen sent thither in the years of Our Lorde 1585 ... Translated out of Latin into English by Richard Hackluit. Diligentlye collected and draowne by Ihon White ... now cutt in copper and first published by Theodore de Bry ...

The last 5 plates have title: Som picture, of the Pictes which in the olde tyme dyd habite, one part of the great Britainne ...

"Also pub'd in French, Latin, and German, the latter 2 forming pt. 1 of de Bry's America series in those languages"—STC (2nd ed.)

Erstlich in engelländischer sprach beschriben durch Thomam Hariot vnd newlich durch Chirst. P. in teutsch gebracht. Jetz widerumb vbersehen vnd andermal in truck gegeben. Published : Gedruckt zu Frankfort am Mayn bey Matthes Becker in verlegung Dieterich de Bry seliger nachgelassene Wittwe vnd beyder söhne. 1600.

4°; A-G⁴ H⁶ I⁸ K⁶ [L]-[M]⁴ N³; 59l.; 31 p., 45l. including plates, double map. Engraved title page. Head and tail-piece.

VERY RARE. Translation by Christopher P— of *A briefe and true report of the new found land of Virginia* (London, 1588); the first edition of the German translation was published in 1590. Forms Part I of the

German edition of Theodore de Bry's collection of *Great voyages*. Illustrations engraved by de Bry from John White's drawings. Title-page for plates: Warhafftige Contrafacturen und Bebräuch der Inwohnern der jenigen Landschafft in America welche Virginia ist genennet worden von der Engelländern die auss Befelch dess Gestrengen Hernn Waltheri Raleigh ... Alles auss das aller fleissigst erkündigt vnd auff das artlichst Abcontrafeyt von Johann With ... Gedruckt zu Oppenheim bey Hieronymo Gallern, In Vorlegung Johann Theodor de Bry, anno 1619.

"Third edition. The title at the beginning is the second edition title." Imperfect: "Address to the Reader", between Plates I & II, missing. Plate XXIII, the *Étliche contrafeyt*, and the 5 plates with their explanations, occupying 9 leaves: missing."

HARKORT, Eduard. (BORN: 1797; DIED: August 1834 or 1835) *German geographer & mineralogist.*

Harkort entered the Freiberg Bergakademie in 1826, but in 1827 he emigrated to Mexico and probably became for several years the manager of the Santa Ana Smelter on the Rio Yavonio. The political turmoil swept him up however, and he joined the Mexican revolution in 1833, participating in the battles as Chief of the Corps of Engineers. Later he served as colonel of the artillery in the Texas army, dying of fever in Galveston.

Commission | bey Graz u. Gerlach in Freyberg. |
1827.

8°: x, 107 p., 3 diags.

RARE. Published at the expense of the author this single section dealing with blowpipe and assay tests for silver is all that appeared of a general work describing the assay art utilizing the blowpipe. In 1826 Harkort came to the Freiberg Bergakademie and was taught blowpipe analysis by JOHANN FRIEDRICH AUGUST BREITHAUP. He excelled at the work, developing a method of identifying potassium by blowpipe analysis in which the sample was mixed with nickel hydroxide and borax and fused. A characteristic blue coloration of the glass bead appeared in the presence of potassium.

In his *Die Probirkunst mit dem Löthrohre* he introduced quantitative analysis to blowpipe technique. Descriptions are given that provide procedures for testing the percentage of silver present in samples of minute size. In essence Harkort applies in miniature the ancient techniques that were used to test large quantities of silver ore in the muffle furnace. Unfortunately, no other sections of the book were published and innovations that Harkort might have brought to blowpipe art never appeared. However, he is credited with introducing the blowpipe assay scale as standard equipment.

HARTMANN, Carl Friedrich Alexander. (BORN: Zorge near Walckenriedt, Harz, Germany, 8 January 1796; DIED: Leipzig, Germany, 3 August 1863) *German mineralogist, mining expert & metallurgist.*

Hartmann was the son of a foundry official in the Oberharz, a prolific mining/mineral district in Germany. From these roots, he developed an early interest in mining and metallurgy, and through family connections secured a position as a student at the mining school in Clausthal, Austria. Although his studies were interrupted from 1813 to 1816 by a stretch in the German army fighting Napoleon, he resumed his education afterward, becoming an assistant to CHRISTIAN SAMUEL WEISS at the University of Berlin. In 1821, while still a student, Hartmann entered into a marriage that he could not financially support; therefore, he was obligated to leave the University and accept a bookkeeping position in Brunswick to provide for his family. His discretion and conscientiousness often meant being entrusted with important assignments. However, all spare time away from work or family was devoted to private study in the areas of geology, mining and mineralogy. His publications and translations in these fields brought him recognition and opportunities to travel throughout Europe.

HARTMANN

They also brought an appointment as commissioner of mines for Brunswick in 1825. Hartmann held membership in many scientific and technical societies, including Societät für die Gesamte Mineralogie of Jena and the Society for Mineralogy in St. Petersburg.

HAUSMANN

HAUSMANN, Johann Friedrich Ludwig. (BORN: Hannover, Germany, 22 February 1782; DIED: Göttingen, Germany, 26 December 1859) *German mineralogist*.

Hausmann received his formal education at the University of Göttingen, from which he graduated with

a Ph.D. in 1806. Afterward he made an extended one year geological tour of Denmark, Norway and Sweden. An appointment as General Inspector of Mines for Westphalia came in 1809, and in 1811, Hausmann accepted a position as professor of technology and mining at the Göttingen. Later he became professor of geology and mineralogy. In 1811, Hausmann was elected a member of the Königl. Societät der Wissenschaften in Göttingen, a body for which he served as secretary from 1840 to 1859. The mineral "Hausmannite" was named after him by W. Haidinger in 1831.

HAUSMANN

VERY SCARCE. The first attempt at applying spherical trigonometry to crystallographic description. In the preliminaries, Hausmann writes of being influenced by RENÉ JUST HAÛY's *Traité de Mineralogie* (1st ed., Paris, 1801). After some thought, he decided to apply the techniques of spherical trigonometry to the problem of crystal description, and the results of this research is reproduced in this work.

The text is divided into six sections. The first (pp. 2–20) give a short account of Haüy's theory of the structure of crystals. Each of the remaining five sections describe the crystallization of a single mineral. Described species are boracite (from Lüneburg, Germany), feldspar, barite, sphalerite and magnetite (from Ilfeld, Germany). For each mineral, information from Haüy's work is provided, and then Hausmann presents the application of his mathematical treatment to the crystallographic problem.

VERY SCARCE. Considered very valuable
as an introduction to mineralogy, Hausmann has
carefully compiled and digested everthing known
about mineralogical science, occasionally interweaving
the text with his own personal views. After a
short introduction to mineralogy, a long section
giving definitions of terminology and another covering
systematics is presented. A general index completes the
work.

VERY SCARCE. A thorough compendium classifying every known mineral species. Following the introduction is an overview of the classification system. The system Hausmann follows in this enterprise, was originally presented in his *Entwurf eines Systems der unorganisirten Naturkörper* (Cassel, 1809) [see above entry]. Only slight modifications have been made to the system from the earlier work. After this overview the more detailed descriptive mineralogy arranged according to the outline is presented. It is divided into the classes of combustibles, incombustibles, earths, oxides, acids and salts. Throughout the volumes Hausmann has applied careful and judicious judgement in expressing his own views and the mention of new discoveries and theories. Volume three concludes with two indexes. Each lists the described mineral species, one referencing names in German, while the other lists names in French.

PLATES: There are two folding plates at the end of part one and one plate at the end of part two, volume one. Each of them shows various crystal drawings. None are signed.

VERY SCARCE. Part one of this work, comprising the first volume, is a comprehensive, well thought out introduction to mineralogical science. In the forward, Hausmann writes that this new edition of his *Handbuch* is made necessary by the many changes in the science of mineralogy, particularly with regard to chemistry and crystallography. All parts of the science had undergone transformation and there had been new discoveries. After presenting a generalization of these events, Hausmann explains that these changes are digested into this introduction. In this first part, the basic concepts of the science are covered. Included is material on terminology, theoretical principles, nomenclature, and systematic classification. The second portion of the work was published in two volumes and consists of the descriptive mineralogy. As in the previous edition, all known mineral species are described in the classification devised by Hausmann.

The first volume was also issued under the title: *Versuch einer Einleitung in die Mineralogie* (Göttingen, 1828) [see entry below].

HAÜY

HAÜY, René Just. (BORN: St.-Just-en-Chaussée,
Oise, France, 28 February 1743; DIED: Paris, France,
1 June 1822) *French mineralogist & crystallographer.*

Born to a poor family, Haüy received a good classical
and theological education by means of a scholarship to
the Collège de Navarre in Paris. In 1770, after he was
ordained a priest, Haüy was assigned a teaching post at
the Collège Cardinal Lemoine. There he became interested
in botany, but after attending DAUBENTON's lectures on
mineralogy he turned his attention to mineralogy. Haüy
was elected an associate member of the Paris Academy of
Science in February 1783. In 1793, after the publication of
his *Essai d'une Théorie sur la Structure des Cristaux* (Paris,
1794), Haüy left teaching to devote his full attention to
mineralogical studies. During the French revolution, he
placed himself in jeopardy by refusing to swear the oath
required by the Civil Constitution of the Clergy. He was
arrested, but through the efforts of his former student,
E. GEOFFROY SAINT-HILAIRE, Haüy was released the night
before the others prisoners were executed. In 1793 he was
appointed to the Commission of Weights and Measures.
Also, in 1793, he attempted unsuccessfully to gain the
release of A. LAVOISIER. In 1795, he was appointed an
instructor of physics and mineralogy at the École des Mines
(School of Mines). After the death of D. DOLOMIEU, he
succeeded to the post of professor of mineralogy at the
Muséum d'Histoire Naturelle (Museum of Natural History),
where he greatly enlarged the mineral collection. In 1809,
Haüy also assumed the newly created chair of mineralogy
at the Sorbonne. He retained these posts until his death.

Haüy's own 12,000 specimen mineral collection was
sold in 1823 to the Duke of Buckingham. In 1848, it was
returned to France when the Jardine des Plantes purchased
it from the Duke's heirs. Today, over 6,000 specimens
labeled in Haüy's handwriting have been identified.

ESSAI D'UNE THÉORIE, 1784

2118. — French, 1784.

Essai | d'une Théorie | sur la Structure | des Crystaux, | Appliquée | a plusieurs genres de substances | cristallisées; | Par M. l'Abbé Haüy, de l'Académie Royale des | Sciences, Professeur d'Humanités dans l'Université de | Paris. | [ornament] | A Paris, | Chez Gogué & Née de la Rochelle, Libraires, | Quai des Augustins, près le Pont Saint-Michel. | [double rule] | M. DCC. LXXXIV. | Sous le Privilege de l'Académie.

8°: π^4 A-O⁸ P⁴ Q²; 122 ℓ .; [8], [1]-236 p., 8 folding plates, showing many figures of crystals both dissected and whole. PAGE SIZE: 198 x 127 mm.

CONTENTS: [2 pgs], Half title page, "Essai | d'une Théorie | sur la Structure | des Cristaux.," verso blank.; [2 pgs], Title page, verso blank.; [2 pgs], "Avertissement.;" [1 page], "Table | Des Articles.;" [1 pg], "Extrait des Registres de l'Académie Royale | des Sciences, du 26 Novembre 1783.;" [1]-46, "Introduction.;" [47]-230, Text.; [8 folding plates]; 231-236, "Table | Des Matieres."

VERY SCARCE. Haüy's first printed book, this work was instrumental in establishing a solid foundation on which modern theories of crystal structure rest. In it, Haüy brought together the advances in crystallography made by Romé de l'Isle, Bergman and others into a

coherent structural theory, based on the structural unit, the "molecule constituante" (later renamed by him to "molecule integrante"). Haüy's model depicted crystals as built up out of these molecular units which were polyhedral in form. Haüy also theorized a common "nucleus" or "primitive form" for all crystals of the same "species." This primitive form was often revealed by cleavage of a crystal symmetrically along its angles and edges. Haüy's theory of crystal structure changed little in its essentials during the remainder of his career, which went on for almost forty years after the publication of the *Essai*.

After the introduction, the text is divided into ten articles, the first two of which describe the structure of crystals based upon primary and secondary forms. The next seven articles apply the theory to various minerals, while the final chapter gives observations and conjectures on the formation of crystals.

"Avertissement. | Par le C.en Charles Coquebert."; [7]-
286, Text.; Plates XX-XXII.; [1]-14, "Table Des Matières |
De l'Extrait du Traité de Minéralogie | Rédige par le C.en
Haüy."

PLATES: Comprise three engravings labelled XX-XXII
and signed Cloquet Sculp. that were originally issued in the
Journal des Mines, 29, no. 5.

VERY RARE. Prior to the publication of his great
work, *Traité de Minéralogie* (Paris, 1801) and perhaps
at the urging of the French revolutionary council, Haüy
published an extract of the first volume in the *Journal
des Mines* [see 29, ?????]. It apparently generated
enough interest that this very scarce book containing
a reprint of that article and the accompanying 3 plates
was prepared from it. In the advertisement, Coquebert
informs the public that Citizen Haüy is totally engaged
in completing the manuscript of his great work that will
contain many new observations about crystallography
and mineralogy as outlined in this *Extrait*.

PLATES: Comprise 86 engravings showing mostly
crystal drawings and diagrams and numbered I to
LXXXVI. They are signed Cloquet Sculp. These are the
same as issued with the octavo edition.

EXTREMELY RARE. This is a different earlier issue
of the complete text of the *Traité de Minéralogie* in
a quarto sized volume. The text has been reset to
utilize the larger paper size, and based on the Errata,
this appears to be an earlier issue of the *Traité*, which
perhaps for economic reasons of paper and binding
material was reduced in size to the more common octavo
issue. The Freilich Sale Catalog calls this a large paper
issue, which it is not. The text is completely reset,
rather than being printed on a larger paper size stock.
So far only four copies of this issue has been located.

SCARCE. This work is arguably the most influential work written in the historical development of mineralogy and crystallography. It far superseded any previous attempt to create a mineralogical classification. It is a work of comprehensive insight, and much of it, written in literary fluency, repays the casual curiosity of mineralogists and historians of science. Haüy's magnum opus containing his theory of crystal structure and his system of mineral classification. Haüy's law of decrement states led his successors directly to the law of rational indices, one of the fundamental laws of modern crystallography. This work was immediately recognized as the most important offered by France to the science of mineralogy, one that placed the country at the forefront of the European nations in this science. In it the author makes crystallography the basis of his determination of mineral species, relegating the data derived from chemical analysis to second rank. The mathematical precision with which the crystallographic facts could be presented provided an absolutely exact basis for mineralogy which it had lacked before that time, as the correctness of the crystallographic determinations could always be proved by rigid geometrical tests.

In his mineral classification, Haüy believed that chemistry played a secondary rôle to crystallography in determining species groups. The work also contains Haüy's discovery of piezo-electricity.

The work opens with a Preliminary Discourse that assumes the character of a literary dissertation, generally philosophic, frequently eloquent, and always dignified and learned. Haüy first draws comparisons between the study of minerals and the obvious charms of zoology and botany, with their living subjects to study. He then explains the mysteries of the science. The polyhedral shape of crystals for example can bring mathematical precision to the science. Haüy notes the easy separation of natural substances into stones, salts, bitumens, and metals, the quick recognition of crystals, the artificial and purely empirical classification of minerals, by their external characters, combined with a few simple reactions, as the effervescing of carbonates, the later systems of Cronstedt, Bergman, Born, Kirwan, etc., when analysis usurped the place of mere inspection. He emphasizes the importance of distinguishing varieties, as in calcite, a conviction he incorporated into his description of the minerals. He also illustrates the value of analysis in alluding to the mineral smithsonite that was first regarded as a zeolite, later as heavy spar, and then shown conclusively by chemical analysis to be a salt of zinc.

Espèces."; [11]-27, "Nomenclature des Cristaux."; 28-54,
"Tableaux des Mesures d'Angles, ..."

RARE. A considerably revised, corrected and enlarged
version of the first edition. It provides a general treatise
on mineralogy taking up half of the first volume, with the
remainder being the beginning of a systematic descriptive
mineralogy which extends through volume four. The last
volume also contains an index to the entire work and a list
of subscribers. The atlas plates show some mineralogical
apparatus and many hundreds of crystal drawings.

CONTENTS: [2 pgs], Half title page, "Tableau Comparatif | des Résultats | de la Cristallographie | et de l'Analyse Chimique, | Relativement à la Classification des Minéraux." verso blank; [2 pgs], Title page, verso list of works by Haüy; [i]-xxxiv, "Introduction."; xxxv, "Explication des abréviations employées dans ce Tableau comparatif."; xxxvi-xl, "Table des espèces décrites dans cet ouvrage."; [xli]-xlvi, "Table des noms Français."; [xlix]-lvi, "Table des noms allemands."; [1]-120, "... Première Partie. Distribution méthodique des Espèces minérales déterminées principalement à l'aide de la Cristallographie."; [121]-312, "Seconde Partie. Notes relatives aux Résultats de l'analyse et à différents points de philosophie minéralogique."; [At end], 4 folding plates.

SCARCE. In 1809, Haüy issued his *Tableau Comparatif*, which had the stated objective that it would give those who had followed his course of lectures a complete tabulation of his mineralogical methods, updated to include the discoveries and observations the science had gained since the publication of his *Traité de Minéralogie* (Tableau, p. i).

Yet the *Tableau Comparatif* was more than a mere compendium of recent mineralogical statistics. Since the publication in 1801 of the *Traité*, Haüy's theories had come increasingly under attack. Specifically, his fundamental concept that every definite crystalline form or "molecule integrant" is characteristic of only one substance of definite chemical composition, and conversely that every substance of definite chemical composition can occur in only one definite crystalline form, drew Haüy into the Proust/Berthollet controversy about fixed versus variable proportions in chemical compositions.

Haüy's insistence upon the "molecule integrant" being the unique, fixed criteria for determining every mineral species lead him to implicitly accept the chemical law of fixed proportions long before Proust had declared it (Hooykaas, 1952). This position was in direct opposition to Berthollet, who believed that chemical composition was not fixed as Proust and Haüy claimed, but rather was of a variable nature. Therefore, in his 1803 *Essai De Statique Chimique*, Berthollet assailed Haüy's ideas about fixed mineral species in an elaborate note (*Essai*, 1, 433-449; Hooykaas, 1952). In answer to Berthollet's criticisms Haüy wrote the *Tableau Comparatif* which defended his position on the "molecule integrant" and its importance in uniquely defining a mineral species.

The book is divided essentially into two parts. The first is a "Methodical distribution of mineral species principally determined with the aid of crystallography," while the second is titled, "Notes relating to the results of the analyses and other points on the philosophy of mineralogy."

TRAITÉ DES CARACTÈRES PHYSIQUES, 1817

2128. — French, 1817.

Traité | Des Caractères Physiques | Des | Pierres
Précieuses, | Pour Servir A Leur Détermination
| Lorsqu'elles Ont Été Taillées, | par M. l'Abbé
Haüy, | [...10 lines of titles and memberships...] |

HAÜY

[tapered rule] | Paris, | M^{ve} Ve Courcier, Imprimeur–Libraire, | rue du Jardinot, quartier Saint–André–des Arcss. | 1817.

8°: π^8 1-17⁸ 182; 146 ℓ .; [i]-xvj, [i]-xxij, [1]-253, [1] blank p., 3 folding plates. PAGE SIZE: 218 x 132 mm. uncut.

CONTENTS: [i-ii], Half title page, “Traité | Des Caractères Physiques | Des | Pierres Précieuses,” verso “De L’Imprimerie De Mme Ve Courcier.”; [iii-iv], Title page, verso blank.; [v]-xvj, “Table Alfabétique | Des Matières | Contenues Dans Ce Traité.”; [i]-xxij, “Introduction.”; [1]-253, Text.; [1 pg], Blank.; [At end], 3 folding plates.

PLATES: The work contains 3 folding engraved plates numbered Pl. I–III. The depictions show apparatus and crystal drawings. All are signed Cloquet Sculp and are 218 x 280 mm.

VERY SCARCE. A landmark book in the science of gemology, described by Sinkankas (1994) as “the first determinative gemology worthy of the name.” This book marks a transition from earlier descriptive lapadaries to works based on scientific studies. The volume describes the crystallography and physical properties of various gemstones, and characterizes how these qualities might be used in identifying a stone, whether rough or cut. To facilitate this an identification table is provided. The three plates show various crystal forms, a Nicholson’s hydrometer (used for measuring specific gravity) and other laboratory apparatus for testing electrical properties.

UEBER DEN GEBRAUCH PHYSIKALISCHER, 1818

2129. German transl., 1818: Ueber | den Gebrauch | physikalischer Kennzeichen | zur Bestimmung | geschnittener Edelsteine. | [tapered rule] | Von | Herrn Ritter Haüy. [sic] | Uebersetzt durch | Karl Cäsar Ritter von Leonhard. | [tapered rule] | Leipzig, 1818. | Bey Wilhelm Lauffer.

[FIRST SECTIONAL TITLE PAGE:]

Ueber | den Gebrauch | Physikalischer Kennzeichen | zur Bestimmung | der | Edelsteine. | [tapered rule] | 1.

[SECOND SECTIONAL TITLE PAGE:]

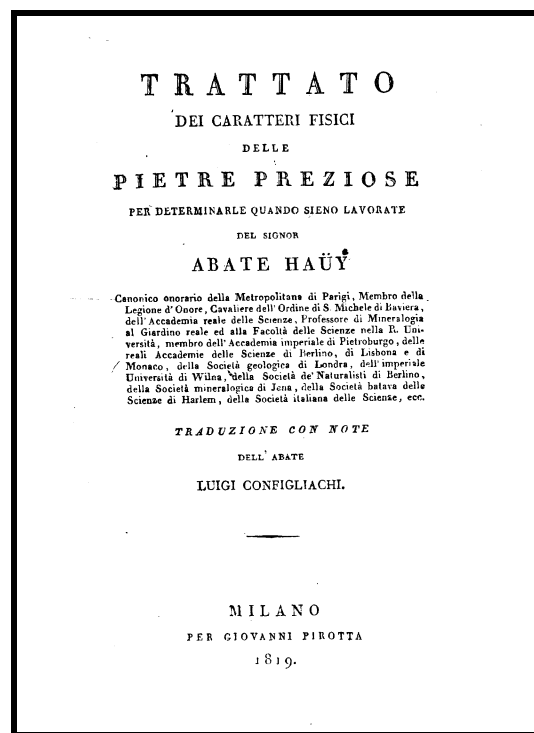

Uebersicht | der | Edelsteine | mit Angabe ihrer bezeichnenden Merkmale.

8°: π^2 1-3⁸ 42; 28 ℓ .; [4], [1]-51, [1] blank p. PAGE SIZE: 210 x 135 mm. uncut.

CONTENTS: [2 pgs], Title page, verso blank.; [2 pgs], Preface, dated 1 January 1818.; [1], Sectional title page.; [2], Blank.; [3]-30, Text.; [31], Sectional title page.; 32-51, Tables.; [1 pg], Blank.

RARE. First separate edition, translated by CARL CÄSAR RITTER VON LEONHARD. This work first appeared in French as “???” in the *Annales du Muséum d’Histoire Naturelle* 3 (1817?), p. 353. This is the work’s only separate appearance and contains many remarks added by the translator. It describes the determination of the physical characters of precious stones.

Sinkankas (1994) believes this to be an abridged translation of Haüy’s work on precious stones.

TRATTATO DEI CARATTERI FISICI, 1819

2130. Italian transl., 1819: Trattato | Dei Caratteri Fisici | Delle | Pietre Preziose | Per Determinarle Quando Sieno Lavorate | Del Signor | Abate Haüy | [...10 lines of titles and memberships...] | Traduzione Con Note | Dell’ Abate | Luigi Configliachi. | [tapered rule] | Milano | Per Giovanni Pirota | 1819.

8°: *6 B⁸ 1-14⁸ 152; 132 ℓ .; [i]-xxxvi, [1]-227, [1] p., 3 folding plates. PAGE SIZE: 220 x 145 mm.

CONTENTS: [i-ii], Half title page, "Trattato | Dei Caratteri Fisici | Delle | Pietre Preziose," verso blank.; [iii-iv], Title page, verso blank.; [v-vi], "Avviso | Del Traduttore."; [vii-xvii], "Tavola Alfabetica."; xviii, "N.B. Le note segnate coi ..."; [xix-xxxvi], "Introduzione."; [1]-227, Text.; [1 pg], Errata.; [At end], 3 folding plates.

PLATES: The work contains 3 folding engraved plates, numbered T. I-III and signed G. Pezze inc. These are new versions of the original French impressions.

RARE. Translation by Luigi Configliachi [see note below] of *Traité des Caractères Physiques des Pierres Précieuses* (Paris, 1817). The text begins with an advertisement from the translator, followed by an alphabetical index to the mineral species treated in the text. The premission of the printer precedes the introduction. The text then presents the species in Haüy's arrangement.

Luigi [Pietro] Configliachi. (BORN: 1767; DIED: 1864) Italian mineralogist.

[BIOGRAPHY NEEDED]

EBENMAASSGESETZ, 1819

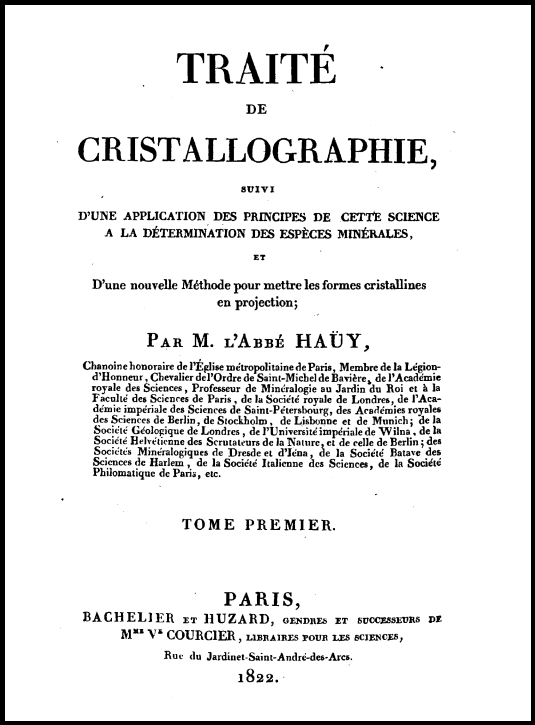

2131. — German, 1819.

Haüy's | Ebenmaassgesetz | der | Krystall-Bildung. | Uebersetzt | und | mit Anmerkungen begleitet | von | Dr. F.C. Hessel, | ordentliches auswärtiges Mitglied der mineralogischen | Societät zu Jena. | [rule] | Mit einer Vorrede | von | C.C. Ritter von Leonhard. | [wavy rule] | Frankfurt am Main, | in der Hermannschen Buchhandlung | 1819.

8°: xvi, 115 p., 2 colored plates.

RARE. This work deals with the theorized mechanism for how crystals develop symmetry. It is a translation by JOHANN FRIEDRICH CHRISTIAN HESSEL, with a forward by CARL CÄSAR RITTER VON LEONARD of "Mémoire sur une loi de Cristallisation, appelée loi de Symétrie," *Mémoire du Muséum d'Histoire Naturelle*, 1 (1815), 81-101, 206-25, 273-98, 341-52. This paper was also reprinted in *Journal des Mines*, 37 (1815), 215-35, 347-69, & 38 (1816), 5-34, 161-74.

plates numbered 1-84.

VERY SCARCE. Haüy's last work containing the
culmination of his studies in crystallography. It greatly
enlarges the number of species described, but the theory
first published in his *Essai d'une Théorie* (Paris, 1784)
remains essentially the same. Haüy also recognizes
hemitropical crystals (so named by him, but first
observed by Romé de l'Isle).

HEBENSTREIT, Johann Ernst. (BORN: Neustadt-
Orla, Germany, 15 January 1702; DIED: Leipzig,
Germany, 5 December 1757) *German physician,
botanist & natural historian.*

From 1719, Hebenstreit studied the subjects of
medicine and natural history at the Universities of Jena
and Leipzig. At Leipzig in 1728 he was awarded the
degree of master of philosophy, and in 1730 he graduated
as a doctor of medicine based upon the dissertation, *De
viribus mineralium et mineralium medicamentosis* (Leipzig,
1730). While at Leipzig, Hebenstreit had come under
the influence of August Quirinus Rivinus [1652-1723], who
introduced him to the field of botany. Upon his graduation,
Hebenstreit found a position at the royal botanical gardens
of the city. On behalf of Saxon King August II, Hebenstreit
along with five companions, including Christian Gottlob
Ludwig [q.v.], travelled from 1731 to 1733 on an extended
expedition throughout North Africa. Their task was
to collect natural history specimens as well as living
animals, and bring them back to Leipzig. Upon the
expeditions return, Hebenstreit took over as ordinary
professor of physiology at the University of Leipzig. When
the opportunity arrived, he also moved in succession to
the professorships of anatomy and surgery, pathology and
therapy.

Hebenstreit published works deal mostly with the
anatomical and physiological aspects of medicine. His
writings are based upon practical experience, and his
Anthropologia Forensis (Leipzig, 1751) is among the first
publications to show a connection between forensic
medicine and the law. Hebenstreit was also interested
in ancient medicine as it compared to his contemporary
knowledge. He authored *Erklärung Greich. Wörter von
Krankheiten des menschlichen Körpers* (1st ed., Leipzig,
1751), which is a glossary explaining Greek words that
describe diseases of the human body. In natural history,
Hebenstreit attempted to improve the system of plant
classification by dividing plants based upon their fruits,
and he devised a system for crustaceans and fish after their

outer organs. Hebenstreit was voted a membership to the
Leopoldian Akademie in 1731.

[Preface to Christ's work]; [1]-34, Text in double column in Latin and German.

VERY SCARCE. A lavish book, describing and illustrating the minerals, fossils, gems and other objects of natural history contained in the collection of Johann Christoph Richter [see note below]. Richter had studied in his youth philosophy and literature; however, he succumbed to family wishes and pursued a successful career in business, which included dealing with glass making sands and coloring agents. Curious about the origins of the products he sold, Richter traveled to the mines that produced the agents. There he had his first introduction to the mineral specimens that he would spend the remainder of his life collecting. Richter wrote in the preface to this book: "The collection ... grew from day to day, to such an extent that it became necessary to sort the specimens into categories and arrange them on shelves and in display cabinets. As the number of shelves kept growing, my love for these things grew also, so that after a while, whatever time I had left over from the management of my personal or business affairs, I dedicated to their study and care" (Wilson (1994). Fortunately, Richter decided that some record of his collection and its organization should be preserved so that others might learn from his experience. For this purpose the services of Johann Ernst Hebenstreit were

retained to write the systematic catalog and Christian Friedrich Boëtius [see note below] to illustrate the book with faithful engravings. The resultant book is *Mvsevm Richterianvm*.

The volume begins with a dedication to Saxon Prince Friedrich Christian and Richter's preface describing the development of his collection and the preparation of the catalog. Following this is a detailed discussion of the development of natural history collecting and systematic mineralogy. For this Hebenstreit draws upon earlier authorities and books by Pliny, Dioscorides, Aldrovandus, Henckel, Agricola, Gesner, Woodward, Linnaeus, Theophrastus, Caesalpinus, Mercati, etc. Ordered by the principal metal contained, the minerals and ores are then methodically discussed. Each metal is covered in its own chapter, with the different mineral species and varieties that contain the metal listed underneath. Other chapters cover the sulfides, bitumen, salts, clays, "earths," quartz, and the gems. In each chapter after the systematic presentation, Richter's specimens are described with notes about association, habit and locality. Following the large mineralogical section of the work, other objects of Richter's collection are described. Included are marble, fossils, and preserved biological specimens. Finally, appended at the end and illustrated by three plates is a dissertation concerning the antique gem cameos contained in Richter's collection by Johann Friedrich Christ [see note below]. This work is titled: *Mvsei Richteriani Dactyliotheca Gemnas Scalptas Opere Antiquo Plerasque Complexa Interprete Ioh. Frider. Christo*. It follows the main treatise by Hebenstreit and may have in its history been separately issued as its own book. For further information on Christ and this work see, Sinkankas, J.S. (1993): nos. 1297 and 1831.

A significant feature of *Mvsevm Richterianvm* are the splendid plates. These include a large folding engraved frontispiece showing the interior of the museum, a full page portrait of Richter engraved after a 1739 painting by M. Bernigerothi and thirteen other plates realistically depicting 114 fine mineral specimens from Richter's collection. Two states of these plates exist. The most common issue are the uncolored which for their early date outshine many black and white mineral illustrations of later centuries. The second much rarer state is when the plates are superbly colored. More than likely, these were colored using the specimens themselves as models because very few colored mineralogies show the realistic, 3-dimensional quality present in almost everyone of the illustrations. Unfortunately, no information has been uncovered pointing to the colorist who tinted the plates, but with their skill, they created what is perhaps the finest hand-colored mineralogy.

Facsimile reprint, 1990: Prepared by The Mineralogical Record, Tucson, Arizona.

Johann Friedrich Christ. (BORN: 1701; DIED: 1756)
German philosopher & poet.

Johann Christoph Richter. (BORN: 1689; DIED:

HEDDLE

1751) *German banker & mineral collector*. A wealthy Leipzig banker, he built a large mineral collection of 2,309 specimens, plus gems, rocks, fossils and botanical examples for a total of 5,631 items in all. The museum was sold in 1751, with a few specimens being acquired by JOHANN HEINRICH LINCK.

Christian Friedrich Boëtius. (BORN: Leipzig, Germany, 1706; DIED: Dresden, Germany, 1782) *German copper engraver*. Boëtius was born the son of a bookseller and auctioneer. At an early age he was apprenticed to the Leipzig goldsmith Johann Friedrich Lauch. Boëtius was further artistically trained at the Zeichenakademie in Leipzig, where he remained four years. His highly developed skill as a copper plate engraver soon provided him with a steady flow of customers in Leipzig; however, sometime after 1736, Boëtius accepted a position in Dresden as court etcher and instructor at the local art academy. He remained there until his death.

HEDDLE, Matthew Forster. (BORN: Melsetter, in Hoy, Orkney, Scotland, 1828; DIED: Edinburgh, Scotland, 19 November 1897) *Scottish chemist & mineralogist*.

Heddle graduated with an M.D. from the University of Edinburgh in 1851. When he attended the University of Edinburgh, Heddle took R. JAMESON's lectures on natural history topics. While he was practicing medicine in Edinburgh, Heddle became interested in mineralogy and geology, particularly as they related to his native land. Around 1856, he was appointed assistant professor of chemistry at the University of St. Andrews. He became a full professor in 1862, and continued to teach until his retirement in 1885. It is recorded that Heddle used a portion of his income to purchase equipment and supplies for the mineralogical laboratory at St. Andrews. Heddle decided early in his career to focus his considerable energy on the study of mineralogy in Scotland. To this purpose, he made many excursions throughout the country, collecting minerals. Even the most remote deposits were accessible to his unflagging energy and ingenuity. As a consequence, Heddle amassed a large collection of minerals and agates,

HEDDLE

particularly rich in Scottish localities. The collection is now housed in the Royal Scottish Museum, Edinburgh. Heddle was elected a Fellow of the Royal Society of Edinburgh and president of the Geological Society of Edinburgh in the year 1851. He was also elected President of the Mineralogical Society of Great Britain in 1879.

The | Mineralogy Of Scotland | By The Late | M. Forster Heddle, M.D., F.R.S.E. | Emeritus Professor Of Chemistry, St Andrews | Edited By | J.G. Goodchild | H.M. Geological Survey, F.G.S. | Vol. I. [-II.] | Edinburgh | David Douglas, 10 Castle Street | 1901 | [All Right Reserved].

2 vols. [VOL 1] 8°: [i]-li, [1]-148 p., frontispiece portrait of Heddle, 51 plates, numerous text figures; [VOL 2] 8°: [1]-192 p., plates 52-103, numerous text figures. PAGE SIZE: 246 x 142 mm.

CONTENTS: [Vol 1] [i-ii], Half title page, "The | Mineralogy Of Scotland," verso "Printed by Neill and Company, Limited, Edinburgh | for | David Douglas | ..."; [Frontispiece], Portrait of Heddle.; [iii-iv], Title page, verso blank.; [v], Dedication to Mrs. Heddle.; [vi], Blank.; [vii]-ix, "Preface."—dated 30 January 1901.; [x], Blank.; [xi]-xiii, "Memoir Of Dr Heddle | By Alexander Thoms."; [xiv], Blank.; [xv]-xvi, "Contents Of Volume I."; [xvii]-xviii, "List Of Illustrations To Volume I."; [xix]-xxiii, "Systematic List Of Minerals."—by J.G. Goodchild.; [xxiv]-xxvi, "Alphabetical List Of Minerals."—by J.G. Goodchild.; [xxxvii]-xlix, "Scottish Pseudomorphs | By James Currie, M.A."; [xlix], "Index Of Scottish Palaeosomatic Minerals." [pseudomorphs]; [li], "Scottish Minerals Arranged Under Counties."; [1]-148, Text.; [At end], 51 plates numbered I-LI.

[Vol 2] [i-ii], Half title page, "The | Mineralogy Of

THE MINERALOGY OF SCOTLAND, 1901

Scotland," verso "Printed by Neill and Company, Limited, Edinburgh | for | David Douglas | ..."; [Frontispiece], "Coroneted Pyrites."; [iii-iv], Title page, verso blank.; [v]-vi, "Contents Of Volume II."; [vii]-viii, "List Of Illustrations To Volume II."; [Plate] "Orthoclase."; [1]-192, Text.; [193]-212, "Supplement."; [213]-247, "Synoptic Index To Scottish Mineral | Localities."; [248], "Errata."; [At end], 52 plates numbered LII-CIII.

VERY SCARCE. This unsurpassed compilation of Scottish minerals is among the best topographical mineralogies yet written. It was the product of the author's lifelong desire to publish a comprehensive work on the mineralogy of his homeland, but at his death the manuscript remained unfinished. The notes were left to Alexander Thoms, who placed the work of completion in the competent hands of the mineralogist John George Goodchild [1844-1906].

Goodchild's responsibility was to sift through the mass of detail recorded in the notes and with as little alteration as possible create the two volumes of the present work. It must have been difficult. Many of the localities were laborious to identify, having been phonetically spelt by Heddle in his early journeys and not existing on any maps. Further, it was not clear what specimens related to the many figures the author had created, or what is the meaning of their symbols. Heddle was a competent draughtsman, and there are no less than 103 plates each containing about eight figures that accompany the two volumes. However, many of these figures come from other sources, having been redrawn by Heddle, with no clear indication as

to their value in the identification of Scottish species. Goodchild not knowing the importance of the drawings, decided to include them all.

In addition to the plates, a remarkable feature of the book are a number of beautiful and elaborate stereographic and gnomonic projections drawn by Wilbert Goodchild. The only book prior to *The Mineralogy of Scotland* that had included such illustrations was Alfred Louis Olivier Legrand Des Cloizeaux's [q.v.] *Manuel de Minéralogie* (2 vols. & atlas, Paris, 1862-93), and they are not as elaborate as those in the present work.

Volume one begins with Thoms memoir on the life and accomplishments of Heddle, and progresses through systematic and alphabetical lists of Scottish minerals. James Currie has added a complete list of Scottish pseudomorphs. Concluding the introductory material is an index of minerals arranged according to the counties where they are found. The bulk of the work is then presented. This is a descriptive mineralogy arranged upon a chemical classification of the just over 200 mineral species found in Scotland. Every locality where the species is known to occur is enumerated. The description includes the kind of rock in which the mineral occurs, and a statement of other associated species. In addition, an account of the crystalline forms and of the physical and chemical properties is given for each species. Under some minerals can be found an interesting historical commentary. Goodchild has also added greatly to the work's value by the inclusion at the end of a very complete synonymic index of locality names, in which he has taken great pains to give the exact situation of the place.

HEINITZ, Friedrich Anton von. (BORN: Dröschkau, Germany, 14 May 1725; DIED: Berlin, Germany, 15 May 1802) *German statesman & mining expert.*

Heinitz (or Heynitz) was a member of an important aristocracy family in Saxony. He attended the Universities of Dresden and Freiberg, where he studied mining and smelting. In 1765, he was put in charge of mining, smelting, and forestry in Saxony and immediately founded the Bergakademie Freiberg, now the oldest mining school in the world. He is considered as the reformer of the mining

HEINRICH

industry of Braunschweig, having reorganized the mining and metallurgical operations of Prussia.

VERY SCARCE. The first portion of the text

describes minerals, rocks, stones, ores, etc. while the second part provides descriptions of techniques in assaying and metallurgy. Typical of the period, all types of mineralogical objects are described including such odd materials as fossils, figured stones, precious and semiprecious gems and other curiosities derived from the earth. Also included are recipes for manufacturing colored glasses and discussions of artificial gemstones. Basic facts are included in the descriptions such as localities, physical properties and uses in medicine and industry.

Christian von Hellwig published this work under the pseudonym Valentin Kräutermann.

SCARCE. Christian von Hellwig published this work under the pseudonym Valentin Kräutermann. The text describes all aspects of mineralogy but with special attention paid to the medical benefits. The author describes historic uses of minerals and provides quite detailed commentary on specific species. These include the noble metals of silver and gold as well as the technological materials of copper, tin, lead, and zinc. Procedures for assaying ores are outlined and information on how to overcome purity problems are given. The frontispiece shows a woodcut scene of a mine with wench and ore hoist in the foreground and a scenic view in the background.

The text is divided into two parts. The first treats metals and their associated minerals and covers, gold, silver, copper, iron & steel, zinc, lead and mercury. The second provides methods for distinguishing between gold and silver by means of acids, heating, and combinations with other fluxes and compounds like antimony, lead and copper. Another section explains how to differentiate between gold and silver and the other metals like copper, iron, zinc, lead and mercury. Methods and procedures for assaying various ores are then presented.

HENCKEL, Johann Friedrich. (BORN: Merseburg,
Germany, 1 August 1678; DIED: Freiburg, Germany, 26
January 1744) *German mining expert.*

The son of the town physician, in 1698, Henckel
enrolled at the University of Jena to study theology;
however, he switched to medicine and in a few years
transferred to Dresden, where he opened a medical practice,
without obtaining an M.D. In 1711, he resumed his medical
studies at the University of Halle, taking an M.D. under
G.E. STAHL. Subsequently, Henckel relocated to the mining
town of Freiberg in Saxony. There he practiced medicine
for 18 years, becoming district physician in 1718 and
town physician and mine physician in 1721. For pleasure,
Henckel provided courses in chemistry and preformed
chemical experiments. This led to his publication of
several works important works [described below]. In 1730,
under the patronage of an influential noble, he resigned his
post. Eventually he was appointed councilor of mines, and
was able to establish a large laboratory in Freiberg. There,
he resumed his annual course in metallurgical chemistry,
teaching six students of a time. Among his distinguished
pupils were A.S. MARGGRAF and M.V. LOMONOSOV. This
course became renowned throughout Europe, and was
probably instrumental in the founding of the Freiberg
Bergakademie in 1765.

 tian Martini, | Buchh. in der Nicolai-Straße. 1725.

8°: [44], 1008, [32] p., frontispiece, 12 plates, title in red and black.

SCARCE. Henckel, director of the mining works at Freiberg, was called by Partington the “father of mineral chemistry.” In the famous *Kieshistorie* he has written a monograph on the single topic of pyrite. Henckel recognized three types: golden iron pyrites, golden copper pyrites and white arsenic pyrites. Within the body of the text, he proceeds to describe, experiment and speculate upon each of these types. Henckel uses physical properties such as hardness and crystal form, chemical composition including the amounts of sulphur, arsenic, copper, etc contained, and speculates on why pyrite is usually found in association with rich veins of ore. It is an encyclopedic work on the subject, and exerted a strong influence of subsequent investigators engaged in mineral analysis.

The attractive and charmingly primitive frontispiece depicts ore being transported from the mine to a smelting shed and other aspects of mining life. The plates depict pyrites in their various forms.

HENCKEL

SCARCE. Henckel, director of the mining works at Freiberg, has been called the "father of mineral chemistry." In the famous *Kieshistorie* he has written a monograph on the single topic of pyrite. Henckel recognized three types: golden iron pyrites, golden copper pyrites and white arsenic pyrites. Within the body of the text, he proceeds to describe, experiment and speculate upon each of these types. Henckel uses physical properties such as hardness and crystal form, chemical composition including the amounts of sulphur, arsenic, copper, etc contained, and speculates on why pyrite is usually found in association with rich veins of ore. It is an encyclopedic work on the subject, and exerted a strong influence of subsequent investigators engaged in mineral analysis.

The text is divided into 16 chapters. (1) Introduces the subject of the book and the method Henckel will use to explain the topic, (2) discusses the names of the pyrites, (3) distinguishes several species of pyrites, (4) beds (outcrops) of pyrites, (5) the production and generation of pyrites, (6) description of iron pyrites, (7) description of copper pyrites, (8) examines the unmetallic earths found in pyrites, (9) sulphur in pyrites, (10) arsenic in pyrites, (11) silver in pyrites, (12) gold in pyrites, (13) discusses theories of the formation of pyrites, (14) vitriol of pyrites, (15) explains several uses of pyrites, especially in reference to making sulphur, and (16) a history of Hessian pyrites, called Terra martis Hessiaca, communicated by M. Rosinus.

The attractive and charmingly primitive frontispiece depicts ore being transported from the mine to a smelting shed and other aspects of mining life. The plates depict pyrites in their various forms.

It comprises translations of his work on pyrites (1st ed., 1725), on the relationship between minerals and plants (1st ed., 1722), his Appropriation, his General Ideas on the Origin of Stones (1st ed., 1734), his Treatise on Maladies, and translations of his mineralogical dissertations.

Majestatis | et Electoris Saxonæ | Collegii
Metallici Consiliarii | Idea Generalis | de |
Lapidum | Origine | per | Observationes |
Experimenta | & | Consectaria | succincte
adumbrata. | [rule] | Dresdæ & Lipsiæ, | in Officina
Libraria Hekeliana, | 1734.

8°: π^1 A-E⁸ F⁶; 47 ℓ .; [2], [1]-15, 34-108 p. (i.e., 92,
owing to the omission of pages 16-33 in the sequence).
PAGE SIZE: 178 x 100 mm.

CONTENTS: [2 pgs], Title page, verso blank.; [1]-15,
34-108, Text.

RARE. Contains Henckel's general observations
and theories on the origin of minerals and stones.
The text is divided into three sections. The first
(pages 1-46) contains the observations. The second
(pages 46-74) describe various experiments Henckel
performed and their outcome. The third (pages 74-
108) discuss the consequences and describe in general
congealing and coalescing of stones, germination,
crystallization and petrification of animals and
vegetables. German translations of this work appear in
Kleine mineralogische und chymische Schriften (1744,
1756, and 1769).

VERY SCARCE. Edited by Johann Emanuel Stephani. A collected volume of Henckel's writings concerning mineralized waters, salts, earths, stones, silver, copper, zinc, lead, arsenic, iron, mercury, cobalt, antimony, etc. The first part of the book describes and identifies a wide variety of mineralogical specimens. The remainder of the volume deals with derivatives of gold, silver, copper, arsenic, lead and sulfur including descriptions of tinctures, amalgams, calcination, vitrification, etc.

HENKEL, Johann Friedrich.

See: **Henckel, Johann Friedrich.**

HENSLOW, John Stevens. (BORN: Rochester, Kent, England, 6 February 1796; DIED: Hitcham, Suffolk, England, 16 May 1861) *English botanist.*

Born into a large family, Henslow was educated in the country, where he developed a love for nature. He kept this interest when he entered in 1814, Cambridge University, where he studied mathematics, chemistry, and mineralogy (under Clarke). Botany was his true interest, however. He eventually became a professor of Botany at Cambridge, a position which he kept the remainder of his professional life.

VERY RARE. In 1818 Henslow was elected a fellow of the Linnean Society and in 1819 a fellow of the Geological Society of London. He prepared an extensive geological survey of the Island of Anglesea that was published as "Geological Description of Anglesea," (*Transactions of the Cambridge Philosophical Society*, 1 (1822), 359-452). This led to his election to the chair of mineralogy at Cambridge in 1822. In that capacity he gave lectures on the subject to his students, of which the present work is the accompanying text to those classes. However, Henslow was more interested in botany, and in 1825 when the position opened, he offered himself as a candidate and was elected unopposed to the chair of botany. So Henslow's *Syllabus* was in use at Cambridge for only a few years.

HENWOOD, William Jory. (BORN: Perron Wharf, Cornwall, England, 16 January 1805; DIED: 5 August 1875) *English mining expert.*

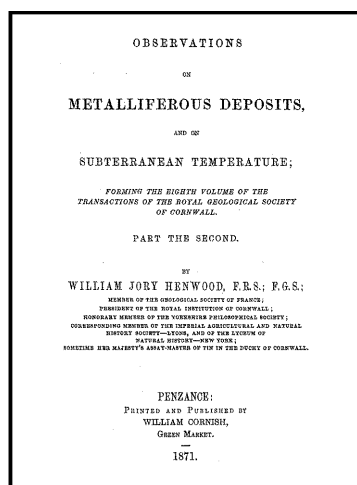

English mineralogist and mining expert. From 1832 to 1838, Henwood was the supervisor of tin production in Cornwall. He then became a consulting engineer until 1843 when he took charge of the Gongo-Soco mines in Brazil. He reported to the Indian government on the potential metal production of Kumaon and Gurhwal in 1855. In the late 1860's he retired to Cornwall and became in 1869 President of the Royal Institution of Cornwall. He was elected Fellow of both the Royal Society (1840) and the Geological Society (1828); from the later he received the Muchison Medal in 1874. A hydrous phosphate of copper and aluminum named "Henwoodite" after him by J.H. Collins in 1876.

HERBALS

OBSERVATIONS, 1871

Second. | By | William Jory Henwood, F.R.S.;
F.G.S.; | [...7 lines of titles and memberships...] |
Penzance: | Printed and Published by | William
Cornish, | Green Market. | [rule] | 1871.

2 parts. [Part 1] 8°: xxxi, 722 p., illus.,
tables. [Part 1] 8°: 382 p., illus., tables. Published
as: *Transactions of the Royal Geological Society of
Cornwall*, vol. 8, parts 1-2.

SCARCE. This is perhaps the first modern attempt
to correlate the entire world's metalloferous deposits
against one another in order to develop relationships
and similarities with their mineralization and internal
structure. Contained in the text are descriptions
of many of the major world-wide mineral resources
of the time, all examined by the author during his
distinguished career. The text is then divided into two
major parts. The first provides descriptions of mineral
resources in North-Western India, Kumanon, Guhwal,
Bengal, Chili, including Chañarcillo & Copiapò, Brazil,
especially Minas Geraës, North America, including
Virginia, Michigan and New Brunswick, Jamaica,
Spain, France, The Channel Islands, Ireland, and Great
Britain, especially Perthshire and Cornwall. The second
portion of the work describes the author's meticulous
records on the water temperatures of mines described
in the first part. Many folding plates and tables
at the end of the second section illustrate methods
of ore production and cross-sections of various mines
described in part one.

Die Drey Reiche der Natur zum Gebrauch für
Lehrer und Hofmeister bey dem Unterricht der
Jugend. Tierreichs. Erste Ausgabe. Pflanzenreichs.
Erste Ausgabe. Stein- und Mineralreichs. Erste und
Zweyte Ausgabe. [By J. C. Heppé]. Nuremberg,
Christoph Daniel Henning, 1776-80.

3 parts. [Part 1: 1776] 4°: 48 p., 10 hand-colored
plates (animal subjects). [Part 2: 1776] 4°: 56 p., 10
hand-colored plates (plant subjects). [Part 3: 1780] 4°:
62 p., 20 hand-colored plates on 17 leaves (mineral and
gem subjects). PAGE SIZE: 210 x 175 mm.

PLATES: All the plates are designed by J.C. Henning.

VERY RARE. A very rare colored illustrated work
describing the three kingdoms of nature, animals, plants
and minerals. It was directed to curious youths, and
its texts reflects this direction. Some of the zoological
plates show apes and monkeys.

HERBALS.

See also: Arbolayre (or Grant Herber).

In a descriptive bibliography of mineralogy, it would seem
that the merits of the early herbals would seem limited, but
the facts are quite different. As a group, this type of book
records the late medieval view of the natural world in terms
of how nature could be used to benefit man. Relationships
and the uses of plants, animals and minerals discussed
in these texts offers insight into the early development of
medicine, agriculture and pharmaceutical therapies for the
common person. In short, the herbals retain their relevancy
to early mineral studies.

The early printed herbals are among the most
remarkable of the stream of books printed in the incunabula
period because they are milestones in the history of printing
and scientific illustration. Although the name implies a
strictly botanical treatise, this class of book refers to a
practical medical text intended for both physicians and the
common folk. It appeared in reaction against the expensive
apothecary, calling attention to a wide range of easily
available natural remedies derived from plants, animals and
minerals. In their time, these volumes were a very popular
technical literature, and regularly relied upon by their
readers to provide cures for various ailments. However,
because of this career, many copies of these volumes were
destroyed, and the long history of the survivors is reflected
in their usually sad condition.

The beauty, rarity and inaccessibility of the herbals
has both spurred and stymied bibliographical research,
and caused much in the way of publication. As a result
errors in the literature have been introduced or permitted
to stand. Besides elucidating the mineralogical content
of these books, the purpose of this study is to hopefully
unravel the bibliographical knot of the herbals.

Most of the information related to the herbals has
occurred due to bibliographical scholarship in botany.
However, a perplexing problem in this field is the confusion
over the various titles by which the early herbals are
known. For the current study, the system proposed by
Arnold Klebs in his description of the Becher collection
is used. Klebs assigns priority to the 1484 printing by
Schoeffer of the *Herbarius*, which contains 150 illustrated
chapters. All subsequent appearances of this work will
incorporate as a compiler's comment the word HERBARIUS
at the beginning of the title. Schoeffer's second herbal

comprising 435 chapters, was published at Mainz in 1485 and was termed *Der Gart* by Klebs but in this study is referred to as *GART*. This designation will appear at the beginning of each appropriate title. The final member of the herbal triad consists of 1,066 chapters and is referred to by the descriptor *HORTUS*. In the past, these three distinct families have been bibliographically confused, with some researchers stating that they are translations of each other, which is not possible. By relying on the number of chapters within the text, 150, 435 and 1,066 respectively, it is possible to untangle the bibliographies of the *Herbarius*, *Gart* and *Hortus*.

HERBARIUS, 1484

Herbarius Latinus

2175. — Latin, 1484 [First edition].

[HERBARIUS] [In black:] Herbarius. Ma= | guntie impressus. | Anno m̄c̄. lxxxiiiij. | [in red, printer's mark].

4°: [14 2-21⁸ 22¹⁰] (unsigned; 19/8 blank); 174ℓ.; no pagination, foliation or signature marks. 150 woodcuts of plants in the text numbered i-cl. Capital spaces. PAGE SIZE: 210 x 145 mm.

CONTENTS: 1/1r (=1r), Title.; 1/1v (=1v), Blank.; 1/2r-1/2v (=2r-2v), Preface, beginning: "[R6]Ogatu plurimoꝝ inopu nūmoꝝ | egentiū appotecas refutātiū oc= | cationi illa ꝓ necessaria ibidē ad | corp⁹ egrū spectātia sūt cara sim | plicia et composita. nūmisꝓ pluri | mis ꝓparāda ..."; 1/3r-1/4v (=3r-4v), Index, "Capitula herbarū scō'm | ordinem alphabeti."; 2/1r-19/6v (=5r-154v), Text describing 150 herbs arranged alphabetically in 150 chapters on 150 leaves.; 19/7r-22/10r (=155r-174r), Text of remaining six parts of the book.; 22/10v (=174v), line 22, END: "... Valet etiā ut inde fiant | suppositoria desup spergantur pulueres de esula | et puocabūt asellationem."

EDITIO PRINCEPS. Very rare. This is the first herbal printed in Germany, from the shop of Peter

Schoeffer [see note below], one of the first printers, which issued from his press at Mainz in 1484. Herbals were so called because they described medical remedies derived chiefly, but not solely, from herbs and plants, which were then the major source of medicines. As is shown by its rapid transmission through original and pirated editions, Schoeffer's *Herbarius* rapidly became one of the most popular and useful handbooks for the general public and medical communities. The woodcut illustrations of plants helped to sustain its popularity, and these pictures were copied and recopied in subsequent editions.

The *Herbarius* shows every sign of being a compilation rather than an original work, for it quotes material drawn from classical, Arabic, and medieval sources, none of which appeared later than a century before the *Herbarius* was printed. No manuscript of it has been discovered as yet, and the original source of its illustrations remains unidentified. However, the plant species described are all found in central-northern Europe, which perhaps points to a Germanic source of the text. Schoeffer probably discovered an older manuscript which he committed to the press.

The text of the book is divided into seven parts: (1) De virtutibus herbarum, which is the major portion describes 150 German herbs and plants in brief chapters, each illustrated by a woodcut, (2) De simplicibus laxativis et lenitivis, provides information on 12 simple laxatives, (3) De simplicibus comfortativis, describes in 16 chapters various spices, (4) De fructibus et seminibus et radicibus, 22 chapters on fruits and nuts (5) De gummis et eis similibus, 10 chapters on gums, (6) De generibus salis et mineris et lapidibus, 16 chapters on minerals, stones and salts, including alum, silver, coral, lapis lazuli, sulphur, tartar, and (7) De animalibus et provenientibus ab eis, in 20 chapters describes pharmacological products derived from various animals.

The first edition of the *Herbarius* exists in several variations, none of which constitutes a separate edition, but rather each reflects a condition that occurred during the printing of the book. For convenience they are listed as A1, A2, A3, B1, B2, and B3. A1 has the title on its first leaf, printed in red or black, and also bears the date of 1484 and Schoeffer's device. A2 transposes the woodcuts for chapters 42 and 48 (*Cuscuta* and *Cannabis*), and misnumbers chapter 75 as 73. A3 corrects the misnumbering but allows the exchanged illustrations to remain uncorrected. B1 has its first leaf blank (i.e., no title page), B2 places the woodcuts for chapters 42 and 48 in their proper positions, but misnumbers 75 as 73, and B3 corrects the misnumbering, but retains the transposed illustrations in chapters 42 and 48.

Johann von Cube. (BORN: ; DIED: Franckfurt am Main, Germany, Between 23 September and 5 March 1503/4) *German physician*. Cube (also known as, Johann Dronnecke (or Wonnecke) von Caub or Cuba) lived at the end of the 15th century in Augsburg. He was physician to Adolf III of Nassau and Adalberts of Saxony. In 1484, he relocated to Frankfurt am Main where he was appointed the

HERBALS: HERBARIUS LATINUS

city physician. For centuries, he was considered the author behind the *Herbarius* (1484), but more recent research shows that he was at most an editor.

Peter Schoeffer. (BORN: ; DIED:) *German printer.* Schoeffer started as a calligrapher in Paris before coming to Mainz where he served as foreman in Gutenberg's shop. After Johann Fust repossessed Gutenberg's equipment in 1455/56 he employed Schoeffer to do the printing as well as produce type for it. Later, Schoeffer married Fust's daughter and ultimately inherited the business.

[HERBARIUS] Herbarius (with German synonyms) ... Speyer, Johann and Conrad Hist, 1484.

4^o: [1⁴ 2-22⁸] (unsigned; 22/8 blank); 172ℓ.; no pagination, foliation or signiation marks.

CONTENTS: 1/1r, Title (=1r), "Herbarius."; 1/1v (=1v), Blank.; 1/2r-1/2v, "[R]Ogatu plurimorum inopinum | ..."; 1/3r-1/4r (=3r-4r), "Capitula herbarum secundum | ordinem alphabeti, ..."; 1/4v (=4v), Blank.; 2/1r-19/6v (=5r-154v), Text of herbs with the woodcuts; 19/7r-19/7v (=155r-155v), "Particula secunda de | simplicibus laxaliuis | liniliuis seu lubrica- | liuis superioribus anti | dolis deseruientibus | ..."; 19/8 (=156), Blank.; 20/1r-22/7v (=157r-171v), "Capitulum Primum |

[] Loepaticum calidum est et siccum in se- | ..."

EXTREMELY RARE. A short time after Schoeffer's *Herbarius* appeared in 1484, the printers Johann and Conrad Hist [see notes below] issued a pirated edition of the book from their press at Speya. While the arrangement of the material and the text is identical to Schoeffer's work, the woodcut illustrations for the most part are reverse the direction of the original work—a necessecary consequence of tracing the unreversed originals into the cutter's block. The woodcuts in this Hist edition of the *Herbarius* also show a bit more artistic flare in their execution.

Of the many editions of the *Herbarius* the one printed by the Hist brothers is probably the rarest, and it is among the rarest of all printed herbals. In late 1484, a short while after it was printed, the printing activities of the Hist brothers were interrupted, and they made no further use of the *Herbarius* type until 1489. Consequently, eventhough this edition bears no printed date, its year is firmly fixed at 1484, but after the publication of Schoeffer's edition.

Conrad Hist. (BORN: ; DIED: 1531) *German printer.* and **Johann Hist** (BORN: ; DIED: before 1492), brothers and German printers.

VERY RARE. Pirated reprint of Schoeffer's *Herbarius Latinus* by Johann Petri [see note below] differing primarily in some of the German synonyms due to local differences in dialect and to the fact the many illustrations are mirror images of the originals. This is the first dated work from Petri's press and the first of several editions of the herbal to issue from his

press.

The woodcut illustrations are generally the same as those in the Mainz edition, but they are slightly different and usually reversed. Two plants (nos. 28 and 30) have different numbers than those in either the Mainz 1484 or the Passau 1486 editions. In some copies of this edition woodcut numbers 96 and 148 are printed upside down.

Johann Petri. (BORN: 1441; DIED: 1512) *German printer.* The earliest work bearing a date with which Petri has been connected is the *Herbarius* of 1485, the latest a *Calendar* for 1493.

VERY RARE. Veldener's Latin edition of the *Herbarius*. Earlier bibliographies considered this edition to have been published before Schoeffer's herbal. However, Veldener printed this edition after having issued at Kuilenburg a Dutch translation dated 1484. He returned later that year to Louvain and issued this Latin edition for the academic market of the town. Therefore, it is probably later than Schoeffer's edition.

Klebs/Becher: "The figures, except one, are all the same as in the Mainz edition, but generally reversed; plant 2 (*Abrotanum*) is from a different drawing. Generally, Veldener's woodcuts have a little more work in the way of crossed lines." The text is identical with Schoeffer's edition except that the German names of plants have been replaced with Netherlandish names.

VERY SCARCE. This is the first edition of the

INCIPIT TRATATUS DE VIRTUTIBUS HERBARUM, 1491

Herbarius to be printed in Italy, which is why the German synonyms have been omitted. It was printed by Leonardus Achates and Guilielmus de Papia [see notes below]. The woodcuts of the plants have been influenced by the design of the German cuts, but in this edition they are newly executed with somewhat finer detail. The text and arrangement are identical to Schoeffer's edition, but without the German synonyms.

Although new to this work, the title woodcut of two figures was used the year before in an edition of Piero Crescenzio's *Opus Raralium Commodorum* to represent Crescenzio preparing the book for his patron Charles of Anjou. In the present work, the cut is used to represent Arnoldus de Villa Nova discussing botany with Avicenna. The omission of the woodcut figures in subsequent editions where the names of Arnoldus and Avicenna were retained in type in their present location led to false idea of authorship of this work by Arnoldus.

The numbers to the woodcuts 113 and 119 are exchanged by misprint.

Leonardus Achates. (BORN: ; DIED: 1491) *Italian printer*. Achates was the first printer in Vicenza.

Guilielmus De Papia. (BORN: ; DIED:) *Italian printer*.

[HERBARIUS] Incipit Tractatus de | virtutibus herbarum.

4°: A⁴ a-x⁸ (\$4 signed; x8 blank); 172ℓ.; no pagination or foliation. Roman letter, 27, 28 & 37 lines, with 150 woodcuts of plants. COLOPHON (x7v): ¶ Impressum Venetiis per Simonem Pa | piensem dictum Biuilaquam Anno Do | mini Iesu Christi. 1499. die. xiiii. Decēbris.

CONTENTS: A1r, Title.; A1v, Blank.; A2r, No woodcut so text starts, "Arnoldi de nova villa Avicenna | Rogatu plurimorum ..."; a1r-s8v (=5r-154v), Text of herbs.; t1r-x7v (155r-171v), Text of other parts.; x7v, Colophon.

RARE. Second edition of the *Herbarius* printed in Italy by Simon Bevilaqua, reprinted from the 1491 edition of Achates. The woodcuts of the plants are from the same blocks. The title woodcut representing Arnoldus de Nova Villa and Avicenna is omitted, but the names are retained (see preceding entry). The woodcuts numbered 113 and 119 are exchanged as in the 1491 edition. The woodcut of Mandragora is printed upside down and misnumbered XCVIII instead of XCIII.

2186. — Latin, 1509.

[HERBARIUS] Incipit Tractatus De | Uirtutibus her
| barum.

4°: A⁴ a-x⁸ (\$4 signed; x8 blank); 172ℓ.; no pagination or foliation. With 150 woodcuts in the text numbered I-CL. Woodcut capitals. COLOPHON (x7v): **¶** Impressum Venetiis per Ioannem rubeum & | Bernardinū fratres Vercellenses. Anno | domini. M. D. VIII. die. xv. marci. PAGE SIZE: 210 x 150 mm.

RARE. This is the third edition of the 'Herbarius Latinus' printed by Johannes and Bernarinus Rubeus in Venice, and the fourth printed in Italy. With two exceptions, these are the blocks cut for the 1491 Vicenza edition, which were transferred to Venice and used by Simone Bevilacqua for his 1499 edition; two of the blocks are copies of the originals, with one reversed. The blocks were used again for the 1502 Giunta edition, which the above is a page-for-page reprint of. The preface attributes the work to Arnoldus de Villanova, as does the 1502 edition, which was copying an error in the text of the 1499.

Despite the fact that the 'Herbarius' originated in Germany, it 'sold as well in Italy, as it did in Germany, if not better. There its second section may have contributed to its success, for it was concerned with materials of medicine that were commonly available in the shops of apothecaries and spice merchants... The second section has 96 chapters, though many of them are very brief. They deal with the following: laxatives; aromatics, fruits, seed, and plants of garden and orchard; gums and resins; salts; minerals and stones; and a variety of animals and their products, such as goose-grease, cheese, honey, and ivory" (Anderson, *An illustrated history of the herbals* p. 86). The Italian woodcuts are based on the German 'Herbarius' cuts 'but all are newly designed, being finer in execution and the lines more delicate, and for the greater part quite different' (Klebs). Nissen considered them more delicate and Arber 'more ambitious... and, on the whole... more naturalistic' (Herbals p. 192).

incipit tractatus, 1520

2187. — Latin, 1520.

[HERBARIUS] Incipit Tractatus De | Virtutibus her
| barum. | [Printer's woodcut device].

4°: A⁴ a-x⁸ (A2 missigned A; x8 blank); 172ℓ.; [8] p., I-CLℓ., [34] p. Printer's device (Justice) on the title and 150 woodcuts of plants in the text. COLOPHON (x7v): **¶** Impressum Venetiis per Alexandrum de Bindonis. | Anno Domini. M.D.XX. die .4. Aprilis.

VERY SCARCE. Printed by Alexander de Bindonis, this is the fifth Venice edition (sixth printed in Italy) and the last edition of the Latin Herbarius. The woodcuts are the same as the 1509 edition. Three woodcuts bear the wrong numbers: CLVII instead of CXLVIII, CXXIII for CXXX, and LI for LII. Otherwise, it appears to be a page for page reprint of the 1509 Venice edition.

Italian editions

2190. Translation, First edition, 1522: [HERBARIUS] *Herbolario volgare* | *Acquale le virtu delle berbe:z molti | altri simplia le dichiarano:con alcune belle aggiote:no a namente de latino in volgare tra= | dutto, | †* [Woodcut, printer's device].

8^o: [8] p., 150ℓ. (numbered i-cl), [48] p., with 150 woodcuts and printer's device on the title and at end of text. PAGE SIZE: 156 x 102 mm.

RARE. First edition in Italian, with the woodcuts printed from blocks of the 15th century Latin editions,

DEN HERBARIUS IN DIJETSCH, 1511

HERBOLARIO VOLGARE, 1522

HERBALS: HERBARIUS LATINUS

published in Italy. First edition of the Herbarius translated into Italian. A preface by the translator and an index of diseases with their remedies is newly added.

The woodcuts are printed from the same blocks already used in the Latin editions, published in Italy.

REFERENCES: Essling, *Livres à Figures Vénitiens*, 1907-14: 2, 1194. • Klebs, *Catalogue of Early Herbals*, 1925: no. 15. • Nissen (BBI): no. 2316. • NLM 16th Century Books (Durling): no. 2271. • NUC: 241, 470-1 [NH 0295051]. • Payne, 'Herbarius' and 'Hortus Sanitatis', 1901: p. 88. • Pritzel, *Thesaurus Literaturæ Botanicae*, 1871-3: no. 10764. • Wellcome Catalog (Books): 1, 163.

HERBOLARIO VOLGARE, 1534

2191. Translation, 2nd edition, 1534: [HERBARIUS] Herbolario | volgare, Nelqual è le vertu delle herbe; & mol- | ti altri simplici se dechiarano, con alcune | belle aggiunte nouamente de latino | in volgare tradutto. | [Woodcut showing Saints Cosmo and Damian in a landscape].

8°: aa6 A-X8 Y6; 180l.; [12] p., 151l. (numbered i-lij), [46] p., with 151 woodcuts of plants, etc. With title woodcut (representing the Saints Damian and Cosmas in a landscape), woodcut of the Virgin and Child on aa6v and a full page woodcut of the Virgin Mary and Christ on 150. Printer's device on the last leaf. COLOPHON: Stampato ne Venetia, per Gioani Andrea Vauassore detto Guadagnino & fratelli, 1534.

CONTENTS: aalr (=1r), Title.; aa1v (=1v), "Alli lettori salute" [=preface of the translator.]; aa2r-aa2v (=2r-2v), "Prologo de lo Autore. | Mossio da priegi, ..." [=translation of Rogatu plurimorum.]; aa3r-aa6r (=3r-6r), "Tabula ordinata per alphabeto" [=index.]; aa6v (=6v), Woodcut of the Annunciation, enclosed within an ornamental frame.; A1r-T8v (=7r-158v), Text of the section on herbs.; V1r-X8v (=159r-174v), Text of the other sections.; Y1r-Y6r (=175r-180r), "Tabula ... a ogni egritudine."; Y6v (=180v), Blank.

RARE. Second edition of the Italian translation. The order of the herbs is slightly different than the 1522 edition. Two additional chapters are present: Mele (Honey) and Vino e aceto. The illustrations for these additions (one representing two tree trunks with bees, the other a wine cellar with casks) are not copied from any edition of the Herbarius, but are copied from the Latin Hortus Sanitatis. The title woodcut is probably printed here for the first time and copies of it appear in the later Herbolario editions. Essling reproduces two variants of this cut with the two medical saints (2, p. 462) from later editions of the Italian translation (1536 and 1539).

Gart der Gesundheit

GART DER GESUNDHEIT, 1485

2198. — German, 1485 [First edition].

[GART] Gart der Gesundheit ... Mainz, [Peter Schoeffer], 28 March 1485.

2°: 1-43⁸ 44-45⁴ 46⁸ (unsigned; 46/8 blank); 360ℓ.; no pagination, foliation or signiation marks. Capital spaces. Full-page woodcut on the verso of the first leaf (three sitting savants, attended by ten standing men and blank heraldic shield above) a smaller cut before the fourth part (a physician holding a urine flask and a women with a hamper), 368 cuts of plants and 11 of animals. PAGE SIZE: 288 x 202 mm.

CONTENTS: 1/1r (=1r). Blank.; 1/1v (=1v), Full-page woodcut showing 13 figures surmounted by an arch decorated with foliage and other ornaments, from which hangs a blank shield.; 1/2r-1/3v (=2r-3v), Preface, with text starting: "[O]fft vnd vil habe ich by mir selbst betracht die wundersam | werck des schepfers der nature ..."; 1/4r-46/7r, Text in 435 chapters.; 46/7v, COLOPHON (in red): "Disser Herbarius ist czu | menc3 gedruockt vnd geen= | det uff dem xxvij dage des | merc3. Anno. M. cccc. lxxxv. | [printer's device]."; 46/8 (=360), Blank.

EDITIO PRINCEPS. Extremely rare. The second herbal to be printed by Peter Schoeffer came from his press at Mainz on the 28th of March, 1485. It immediately eclipsed all previous works of a similar nature, and formed the foundation for all herbals that followed it. Although it bore no title page, Der Gart was clearly and definitively named by Schoeffer in the book's own foreword. There it was called *Ortus Sanitatis* and its German equivalent, *Gart der Gesuntheit*, the Garden of Good Health. Despite that fact, cataloguers

and bibliographers, for nonsensical reasons best left to them to explain, decided to call the work variously *Herbarius zu Teutsch*, *Hortus Sanitatis Germanice*, and the *Smaller Hortus* or *Hortus Minor*. None of that identified the book properly, but it did succeed in confusing three entirely separate publications, Schöffer's *Herbarius* and *Gart der Gesundheit*, and Meydenbach's *Hortus Sanitatis* of 1491. The works held 150, 435, and 1066 chapters respectively, so it is impossible to understand how anyone could fail to distinguish them. Nothing, however, is beyond the powers of the cloistered specialists. It was not until 1925, when Arnold Klebs established the system of referring to the books as the *Herbarius*, *Der Gart*, and the *Hortus*, that the tangle was resolved. The sad fact remains, though, that not all libraries have taken Klebs's advice even as yet.

The 435 chapters of *Der Gart* are written in the dialect of southern Germany, 368 of them dealing with plants of medicinal value; and eleven with animal substances. Each of those is illustrated with a woodcut picturing its subject, and the majority are highly identifiable, well drawn, and artistically executed. Understandably the cuts of material outside the artists' direct experience are either poorly done or fictitious. That was a consequence of their arrival in Europe, from distant parts of Asia and Africa, in dry, shrunken, broken, or powdered condition. Some fifty-six chapters were left unillustrated since their commonly known substances, such as cheese, water, flour or lead, did not seem to call for picturization. Among them are four liquids, fourteen items of animal origin, fifteen plant drugs and products, and twenty-three minerals.

The artist responsible for the designs remains unknown, although the name of Erhard Reuwich, or his studio, is most often put forward on stylistic grounds. That remains debatable in the absence of any contract or other record. The same anonymity attaches to the text, which is obviously a compilation, and of which no original manuscript exists. There are, however, some signs of a single guiding editorial intelligence in the consistency of stylistic mannerisms and certain practices. For instance, none of the extracts from earlier works, save for direct quotations, have been allowed to stand in a raw, unrevised state. There is also evidence of cleverly concealed padding through the use of rare synonyms to disguise repeated matter; for example, Tormentill also appears as Filla, and Manna as Tereniabin. These appear to be a deliberate contrivance since more common synonyms, but easily recognizable ones, were available. The name of one physician who would have been familiar with such terms actually appears in Chapter 76, on Armenian bole, as Master Johan van Cube. This has been thought to refer to one of Schöffer's associates, Johann Wonnecke van Caub, Town Physician of Frankfurt, site of Schöffer's home. No record exists, however, that substantiates such an identification.

In the meantime, while *Der Gart*'s mysteries may persist, the work remains a masterpiece, and is the

earliest printed monument of scientific illustration.

2200. — German, 1485 [22 August].

[GART] Der Gart der Gesundheit ... Augspurg, [Schönsperger], 22 August 1485.

2°; a-z⁸ A-V⁸ T⁸ V⁸ X¹⁰ (X10 blank); 370ℓ.; no pagination or foliation. Gothic letter, 38 lines, capital spaces. Full-page woodcut on the verso of the first leaf (three sitting savants, attended by ten others), a smaller cut on the recto of leaf 341 (physician holding a urine flask and a women) and hundreds of text cuts representing plants and animals. PAGE SIZE: 305 x 210 mm.

CONTENTS: a1r, Blank.; a1v, Woodcut.; a2r, "Offt vnd vil hab ich beÿ mir selbs betracht dÿe wū | dersame werck des schepffers der natur ..."; X9r, COLOPHON: "¶ Hÿe hat ein end der herbarius | in der keyserlichen statt Augsp | urg Gedruckt vnd vollendet an | montag nechst vor BVartholo | mei nach Cristi gepurt M. cccc | lxxxv."; X10, Blank.

VERY RARE. Second edition of *Der Gart* and the first issued by Schönsperger. It is a rapidly prepared reprint (within 5 months) of Schoeffer's first edition dated March 28 of the same year. The speed with which the original was pirated is a testament to the efficiency of an early press and indicates that several

HERBALS: GART DER GESUNDHEIT

compositors must have been employed on the project. However, because Schönsperger at the time only had access to a large type, the book increased from 369 leaves, instead of Schoeffer's 359. In time Schönsperger became the most productive of the early printer of Herbals, with eight or nine different editions coming from his press between 1485 and 1499, or more than half of the German editions published that century.

The woodcuts are copies of Schoeffer's originals, mostly reversed and somewhat smaller. Choulant believes these illustrations to be of better quality than Schoeffer's. The full-page woodcut on the verso of the first leaf is an almost exact copy of the Mainz edition but with the shield at the top containing a pine-cone, the arms of Augsburg.

Johann Schönsperger. (BORN: ; DIED:) *German printer.* Schönsperger's earliest dated book is 1 September 1481, and he continued to print into the sixteenth century.

GART DER GESUNDHEIT, 1486 (AUGSBURG)

2201. — German, 1486 [5 June].

[GART] Der Gart der Gesundheit ... Augsburg,

Johann Schönsperger, 5 June 1486.

2°: a-i⁸ k-t⁶ v-z⁸ A-D⁸ E⁶ F⁸ G-H⁶ I⁷ (I⁷ blank); 258ℓ.; no pagination or foliation. Two column, Gothic letter, 42 lines, with full-page woodcut on the verso of the first leaf (three sitting savants with two attendants in a chemist's shop, behind them an apprentice with a mortar), a smaller cut (a physician with a urine flask and a women), and 394 other text woodcuts of plants and animals.

VERY RARE. This is Schönsperger's second printing of *Der Gart*, and has substantial differences from the first, which was simply a copy of the original Schoeffer edition. Here the format has been completely changed by reducing the size of the illustrations to fit onto double-columned pages. That practice not only effected a saving in paper costs, but also resulted in a book of a much handier size. So successful was this adaptation that Schönsperger issued it eight times in all between 1486 and 1502.

Ten new woodcuts were added to the book, and one, Bone from a Deer's Heart, was redesigned, while both the frontispiece and the heading for the Book of Urines were altered, the latter only slightly. In the case of the frontispiece Schönsperger reduced the number of physicians shown to only five, and placed them inside an apothecary's shop where an assistant was preparing herbs, rather than in the garden setting that they had originally inhabited.

The woodcuts of this edition possess a high degree of artistry and some features of note. The appearance of silver, for instance, has been cleverly counterfeited by the use of powdered tin, and is still untarnished after nearly 500 years. And in the image of the gourd, Cucurbit, the typical white flower is portrayed accurately by reserving a blank space for it against a green leaf, a detail that demonstrates to perfection the quality of medieval craftsmanship.

2202. — German, 1485/1486.

[GART] Der Gart der Gesundheit ... Strassburg, Johann (Reinhard) Grüninger, 1485/1486.

2°: a-z⁸ A-C⁸ [1-2⁸] (the last two quires unsigned; 2/8 blank); 224ℓ.; no pagination or foliation. Two column, Gothic letter, 43 lines, capital spaces. Full-page woodcut at the beginning (three savants sitting, attended by nine others), smaller cut (physician and women), 384 text cuts of plants and animals. PAGE SIZE: 207 x 189 mm.

CONTENTS: a1r, Woodcut.; a2v, Blank.; a2r, "[O]fft vnd | vil habe | ich by mir selbst | betracht dy wū | dersam werck | des schöpfers d' | natuer wie er am anbeginde dē hy- | mel hat beschaffen vñ gezyeret mit | schönen

leuchtendē steren ..."; C7v (=207v), column 1, part 6: "Hie nach volget das | funffte teyl vnnd das lest diß büchs. | vnd ist ein register behende zu finden | von allen krancgheyten der menschē ..."; 2/5r (=221r), column 2: "Diß sint die capitelder | kruter nach ordnung des alphabets ..."; 2/8v (=227v), END: "Zucarum zucker. Capitulu. cccxxv."

VERY RARE. Schoeffer's *Der Gart* inspired a second plagiarism of the original with the issuance of Johann Grüninger's edition at Strassburg. Although it bears no date it is virtually certain that it was published in 1486 and almost at the same time as the Augsburg version by Schonsperger. Because of the date's omission, controversy about priority of publication between these two plagiarisms has continued to the present. Since Schodgsperger had already issued an exact copy of *Der Gart* in 1485 it is entirely possible that his previous familiarity with the work gave him a slight edge in beating out Grüninger to the bookstalls. As Arnold Klebs, the noted bibliographer, has stated elsewhere, the notion of a more economical format may very well have occurred to both printers simultaneously out of the natural logic flowing from their own experience. But only one observation can be made with certainty, namely, that while both copied Schoeffer neither copied the original cuts of each other.

Grüninger added only five woodcuts of his own, and eliminated but one physician from his adaptation of the frontispiece. What is more, some of his chapter headings are left blank although model illustrations for them were already available. Despite its slightly restricted repertoire of im-ages this edition served as the model for Conrad Dinckmut's publication in 1487, and later for that of Michael Furter at Bash, c. 1490. Through this latter work it influenced the pictorial style of the famous French herbal, *Arbolayre*, later called the *Grant Herbier*, and also its English translation, *The Grete Herball*.

Only one copy of the original edition is known in the United States, and there is no record of any having received contemporary coloring. Yet despite the extreme rarity of the Grüninger original its use by other printers has made its woodcuts the most familiar and widely distributed among the early herbals before those of Brunfels and Fuchs in the sixteenth century.

Johann (Reinhard) Grüninger. (BORN: ; DIED: Strassburg, Alsace, France, 1529?) *German printer.* Grüninger's earliest dated book is the Petrus Comestor's *Historia Scholastica*, completed 28 August 1483.

(Grüninger) ADB. • BMC XV.

2203. — German, 1486/1487.

[GART] *Der Gart der Gesundheit* ... Basel, Michael

Furter about 1486/1487.

2°: 224 leaves (the last blank). Two columns, Gothic letter, 43-44 lines, with full-page woodcut (assembly of 12 physicians, three sitting and nine standing), smaller cut of physician and a woman, and hundreds of text cuts of plants, animals, etc. Floreated initial letters.

VERY RARE. The only herbal to be printed in Switzerland before 1500 and is nearly an exact reprint of Grüninger's edition of 1485/1486, showing only slight variations of orthography. The cuts with chapter numbers are printed from Grüninger's woodblocks. The full-page woodcut is reversed from Grüninger's edition while the heraldic shield is left blank. Furter adds for the first time floreated woodcut initials, white on black, to most of the chapters. There exists some connection between between this edition and the first French herbal (*Arbolayre*, Besançon, Metlinger) where the same woodcuts and initials are used.

GART DER GESUNDHEIT, 1487 (ULM)

2204. — German, 1487 [31 March].

[GART] *Der Gart der Gesundheit* ... Ulm, Conrad

HERBALS: GART DER GESUNDHEIT

Dinckmut 1487, Samstag vor Judica (31 March).

2°: a-z⁸ A-D⁸ E⁶ F-G⁸ H¹⁰ (H10 blank); 248ℓ.; no pagination or foliation. Two columns, Gothic letter, 40 lines, with full-page woodcut (assembly of 12 physicians) on the verso of leaf one, smaller woodcut (physician holding urine-flask, and a woman) on leaf F2, and 393 woodcuts plants, animals, etc. COLOPHON (H9r): "Gedruckt vnd vollendet seligklichen diser | Herbarius. Durch Conraden Dinckmut zu | Ulm. Am samstag vor Judica. Als man zalt | nach Christi vnsers herren geburt Tausent | vierhundert vnd sibendachtzig Jare. | Gottsey lob." PAGE SIZE: 284 x 202 mm.

CONTENTS: a1r, Blank.; a1v, Woodcut.; a2r, "[O]fft vñ vil hab | ich bey mir se | lbs betrachtet | die wundersamen | werck des schöpfers der naturen | ..."; E6r (=222r), col. 2, line 33: "... in seinem büch de in | genio sanitatis."; F1r (=223r), "Disz ist das dritteil disz | büchs. vñ ist ain register zefinden | kreüter die do laxiren ..."; (=224r), col. 2: "Disz ist das vierde teil | dif büchs ..."; H9r (=247r), COLOPHON: "Gedruckt vnd vollendet seligklichen diser | Herbarius. Durch Conraden Dinckmut zu | Vlm. Am samstag vo Iudica. Als man zalt | nach Christi vnsers herren geburt Tausent | vierhundert vnd sibendachtzig Jare. | Gott sey lob."

VERY RARE. The only herbal edition printed by Conrad Dinckmut [see note below]. The woodcuts have a resemblance to the corresponding ones in the Grüninger's edition. Klebs/Becher believes the Grüninger edition to be earlier than Dinckmut's edition because the woodcuts in the later are cruder and appear to have copied from the former and not vice versa. Dinckmut's edition contains also five woodcuts to chapters 37, 50, 142-144 which appear already in Grüninger's edition but are not found in Schoeffer's herbal. Of these chapters, Schönsperger illustrated only chapter 37, 50 and 143, but with cuts different from Grüninger's edition.

The full-page woodcut is likewise copied from the one in Grüninger's edition, reversed and with slight differences, the shield for instance is not blank, but contains the arms of Ulm. Eight woodcuts (to chapters 38-40, 42, 44, 48-49, and 81) have no corresponding ones in either the Schoeffer or Grüninger editions, and are instead copied from Schönsperger.

Dinckmut's books are all very rare and in great demand by collectors.

Conrad Dinckmut. (BORN: ; DIED:) *German printer.* Dinckmut seems to have begun his career as a printer around 1482, when he produced at least four books, but he is listed as a 'Buchdrucker' in the Ulm rate-lists of 1476, and a calendar for 1478, which is in his type and presumed to have been printed by him. He continued to print at Ulm through 1496. He left the city in 1499.

2207. — German, 1488 [15 December].

[GART] Herbarius zû teüt | sch vnd von aller | handt kreüteren.

2°: [*]⁴ a-z⁸ A-D⁸ E⁶ F⁸ G-H⁶ I⁸ (I8 blank); 262ℓ.; no pagination or foliation. Two columns, Gothic letter, 42 lines, with full-page woodcut on the recto of leaf 5 (five physicians in a chemist's shop, behind them an apprentice with a mortar) and hundreds of text cuts of plants and animals. PAGE SIZE: 256 x 187 mm.

CONTENTS: [*]1r, Title.; 17v, COLOPHON: "Gedruckt vnd volendet dýserlichen statt | zû Augspurg am montag vor | san Thomas tag. Anno. M. cccc | vnd in dem. lxxxvij. jare."

VERY RARE. Printed in Augsburg by Johann Schönsperger on the 15 December 1488. This edition shows for the first time a separate title, followed by an alphabetical table of German names of plants, which is a new addition. The text begins on the recto of leaf 8. The full-page woodcut, the woodcut before the urine tract (physican and woman) and the woodcuts in the text are the same as in Schönsperger's second edition of 1486.

2209. — German, 1493 [13 August].

[GART] Herbarius zu teüt | sche vnd von alter | handt kreüterten.

2°: 260 leaves (the last two blank). Two columns, Gothic letter, 42 lines, with hundreds of text woodcuts of plants, animals, etc.

VERY RARE. Printed in Augsburg by Johann Schönsperger on the 13 August 1493. Klebs/Becher: "There exist two different Schönsperger editions, both issued, according to their colophons, on the "Affermontag nach Tyburcij," 1493 (=13 August), which are separately quoted by Sudhoff and Klebs. Hains 8954 mentions the variant in a note. Klebs rants this edition after the other variant. It represents, according to Klebs and Sudhoff, a new issue containing unchanged only the make-up of the signatures: d, h, k, p-J."

2210. Variant edition, 1493: [GART] Herbarius zu teütsche/ vnnd von allerhandt kreüterten ... Augsburg, Johann Schönsperger, 13 August 1493.

2°: 262ℓ. Two columns, Gothic letter, 42 lines, with hundreds of text woodcuts of plants, animals, etc.

VERY RARE. A variant edition of the previous title. Klebs/Becher: "It uses a somewhat different type with many variations in orthography, especially in the use of i and y. The chapter headings are printed with another Gothic type, considerably smaller than the previous edition, in which the headings always begin with a large initial, while most of the headings of this edition begin with small letters. The misprint at the beginning of the preface: '... weercke' seems to be found only in this edition."

2211. — German, 1496 [10 May].

[GART] Herbarius zu teütsche | vnnd von allerhandt kreüterten.

2°: 262 leaves (the last two blank). Two columns, Gothic letter, 39 lines, with full-page woodcut (group of five savants in pharmacy, behind them an apprentice), and hundreds of text woodcuts of plants, animals, etc.

VERY RARE. Printed in Augsburg by Johann Schönsperger on the 10 May 1496. Reprint of Schönsperger's second edition of 1486 with the same woodcuts, to which several small ones are added. Initial letter at the beginning.

REFERENCES: Choulant, *Graphische Incunabeln*, 1858: p. 60, no. 12. • Goff: G-106. • Hain, *Repertorium Bibliographicum*, 1826-38: no. 8955*. • Klebs, *Herbals of the Fifteenth Century*, 1917-8: p. 48, no. 14. • Klebs, *Catalogue of Early Herbals*, 1925: no. 31. • Nissen (BBI): no. 2274. • NUC: 255, 431-4 [NH 0533421]. • Pritzel, *Thesaurus Literaturæ Botanicae*, 1871-3: no. 10830. • Schreiber, *Manuel de la Gravure*, 1893-1911: 5, no. 4343. • Sudhoff, *Deutsche Medizinische Inkunabeln*, 1908: no. 75.

2212. — German, 1499 [13 May].

[GART] Herbarius zu teütsche/ vnnd von allerhandt kreüterten. ... Augsburg, Johann Schönsperger, 13 May 1499.

2°: 262ℓ. Two columns, Gothic letter, 39 lines, with large woodcut on the title (apothecary and physician in a chemist's shop), two full-page woodcuts (1: magister sitting on an elaborate arm chair and four pupils; 2: three savants, sitting in a pharmacy, attended by two others, behind them an apprentice), hundreds of text woodcuts of plants, animals, etc.

VERY RARE. This edition of which only a few examples are known shows the same make-up of text (except the first five leaves) as Schönsperger's 1496 edition. The title page woodcut and the full-page woodcut first occur in Brunschwig's *Chirurgia*, Strassburg, Grüninger, 1497. After the title are four leaves being a table of German plants of names.

2214. — German, 1507-9.

[GART] [Part I:] In disem Büch ist der Herbar: oder kreüterbuch, genant der gart der gesuntheit, mit merern figuresn vnd registern ... [Strassburg, Johann Prüss, 1507].

[SECOND PART:]

[Part II: Hortus Sanitatis translated into German] In diesem Büch ist der Gart der gesuntheit (zu latin Ortus sanitatis) in vier theyl getheylet. Mit seinen register der artznyen ... [Strassburg, Johann Prüss, 1509].

HERBALS: GART DER GESUNDHEIT

2 parts in one volume. [Part 1: 1507] 2°: a-z⁶ A-H⁶ Aa-Dd⁶ (Dd6 blank); 204ℓ.; [6], clxxxii, [17]ℓ., errors in foliation. Gothic letter, 5 nearly full-page woodcuts (1, on the title: apothecary with physician; 2/3, patient in bed and three attending physicians (repeated); 3: human skeleton; 4: chemist cooking, and physician with vessel), and many smaller text cuts of plants and genre pictures. [Part 2: 1509] 2°: a-o⁶ A-O⁶ (O6 blank); 174ℓ.; no pagination or foliation. Two columns, Gothic letter, with three large woodcuts (1/2: patient in bed and three attending physicians (repeated); 3: human skeleton), over 500 smaller text cuts of animals, fishes, birds and precious stones. Four of these smaller cuts are on the title page.

VERY RARE. A compilation of the German *Gart* with parts of the Latin *Hortus Sanitatis* translated into German. The first part is a reprint of the German *Gart der Gesundheit*. The second part is the first German translation of the Latin *Hortus Sanitatis*, comprising the four sections dealing with animals, fishes, birds and precious stones. The portion on the plants is not translated as that material is covered in the first part. The greater part of the smaller woodcuts are derived from Prüss' fifteenth century editions.

2215. — German, 1508.

[GART] *Herbarius zu teütsche vnd von allerhand kreüter ...* Augsburg, Hans Otmar für Johann Reynmann, 1508.

2°: 240 leaves (the last blank). Gothic letter, with large woodcut on the title page (apothecary and physician in a chemist's shop), two full-page woodcuts (magister and four pupils; three savants in a pharmacy, attended by two others, behind them an apprentice), very many woodcuts of plants, animals, precious stones in the text. Initial letter at the beginning.

VERY RARE. Only a few copies of this edition are known. It is printed by Hanns Otmar [see note below] and is a reprint of the preceding editions of Schönsperger, 1496 and 1499, with only the orthography showing variations. Otmar has used the same page make-up and the same woodcuts and types as Schönsperger. However, by introducing broader columns, he reduces the contents to 239 leaves. A curious woodcut at the end shows Christ (or Godfather?) with the holy lamb, and the convocation of the Last Judgement. (Klebs/Becher)

Hanns Otmar. (BORN: Reutlingen, Germany, ; DIED: Augsburg, Germany?,) *German printer*. Between 1479 and 1501, Otmar printed many books at Reutlingen and Tübingen, but in 1501 reestablished himself in Augsburg, where he published his first title from this, his third press, in 1502.

HERBARY: ODER KREUTERBUCH, 1515

2216. — German, 1515.

[GART] In disem büch ist | der Herbary: oder kreuterbuch: genant der gart | der gesuntheit: mit merern figuren vnd registern. | [Woodcut showing two figures inside an apothecary shop].

2°: a-z⁶ A-E⁶ Aa² Bb⁸ Cc⁶; 184ℓ.; [6]ℓ., leaves I-CLX, [1] leaf (skelton), 17ℓ (index), 5 large woodcuts (1: Apothecary's shop with two figures; 2/3: patient in bed, with three physicans (repeated); 4: full-page skeleton; 5: chemist cooking and a physician with vessel), and 436 text woodcuts of plants, animals, precious stones and minerals. Printer's mark on the last leaf. Colophon: "Getruckt ... durch Renatum Beck / Büchtrucker züm Thierfasten. In dem Jar da man zalt nach der geburt Christi/Tusent/fünff-hundert vnd.xv."

VERY SCARCE. This is the first edition of *Gart der Gesundheit* to be printed by Renatus Beck [see note below]. In appearance it mimics the incunabula editions (an almost exact copy of Prüss 1507 edition), using to a large extent the old woodcuts, with only a few new ones to replace lost wood blocks.

Renatus Beck. (BORN: köln, Germany, ; DIED: Strasbourg, Alsace, France, 1521/2) *German printer*. Beck became a citizen of Strasbourg in 1511. He established his press there as well.

Low German Dialect editions

2223. — German, 1492 [Low German Dialect].

[GART] Gaerde der suntheit ... Lübeck, Steffen Arndes, 1492.

2°: 324 leaves, 41 lines, with a full page woodcut on leaf 305 (a physician holding a urine flask against the sun, to the right a male cripple with hamper), and 519 text woodcuts of plants, animals, precious stones, etc. Woodcut initial letters.

VERY RARE. Printed by Steffen Arndes [see note below], this is a remarkable herbal for several reasons: it is among the earliest and most extensive of books to be printed in the Low German dialect, it possesses splendid initial letters in ornamental Gothic style, and it blends the texts from Schoeffer's *Der Gart* and Meydenbach's *Hortus Sanitatis*.

About two-thirds of the work is drawn from *Der Gart*, and the remainder from the *Hortus Sanitatis*. It is a Low German version of Schoeffer's original text, greatly augmented by translations added from the Latin *Hortus*. The "van den edelen stenen" (de lapidibus), with 146 chapters has been adapted from Meydenbach's *Hortus* and 107 new chapters on vegetable and animal subjects have been added to the main part, making a total of 688 chapters (except the tract on uroscopy). Thus, this is the edition with the greatest number of plant descriptions. However, the order of the text and the placement of the images differ considerably from both of its sources. There are numerous duplications of individual chapters, and frequent use of uncommon or exotic synonyms to conceal the padding, a fairly common practice at the time. In general its illustrations are of a high caliber, sometimes improving upon the originals, yet not quite equal to Schreiber's claim that they "surpass by far all the High German editions." 370 of the text cuts are exact copies of Schoeffer's illustrations, while other illustrations are derived from Meydenbach's *Hortus*.

Klebs/Becher: "The translation of the whole work including that of the Latin tract on precious stones, is very exact, sometimes two Low German names are added to the Latin names of herbs; the aspect of the compilation is very harmonious, indeed."

Steffen Arndes. (BORN: Mayence, Germany, ; DIED: Lübeck, Germany, 1519) *German printer*. Arndes was the greatest of the Low German printers, having published in 1494 the famous Lübeck bible. He began his printing

activities in Perugia, then afterwards at Schleswig and finally in 1487 he established himself in Lübeck. He was succeeded by his son, Hanns.

een tractaet om die trachten van alle mederinen te hen | nene/ met vele andere goede leeringhen. [ornaments] | [Four small woodcuts arranged in a square with woodcut pieces on either side forming a border].

2°: [6], CXC (i.e., CLXXXV), [19]ℓ. Gothic letter. Four small woodcuts on the title page arranged in a square within two vertical borders. One full-page woodcut (human skeleton after Grüninger's cut) and over 400 text woodcuts (several repeated) of plants, animals, genre pictures. Initial letters.

SCARCE. Third edition of the Dutch translation of the *Gart*; the first printed by Claes de Grave. Many of the woodcuts are copied and reduced from the Latin *Hortus Santatis*, especially Prüss' edition. The cuts of the genre pictures are somewhat finer in detail than their models. (Klebs/Becher) The Dutch version contains an additional treatise *Cautelen* attributed to Arnaud de Villeneuve.

Two small woodcuts on the title page (one representing a physician with urine flask and a woman the other a plant). Full-page woodcut of a human skeleton, and over 400 text woodcuts of plants, animals, etc. COLOPHON (M4r): ¶ Desen boeck is geprint in die vermeer | de ccoopstadt [!] van antwerpē bi mi Claes | die Graue In onser lieuer vrouwē pant | Bi die Camerpoorte Int iaer ons herē | M.CCCCC. ende xxvi Den xviii. daciz | van Iunio | [woodcut].

EXTREMELY RARE. Second edition printed in Antwerp by Claes de Grave. The same woodcuts as the preceding edition. According to the Hunt catalog,

only four copies of this edition are known.

The first woodcut on the title page shows a man holding a flask, and a woman with a hamper. This cut is repeated on Iir and below the colophon. The second woodcut on the title is of a plant. A full-page woodcut of a skeleton appears on H3v. Throughout the text are small woodcuts of plants, animals, stones and genre scenes.

REFERENCES: Nissen (BBI): no. 2292. • NUC: 255, 431-4 [NH 0533436].

2228. — Dutch, 1533.

[GART] Den groten herbarius met al sijn figueren der cruyden, om die crachten der cruyden te onderkennen ... Noch eenen experten tractaet om all urinen te iudiceren. Noch eenen tractaet vanden cautelen der urinen van meester Arnoldus de Villa nova ... Noch eenen tractaet om die operacien van alle droogherien ende medicijnen te kennen. Met dye anathomie vanden ghebeente vanden mensche. Moch eenen experten tractaet voer personen die op dorpen ende casteelen ... om te maken wondrancken, salven, ende olien ... Item noch eenen ... tractaet van die spaensche pocken [ghescreven door ... Wendelin Hock] ... [Thantwerpen, Claes de Grave] 1533.

4°: [4], clxiii, [31]ℓ. Gothic letter. Title in red and black with a woodcut at the bottom representing a "Garden of Health." Full-page woodcut of a human skeleton and over 400 text woodcuts of plants, animals, etc.

SCARCE. Third edition by Claes de Grave, to which is added another treatise, "Den Antidotarius voor Barbiers ende ander, om te maken Saluen, Olien, Plaesteren, Poederen, Slaepdrancken ende Wondrancken." This text starts at leaf M4 and ends on O6. Otherwise, except for the title, the work is an almost exact reprint of the preceding editions.

REFERENCES: Klebs, *Catalogue of Early Herbals*, 1925: no. 42. • Nijhoff & Kronenberg, *Nederlandsche Bibliographie*: no. 1053. • Nissen (BBI): no. 2291. • NUC: 255, 431-4 [NH 0533437].

2229. — Dutch, 1538.

[GART] Den groten herbarius ... Utrecht, Jan Bernts, 1538.

2°: 186ℓ. Gothic letter. Title in red and black with one large and two small woodcuts, full-page woodcut with printer's device on the last leaf, full-page

cut of a human skeleton, and over 450 text woodcuts of plants, animals, etc.

VERY RARE. The only herbal edition printed by Jan Bernts, and especially interesting for the numerous splendid illustrations. The title woodcut and the cuts of the plants are mostly printed from blocks used formerly in the *Grete Herball* (London, 1526). This interesting fact explains why the 1539 edition of the *Grete Herball* was published without illustrations, the old block having been secured by Brent for this Utrecht edition. Besides the cuts of plants, etc. that are printed here with nice borders along the vertical sides, this edition contains a large number of new illustrations, executed by artists of merit.

Anno salutis Millesimo Quadringentesimo Nonagesimo primo, Die vero Iouis vicesima tertia mensis Iunij.; 2E6, Blank.

EDITIO PRINCEPS. Extremely rare. Printed by Jacob Meydenbach [see note below] as his first book, the *Hortus Sanitatis*, completed June 23, 1491, provided a most glorious sunset for the incunabula herbal, outdoing all previous works of its time in the scope of its concept and setting the standard for the future. It contained 1,066 chapters, each with its own woodcut depiction, placing it among the most extensively illustrated books of its time, and one of the finest illustrated works of this early period. It is a descendent of the *Herbarius* and *Der Gart* in both its text and illustrations but it is also a wholly independent work.

The text is divided into the following sections: (1) Prohemium, being a translation of the preface to *Der Gart*, (2) *Tractatus de Herbis* consisting of 530 chapters describing medicaments of plant origin, (3) a treatise on land animals in 164 chapters, (4) a treatise on birds in 122 chapters, (5) a treatise on fishes in 106 chapters, (6) a treatise on stones and minerals in 144 chapters, and (7) a treatise on urines. Following are a long therapeutical index of diseases referred to in each division of the book, and an alphabetical index to each part. It concludes with an epilogue by the printer, in which he claims credit for producing this book and for the city of Mainz the credit of the invention of printing. In essence this volume was a medieval natural history, but one that mingled medicine with folklore, and from its pages can be reconstructed both the state of knowledge and the spirit of its age.

Since it was published in 1491, this was the last large European work of natural history to predate the discovery of the New World, thus it provides a clear historical time capsule. In some measure the text obscures its wealth of detail by retaining the contractions used by scribes of the manuscript era in its typography. Moreover, there are frequent examples of padding by the book's compiler, who hides his duplications under rare and unusual synonyms drawn from Greek and Arabic sources. That practice creates still further problems in that there are misspellings, as well as mistranscribed manuscript material, sometimes beyond any clarification. But despite its flaws the *Hortus Sanitatis* contains a record of unique value, and a charm that has not dimmed in over 500 years.

The 7 full page woodcuts are: (1) three sitting

HERBALS: HORTUS SANITATIS

savants and six attendants, (2) three savants and eight different animals, (3) two men and several birds, (4) two men and fishes, (5) jeweller's shop with 12 persons, (6) apothecary's shop with nine persons, (7) two physicians and six patients. These as well as the hundreds of text cuts were executed in the manner of the Master of the Ulm Aesop, another illustrated work of the period.

Jacob Meydenbach. (BORN: c1444; DIED: Mainz, Germany?, after 1495) *German printer.* Jacob Meydenbach is assumed to be the son of one Johann Meydenbach who is recorded by Sebastian Münster to have moved with Gutenberg from Strasbourg to Mainz and formed a partnership with the later and Fust. Four items, dated 1491, 1492 and 1495 are known to be from Jacob Meydenbach's press, as well as four undated items, including an edition of *Der Totentanz* (=Dance of Death).

RARE. This is the first of Prüss' [see note below] reprints of Meydenbach's *Hortus*. By increasing the number of lines in each column and going to a smaller type Prüss reduced the size of the book from 454 to 360 leaves. It is apparently this edition, rather than Meydenbach's original that seems to be the model for the subsequent Latin editions and translations into other languages. The "Tractatus de animalibus" and "Tractatus de urinis" have divisional title-pages with full-page woodcuts on verso; these woodcuts also appear in Gruninger's edition of Hieronymus Brunschwig's *Cirurgia* (Strasbourg, 4 July 1497). Illustrated with 3 full-page and 1,061 smaller woodcuts in text, modelled after those in the first ed. (Mainz, J. Meydenbach, 23 June 1491).

Prüss was the publisher who really profited from the Latin Hortus (Meydenbach never issued subsequent editions). He produced his editions with economy of paper by printing in a small type in 55 lines. Instead of the seven full-page woodcuts used in Meydenbach's edition, Prüss only includes three, the first and third taken from Brunschwig's *Cirurgia*, the second (the human skeleton) from Brunschwig's *Anatomia*. He also copies the textcuts from Meydenbach, but some of them are repeated, as if similar figures were involved. Of the new cuts, "The most interesting of the genre pictures (especially those to the parts of zoology and mineralogy), for the draughtsman worked on these more individually with regard to the costumes, which represent those in use in Alsace at that time." (Klebs/Becher).

There are three full page woodcuts: (1) magister sitting at his desk, with students, (2) human skeleton, (3) apothecary sitting in his shop and physician. The depiction of the skeleton appears here for the first time in an edition of the herbals. It was used repeatedly in almost all the subsequent herbal editions issued in Latin, French and some German editions upto about 1540.

Johann Prüss. (BORN: c1447; DIED: 1510) *German/French printer.* Prüss' earliest known book is the *Formulare* of 1483.

RARE. Probably the second edition of Prüss' reprint of Meydenbach's *Hortus*, which shows only a few slight variations to his first reprint edition (see previous entry). Although identical, the woodcuts are sometimes not as fresh as those used in the earlier edition.

2234. — Latin, c1499.

[HORTUS] Hortus Sanitatis Major ... [Strassburg, Johann Prüss, c1499].

2°: 360l. Two columns, 56 lines per page in Gothic character.

RARE. Third edition of Prüss, being an almost exact reprint of his prior editions, with only slight variations in the text arrangement. The block of the large woodcut (apothecary and physician) is reduced in height in this edition. Before the second part (the tract on animals, etc.) appear four cuts, each with special headings arranged in a rectangle. Before the tract on the urine, there is a new woodcut of a patient in bed with three attending physicians, taken from Brunschwig's *Cirurgia*. Otherwise, the text figures appear to come from the same blocks as the preceding editions. Choulant believes this edition to be different than that quoted by Hain 8943.

The four full page woodcuts consist of: (1/2) apothecary sitting, and physician (repeated), (3) human skeleton, (4) patient in bed, and three attending physicians.

CONTENTS: a1r, Title.; a1v, Woodcut (Consultation of 6 physicians within a border).; a2r-Ii6v, De Herbis.; A1r, Sectional title page.; A1v, Woodcut (skeleton).; A2r-F6v, De Animalibus.; G4r-L5r, De Auibus.; L5v-P4v, De Piscibus.; P5r-V8v, De Lapidibus.; aa1r, Sectional title page.; aa1v, Woodcut (urine examine).; aa1r-bb4v, De Urinis.; bb5r-cc6v, Galenos' *Liber de Facile Acquisibilibus*.; dd1r-ff5v, *Tabula Medicinalis*.

RARE. Printed in Venice, by Bernardinus Benalium and Joannes Tacuinus de Cereto de Tridino in 1511. The first reprint of the Latin *Hortus* in Italy, valued for its fine woodcuts. The model for this reprint was according to Schreiber the Prüss edition of 1509, from which most of the cuts were copied. These cuts, being reversed copies show many times considerable variations from those in the editions of 1497-1509. They were modified to be more attractive to the Italian purchaser of the book. Several of the cuts appear to be newly added.

Two of the full page woodcuts by a Venetian master appear here for the first time. Both are surrounded by an ornamental border, white on a black background. Essling says that the second of these is a free copy of a similar image found in Kentham *Fasciculo de Medicina* (1493). The image of the skeleton is a direct copy from the Prüss edition, as is indicated by the inclusion of some German names for the bones, even though this book was printed in Italy for the Italian market. After the tract on urine, there follows a short tract from Galen, "Liber de Facile Acquisibilibus," translated by Nicolaus de Regio.

The three full page woodcuts consist of: (1) consultation of six physicians, surrounded by a fine border, (2) human skeleton, (3) four physicians examine urine flasks, with three attendants, surrounded by a fine border.

CONTENTS: a1r, Title.; K1r, Four small woodcuts of animals, birds, fish and a man gathering stones.; K1v, Woodcut (skeleton).; K2r, De Animalibus.; Q4r, De Auibus.; U5v, De Piscibus.; Aa6r, De Lapidibus.; Gg1r, Small woodcut of a physician at a desk holding a flask, and a woman with hamper standing before him.; Gg1v, De Urinis.; Ii1r, *Tabula Medicinalis*.

VERY SCARCE. First edition of the *Hortus* produced by Renatus Beck, the successor of Prüss. Except for the skeleton cut, all the other full page woodcuts are omitted. The text cuts are the same as those used by Prüss, and are apparently imprinted from Prüss' woodblocks, some retouched, some are substituted by others.

Like the Prüss edition of 1499, after the section on plants there follows a leaf with four woodcuts with the headline, "Sequuntur alii tractatus" below. However, the cut of fishes is substituted by another, very similar one. At the start of the urine tract is a new small woodcut showing a physician, examining the urine flask presented him by a woman. The fine title border was cut by Urs Graf, and shows naked children and vine.

[- de Animalibus - de Piscibus - de Lapidibus].; ff5v, Colophon (on a slip of paper pasted to the page).; ff6, Blank.

RARE. Edition not noticed by most of the standard bibliographies. A parts title-issue reprint of the Venice, 1511 edition, with a new title page, printed in red and black and dated 1538, and with several other variations in the text. The sectional title page to the treatise on animals is printed in Roman letter, but in the 1511 edition is printed in black letter. The large woodcut on the urines is partly changed and reduced. Some quires are taken from the 1511 edition, the printer apparently still being in possession of a part of the older 1511 edition. This is shown on the last printed leaf where a slip of paper with the 1538 colophon is pasted over the original 1511 colophon.

REFERENCES: Klebs, *Catalogue of Early Herbals*, 1925: no. 51. • Nissen (BBI): no. 2369. • NUC: 255, 431-4 [NH 0533399].

French editions

2241. French transl., c1500: [HORTUS] Ortus sanitatis | translate de Latin | en Francois.

2 vols. [vol 1] 2°: CLXXV (i.e., 275), [16]ℓ.; [vol 2] 2°: CLXX, [14]ℓ. Bâtarde type. Two columns, 49-50 lines. Five full-page woodcuts (on versos of each volume title, leaf K5, and the section title of the final treatise on urine, one repeated), 540 half-page column-wide woodcuts of plants, animals, and precious stones. 3 woodcut titles in grotesque calligraphic style, numerous calligraphic woodcut

HERBALS: HORTUS SANITATIS

ORTVS SANITATIS, 1500

initials with grotesque human faces throughout. Woodcut printer's device on the last leaf.

VERY RARE. First French edition and the only complete translation of the *Hortus Sanitatis*, printed in Paris by Anthoine Vêrard [see note below]. It is a magnificent monument of early French typography, and one of the finest of the Hortus editions, of which only a few examples are known. The first volume describes the herbs, the second beasts, fishes, and stones, and includes the tract on urine. At the end are extensive indexes.

The fine large woodcuts represent: (1, verso of title leaf and repeated on leaf R1v of the second volume) an ecclesiastical person seated in a chair, with several other figures, one of them presenting a book, (2, leaf K5v) an author presenting his book to King Charles VIII on horseback with other persons engaged in flying hawks, (3, leaf aa1v) apothecary's shop, (4, leaf A1v) human skeleton. The full page cuts 3 and 4 appear to be copied from the original Grüninger cuts, although the text illustrations appear to be derived from the second Latin edition of the *Hortus* (assigned to Strassburg, Prüss, not after 21 October 1497).

Anthoine Vêrard. (BORN: ; DIED: Paris, France, 1513) *French illuminator, wood engraver, printer & bookseller.* Vêrard flourished in Paris from about 1485 to 1512. Scarcely anything is known of his life, other than his shop occupied a series of buildings in Paris, and that he illustrated and published a series of works. He is thought to have illuminated a *Danse Macabre* printed on vellum, of which only two copies exist.

HORTUS SANITATIS, 1529

2242. French transl., 1529: [HORTUS] Hortus sanitatis, translate de latin en francois. Paris, 1529.

Two parts in one volume. [Part 1] 2°: 246, 12l.; [Part 2] 2°: 149, 20 leaves (the last blank). Two columns, Gothic letter, 54 lines. Title printed in red and black, with a fine woodcut (repeated on the title to the second part), large woodcut on the verso of the title leaf, two other large woodcuts (1: human skeleton; 2: apothecary's shop), over 1,000 smaller text woodcuts of plants, animals, birds, precious stones, etc. Woodcut initials. Printer's device (large initial with head and bird).

VERY RARE. Second edition of the French translation of the *Hortus Sanitatis*. It contains nearly the same illustrations as the Vêrard edition. The text cuts reappear with few exceptions, printed from the old blocks, also the skeleton and the apothecary's shop, borrowed by Vêrard from Strassburg. There are also some newly added cuts not copied from any German herbal, but probably derived from some work on chivalry. (Klebs/Becher)

VERY SCARCE. Astonishing study of the underground cataracts, sources, fountains, rivers, artificial rivers, marine tides, currents, abyssals zone, and the situation of the Paradise. The author explains the tides by a water arrival of the abyssals zone which it locates in the polar areas. This work is illustrated in a baroque taste that recalls Kircher's books. It is magnifiquement illustrated by beautiful allegorical frontispice, 4 plates (3 folding), and 22 engravings in the text.

VERY SCARCE. Co-authored with L.C. Houry [see note below]. This work outlines a new method for systematically describing minerals based on 22 characteristics. The introduction provides a description of the method, which stresses practical aspects. Using qualities such as color, hardness, crystal structure, chemical composition, and electrical and magnetic properties over 200 minerals are described on a series of tables. At the close is a dictionary of mineralogical synonyms in French, German and Latin.

HERNÁNDEZ, Francisco. (BORN: Near Toledo, Spain, c1514; DIED: Madrid, Spain, 1578) *Spanish physician & naturalist.*

Hernandez studied medicine at the University of Alcalá. He was a friend of Vesalius and followed his lead in dissecting. One of the early defenders of the lesser circulation. In Mexico City he experimented on the medicinal properties of the local drugs. He did his best to establish a Mexican pharmacology based on local plants. His translation of Pliny contains extensive geographical commentaries. During his final year in Mexico, he was in charge of the battle against the terrible epidemic, *cocoliztle*, that wiped out half of Mexico. He left an important clinical study of the disease. Apparently began his career as physician to the Duke of Maqueda (near Toledo) for a brief time, then practiced several years in Seville.

He occupied the most important medical position in Spain at that time, physician of the hospitals of the Monastery of Guadalupe. He was probably there in the late 60's. This position was virtually the antechamber to the royal chamber. He directed the botanical garden, and botanized in the area. Here also his anatomical studies. When he returned to Toledo apparently about 1567, he was in contact with the court; by about 1568 he became physician to the Chamber of the King.

By order of Philip II, went to Mexico to study the flora and fauna, with particular attention to medicinal properties, 1570-77. While in Mexico he was protomedico for the colony. The two pinnacles of Spanish medicine were the royal chamber and the office of protomedico, both of which he held (the latter for Mexico). Both positions salaried. The expedition to Mexico carried a salary of 2,000 ducats. He dedicated the translation (with commentary) of Pliny to Philip II; this work was not published during his life. When Hernández returned to Spain, his friends at court were no longer in such influence, and Hernández was rewarded for his herculean endeavors largely by indifference. His great natural history was not published as, of course, he had hoped. He left behind

a revealing memorial to the court and a Latin poem to his friend Arias Montano. During his final years he was appointed physician to the young prince who became Philip III. Hernández learned the indian language and translated some of his materials into it because he was convinced the pharmacological information would be useful to them.

VERY SCARCE. **REWORK THIS COMMENTARY**
VERY RARE. This is the first book on plants and
minerals published in the New World. The translator
was Francisco Ximénez [1666-c1722].

The *Quatro Libros* was the first milestone after
the publication of the Index medica-mentorium by
Barrios was a much more substantial text, based on a
manuscript of Recchi's selection. The manuscript itself,
unknown today, had been "signed" by Francisco Valles.
We now know that it belonged, at least as late as 1609,
to Barrios. In 1615 fray Francisco Ximenez saw through
the press *Quatro Libros. De la naturaleza, y virtudes
de las plantas, y animales*. The text of the *Quatro
Libros* is organized into four books, each subdivided into
sections. The first three books are on aromatics, trees,
plants, and fruits; herbs with a sharp taste; herbs that
taste salty or sweet; and herbs that have a bitter taste or
no taste at all; the fourth book deals with animals and
minerals whose derivatives can be used as medicines.
Two tables list illnesses and remedies (not based on the
Index medicamentorum). Altogether the book contains
478 chapters translated into Spanish from Hernandez's
work, with some annotations and additions supplied by
Ximenez. The stated purpose of this book was to be a
handbook for use in places where there was no accessible
pharmacy.

Until the appearance of the Complutense
manuscript, it was not always clear where Hernandez
ended and Ximenez began, because although the editor
was deferential to the author, he would occasionally add
a note from his own experience without distinguishing
it as such. Apart from a frontispiece portrayal of
Saint Dominic, the book has no illustrations, so that
identification of plants with confusingly similar names
is sometimes impossible. A lay hos-pital brother who
arrived in New Spain in 1605, Ximenez worked at some
time in the Hospital de la Santa Cruz, where he was
in charge of the hospital's pharmacy. He apparently
had received no formal medical training, but he did
write a book, *Memoria para la salud*, now lost. His
only tangible contribution to the history of medicine is
thus his edition of Hernandez.

The Huntington Library copy of the *Quatro
Libros*, which Henry Harisse bought in Paris in 1871, is
not only in exceptionally good condition for a handbook
that was meant to be used frequently: it is also
annotated. The ink has faded, but the barely legible
annotations reveal that someone wrote in the margins,
in Spanish, key words, mostly indicating parts of the
body that are mentioned in the text. Clearly, the

annotations were meant to serve as a quick finding aid
for practical purposes, and so they confirm exactly what
the book was intended to do.

We do not know the extent of the print run of
the *Quatro Libros*, but it was probably small-perhaps
a few hundred copies-as most Mexican imprints of its
time seem to have been. Copies of the *Quatro Libros*
have always been rare, especially in Europe, where, as
we shall see, only one or two copies turned up in the
seventeenth century. They were promptly put to good
use.

VERY SCARCE. **REWORK THIS ENTRY.** Book
10 (pp. 335-344) of this work concerns minerals. It
provides a glossary and description with Aztec name
and a Latin equivalent. There are no illustrations.

The earliest published version of Hernandez's
great natural history of Mexico appeared in Spanish
translation, unillustrated, at Mexico City in 1615. The
Latin edition, with considerable additions to the text as
well as numerous illustrations, was prepared in Rome by
the Accademia dei Lincei and was first printed in 1628,
but only a few copies had been distributed when its
patron, Prince Federico Cesi, died, leaving the project
without funds. Due to the efforts of Francesco Stelluti
of the Accademia dei Lincei, who succeeded in obtaining
the patronage of the Spanish ambassador in Rome,
Don Alfonso Turiano, publication was revived and the
original sheets were reissued in 1648, 1649 and 1651.
The present copy is the last of these issues in terms
of the title-pages; however it retains the three original
dedications to Cardinal Barberini, which were cancelled
in some copies, and has in addition the dedication to
Roderico de Mendoza which was substituted for the
third of them. There are numerous 'complexities of the
bibliography and the printing of the Lyncei edition, for
such it remains ... The compiler has not seen nor heard
of any two copies which are exactly alike in arrangement
or in the presence or absence of the name Barberini in
the dedications' (Arents).

Hernandez, physician to Philip II of Spain, was
sent in 1570 to study the flora and fauna of Mexico,

where he worked until 1577. His researches remained
unpublished at his death in 1587 and his successor as
royal physician, Leonardo Recchi, was entrusted with
the task of examining anew the mass of materials left
by Hernandez and of preparing a suitable abridgement
for the press. Recchi in turn died before he was able to
publish his work, but it is his rendering of Hernandez
that was used for the 1615 Spanish translation and
which forms the basis of the Rome edition: 'with
its brilliant appended treatises, it was here at last
that Hernandez's work received the recognition that it
deserved. Though only a small part of all that he had
written, it is a monument of industry and erudition, the
more remarkable as being the first on the subject, and
even today it still holds its place as a book of the highest
authority. Hernandez was henceforward referred to as
'the third Pliny'' (Hunt).

Facsimile reprint, 1992: *Rerum Medicarum Novæ
Hispaniæ Thesaurus.* Romæ Ex Typographeio Vitalis
Mascardi, 1599. Ristampa anastatica, Roma, 1992.

Abstracted English transl., c2000: *The Mexican Treasury.
the Writings of Dr. Francisco Hernandez.* By Simon Varey,
editor. Stanford, Stanford University Press, c2000. 4^o:
xix, 281 p., frontispiece (map), 64 illustrations. ISBN
0804739633.

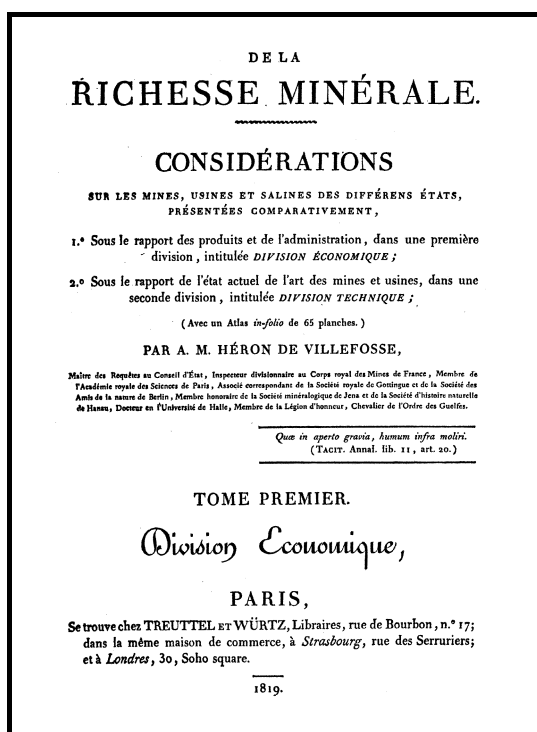

This volume consists of a selection of English
translations from the extensive writings of Dr. Francisco
Hernandez [1515-1587]. Celebrated in his own day as
one of Spain's leading physicians and naturalists, he is
now best remembered for his monumental work on the
native plants and materia medica of central Mexico. Sent
to New Spain in 1570 by King Philip II to research
and describe the natural history of the region, to assess
the medical usefulness of the natural resources, and
to gather ethnographic materials for an anthropological
history, Hernandez was the first trained scientist to
undertake scientific work in the New World. For seven
years he gathered information throughout the Valley of
Mexico, learning Nahuatl, recording local medical customs,
studying indigenous medicines, and writing down all his
observations. The result was *The Natural History of New
Spain*, written in Latin, which consisted of six folio volumes
filled with descriptions of over 3,000 plants previously
unknown in Europe (along with descriptions of a much
smaller number of animals and minerals) and ten folio
volumes of paintings by Mexican artists illustrating the
plants and animals he described.

 "Errata."; [At end], Large folding colored map, "Carte Du
 Royaume De Westphalie.";

[Vol 2] [2 pgs], Half title page, "De | La Richesse
 Minérale," verso blank.; [2 pgs], Title page, verso blank.;
 [i]-ii, "Avertissement."; iii-xvi, "Table Des Matières."; [1]-
 559, Text.; [1 pg], Blank.

[Vol 3] [2 pgs], Half title page, "De | La Richesse
 Minérale," verso blank.; [2 pgs], Title page, verso blank.;
 [i]-xx, "Table Des Matières."; [1]-526, Text.; 527-538,
 "Table Alphabétique."

[Atlas] [2 pgs], Title page, verso blank.; Plates 1-65.

RARE. The most significant work on the mines
 and the metallurgy at the beginning of the 19th century.
 The first volume describes the mines and the factories
 of Germany and other countries of Europe. The second,
 techniques of exploitation of the mines. The third,
 techniques of ore processing and metallurgy. A very
 large folio Atlas supplements the work. It is illustrated
 by a beautiful engraved title and 65 plates engraved by
 Weiss and Baltard and 3 double-page maps. A great
 number of these plates have extendible and moving
 parts attached. The title page of the atlas says that it
 describes the mineral richness, collection of geognostic
 and industrial facts, noting the current state of art of
 the mines and the factories. The work was begun in
 1810 and lasted for nine years.

A superbly produced atlas which belongs to Héron
 de Villefosse very scarce work 'De la richesse minérale,
 considérations sur les mines, usines, saline etc. Paris
 1810-1819. The first large double-page map has the
 following title 'Carte des pays entre l'Elbe et le Rhin
 suivant le cours du Weser, indiquant la situation des
 mines, usines, salines, carrières et autres ateliers relatifs
 à la richesse minérale; the second large double plate
 'Carte des montagnes du Hartz (Bergmännische Karte
 vom Harz)', the third large double-plate 'Carte des
 montagnes métallifères qui séparent la Saxe de la
 Bohème (Bergmännische Karte vom Erzgebirge)', the
 other plates show plans of mines, machinery etc.

Prospectus, 1811: *De la Richesse minerale, par Mr. Heron
 de Villefosse.* Extrait par M. Patrin. Paris, J.-B. Sajou,
 1811. 8^o: 44 p. Rare.

VERY RARE. Translation by CARL HARMANN of *De La Richesse Minérale* (Paris, 1819). The rare text volumes consist of translations of Héron de Villefosse's text, together with two volumes of supplements published 1839-40. According to the register, only 117 copies of this translation were ordered in advance. The exceptional atlas illustrates the main volumes and provides extraordinary and faithful plates. These renderings show mining instruments, profiles of silver mines, mills, crushers, various steam engines, mercury distilling furnaces, etc. With the supplements 20 additional plates were prepared which are almost always missing.

HESSEL

HESSEL, Johann Freidrich Christian. (BORN: Nuremburg, Germany, 27 April 1796; DIED: Marburg, Germany, 3 June 1872) *German physician, crystallographer & mineralogist.*

Hessel attended the industrial school in Nuremburg, before studying science and medicine at Erlangen and Würzburg. He received his M.D. in 1817. At the University of Munich, he continued his studies and came into contact with K.C. VON LEONHARD who convinced Hessel to become his assistant when the former took a position at the University of Heidelberg. There, Hessel developed his mineralogical skills, obtaining his Ph.D. in 1821. Then he was called to Marburg where he accepted a position as associate professor of mineralogy and mining technology. In 1825, he was appointed a full professor, a position he kept until his death. Over his career he published over 40 books and papers on a wide range of subjects, but it was not until many years after his death that the importance of the *Kristallometrie* [described below] was recognized.

VERY RARE. This is the first separate publication of Hessel's proof of the existence of only thirty-two symmetry crystal classes, by establishing the fact that only two-, three-, four- and sixfold axes can occur. Hessel obtained his results from an exhaustive physical analysis of the possible types of symmetry that any geometrical form might possess. It was first published as an article titled "Krystall" in *Gehler's physikalisches Wörterbuch* (Leipzig, 1830). Its importance was immediately recognized by Gehler [see note below], who arranged its publication as a separate work, and added an appendix on the formation of crystals. Unfortunately, this attention did not gain Hessel's theorem the recognition of his contemporaries, and the discovery of this fundamental principle of crystal symmetry is generally attributed

to the elegant mathematical derivation published by AUGUSTE BRAVAIS in the mid-1850's, even though the forgotten work of MORITZ LUDWIG FRANKHEIM predates both Hessel and Bravais.^[1] This is Hessel's most important scientific work and priority over Bravais was overlooked until LEONHARD SOHNCKE drew attention to its importance in 1891.^[2]

HEULAND, John Henry. (BORN: 1778; DIED: Hastings, Sussex, England, 16 November 1856) *English mineral collector & dealer*.

Heuland was the nephew of the mineral dealer Jacob Forster [see note under Romé de l'Isle], whose collection he inherited. Subsequently the collection was sold to Charles Hampden Turner, that was later incorporated into Henry Ludlam's, now in the Museum of Practical Geology, London. Heuland was elected to the Geological Society of

HIÄRNE

London in 1813, becoming its foreign secretary from 1818 to 1828. The mineral "Heulandite" named for him by H.J. Brooke in 1822.

2264. — Auction Catalogs, 1808-1849.

Henry Heuland's influence on mineral collecting in 19th century England was enormous. His ability to bring to market a constant flow of fine mineral specimens from all parts of the world prompted every major English collector of the time to be a regular visitor to his shop. Probably beginning in 1808, Heuland held the first of a long series of mineral specimen auction sales that would extend to the end of his career. All but one of the London sales was held in the "Great Rooms" of the auction company in King Street, Covent Garden founded around 1759 by the bookseller Samuel Paterson. These auctions would leave as a legacy a run of very rare sale catalogs that described the specimens that were for sale. A listing of the known sales is given below.

- 1808, March 16-19 & 21-32: 57 p., 700 lots sold by King & Lochée.
- [1809], from Russell (1950).
- 1812, May 4-7 & 11-14: 80 p., 1127 lots sold by Christie.
- 1815, April 24-30: 820 lots sold by King & Lochée.
- 1815, June 9-10: 44 p., 820 lots sold by King & Lochée.
- 1816, [Part I] March 25-30: 46 p., 748+9 lots sold by King.
- [Part II] April 1-5: 34 p., 600 lots sold by King.
- [Part III] April 22-27: 46 p., 816+2 lots sold by King.
- 1820, May 1-6: 39 p., 775+3 lots sold by King.
- 1821, April 30: sold by King.
- 1824, April 30-May 1, 4-5: 35 p., 602+2 lots sold by Dubois. Specimens from the collection of Marquis de Dree were included.
- 1825, November 11: 15 p., 211+78 lots sold by Thomas.
- 1826, April 10-15: 59 p., 1150+22 lots sold by Thomas. Specimens from the collection of Marquis de Dree were included.
- 1826, May 1-3: 27 p., sold by Thomas.
- 1826, July 25: from Russell (1950).
- 1829, May 4-9: 60 p., 1020 lots sold by Thomas.
- 1830, May 10-12: 37 p., 1020 lots sold by Thomas.
- 1830, May 31-June 2: 39 p., 510+3 lots sold by Thomas.
- 1831, May 2-5: 50 p., 714+1 lots sold by Thomas & Stevens.
- 1832, May 14-17: 50 p., 715 lots sold by Thomas & Stevens.
- 1833, April 29-May 4: 73 p., 1200+6 lots sold by Thomas & Stevens.
- 1834, April 14-16: 40 p., 610+3 lots sold by Thomas & Stevens. Included were specimens from the collection of the Dowager Countess of Aylesford.
- 1834, May 5-9: 56 p., 840+2 lots sold by Stevens. Included were specimens from the collection of the Dowager Countess of Aylesford.
- 1835, May 11-15: 59 p., 1002+7 lots sold by Stevens. Included were specimens from the collection of the Dowager Countess of Aylesford.

- 1836, May 2-6: 58 p., 1000 lots sold by Stevens. Included were specimens from the collection of the Dowager Countess of Aylesford.
- 1837, April 28: 10 p., 200 lots sold by Stevens.
- 1837, June 12-16: 59 p., 1002+7 lots sold by Stevens. Included were specimens from the collection of the Dowager Countess of Aylesford.
- 1837, December 11-12: 500 lots sold by Stevens.
- 1838, May 14-17: 47 p., 837+1 lots sold by Stevens. Included were specimens from the collection of the Dowager Countess of Aylesford.
- 1838, June 20: sold by Stevens.
- 1839, February 18-19: 34 p., 407+16 lots sold by Stevens.
- 1839, May 13-18: 1048 lots sold by Stevens.
- 1840, May 4-7: 630 lots.
- 1841, January 12-13.
- 1841, May 10-11: 456 lots.
- 1842, May 9-12: 821 lots. Included were specimens from Mr. Hazelwood's collection.
- 1843, May 15-17: 600 lots.
- 1844, May 13-14: 420 lots.
- 1844, July 16: 222 lots.
- 1846, February 16-17: 400 lots.
- 1846, May 18-22: 1002 lots. Gerhard Troost of Philadelphia was a major purchaser at this sale.
- 1847, May 15-16: 400 lots.
- 1847, June 14-15: 400 lots.
- 1848, April 14: 200 lots.
- 1849, June.

See: Lévy, Armand.

HIÄRNE (Hjärne), Urban. (BORN: Skworitz, Ingermanland, Sweden, 20 December 1641; DIED: Stockholm, Sweden, 22 March 1724) *Swedish physician & polymath.*

At the age of five, Hiärne began his studies with private tutors. He then attended in Nyen what was called a trivial school where he studied logic, rhetoric, poetry, grammar, Swedish, German, Latin, Greek, Russian and music. In 1657 he decided to study at Uppsala, and in 1658 moved to Stockholm where he was employed as a teacher. At this time, Hiärne decided to study medicine at Uppsala. To support his University education, he painted portraits, and wrote numerous poems and plays, some of which were performed. He taught himself chemistry. He completed his studies at Uppsala before 1666. He then became personal physician to the governor-general of Livland, which enabled him to study abroad in Holland, England and France. He eventually took his degree in medicine from Angers in 1670. Three years of study in Paris provided him with a good foundation in analytical and experimental chemistry. Hiärne was a dedicated Paracelsian, and his work in chemistry was directed to supporting Paracelsianism. In 1674, he settled in Stockholm, where he opened a medical practice. For a long time he was Sweden's leading authority in medicine, and his practice became very profitable.

Booktryckerijet/ hoos Sal. Wankijfs Änckia.

4°: A-C⁴; 12ℓ.; no pagination or foliation. PAGE SIZE: 190 x 150 mm.

CONTENTS: A1r, Title page.; A1v-A2v, "Bewägne Läsare!"—signed Urban Hjärne.; A3r-C4v, "Förste Delen." [=text of questionnaire].

VERY RARE. An important contribution to mineralogy, which focused the activities of other Swedish researchers to the chemical analysis of minerals and mineral waters. Many subsequent naturalists considered this work to be one of the key publications setting mineralogy on a chemical foundation. The monograph describes the results of various analyses on stones and mineral waters that Hjärne performed. For example, he notes that carbon dioxide evolves from some minerals after treatment with acid. Underlying the descriptions is a classification showing elements of a traditional type. The author distinguishes seven divisions: water, earths, stones, metals, semi-metals, salts and sulphurs. Other subdivisions are noted under some of these categories including common stones, precious stones, figured stones, useful stones, and stones derived from animals.

Contents of the three "editions" above are the same, although with small differences in spellings here and there and to the layout due to the differences in page format. There is a short introduction signed Urban Hjärne (4 p. in the 8°, 3 p. in the 4° and 2 p. in the folio). "En kort anledning..." is a questionnaire in 13 short chapters, each inquiring into the local existence of different parts of the Regnum Minerale such as water, landscape, soils, rocks, common stones, useful stones, gems etc. sent out to the Swedish provinces by Hjärne. Kort Memorial is an abridged reminder of the previous since, as it states, "En kort anledning" ... hasn't met too much response ... especially not from the clergy. The intention was to publish the answers received with comments in parts corresponding to each of the 13 questions/chapters. Two parts (Hjärne used the Swedish word flockar - flocks) of these were published, *Den Korta Anledningen* (1702) and *Den Beswarade och Förklarade Anledningens* (1706), the former treating water and the latter about the earth and landscapes in general.

This work was also reprinted in the first supplement to FRANZ ERNST BRÜCKMANN's *Magnalia Dei in Locis Subterraneis* (Wolfenbüttel, 1734) [which see]. [Entry by Johan Kjellman]

Den | Beswarade och Förklarade | Anledningens | Andra Flock/ | Om | Jorden och Landskap | i gemeen. | [globe vignette] | Stockholm / | [decorative rule] | Anno 1702 | Tryckt af Mich. Laurelio, Anno 1706.

2 vols. [VOL 1: 1702] 4°: [8], 132 p., frontispiece (inscribed "Sola Dei placent Magnalia, cætera Sperno" and inserted after the title page in some copies), one folded plate (at p. 50, in some copies this plate occurs at p. 150 in the second part). Woodcuts on pages 99, 102, & 127-8 (2 in full-page). Two states of the first volume exist. The earliest (?) where there are vignettes on the first text leaf, the other without vignettes. [VOL 2: 1706] 4°: [4], 133-416 p., three plates (at pages 165 folded, 279 folded, 408). Woodcut illustrations on pages 173 (full-page) & 225.

RARE. Introduction is signed Urban Hiärne. In this work, which contains much topographical information, Hiärne followed the pattern of the Englishman Robert Plot's landscape descriptions and laid the foundation for a natural history of Sweden, with emphasis on geology.

HILL, John. (BORN: Petersborough, England, c1707; DIED: London, England, 21 November 1775) *English apothecary & naturalist*.

Hill calling himself "Sir John" on account of his knighthood in the Swedish order of Vasa flourished as an apothecary and quack doctor in James Street, Covent Garden. He conducted the *British Magazine* from 1746 to 1750 and contributed articles to various other periodicals. He vigorously attacked the Royal Society, which steadfastly ignored Hill's scientific contributions. He was a prolific author of compilations and translations dealing with medicine, botany, horticulture and natural history. His most celebrated contribution was *The Vegetable System* (London, 1759-75).

NATURAL HISTORY OF FOSSILS, 1748

2269. — English, 1748 [First edition].

A General | Natural History: | or, | New and Accurate | Descriptions | of the | Animals, Vegetables, and Minerals, | of the Different | Parts of the World; | with | Their Virtues and Uses, as far as hitherto certainly | known, in Medicine and Mechanics: | Illustrated | By a General Review of the Knowledge of the Ancients, and the | Discoveries and Improvements of later Ages in these Studies. | Including | The History of the Materia Medica, Pictoria, and | Tinctoria, of the Present and Earlier Ages. | As also | Observations on the neglected Properties of many valuable Substances known at present; | and Attempts to discover the lost Medicines, &c. | of former Ages, in a Series of Critical | Enquires into the Materia Medica of the Ancient Greeks. | With | a great Number of Figures, elegantly engraved. | [rule] | By John Hill. | [rule] | London: | Printed for Thomas Osborne, in Gray's-Inn, Holbourn. | [rule] | M.DCC.XLVIII.

2°: π^2 A² a² B-Z² 2A-2Z² 3A-3M² 4O-4Z² 5A-5Z² 6A-6Z² 7A-7I² 26A-26Z² 27A-27Z² 8A-8E²; 352 ℓ .; [12],

1-228, 333-592, 457-654, [6] p., folding table (facing page 1), 12 engraved plates. Pages 457 to 592 are repeated in the sequence. PAGE SIZE: 358 x 228 mm.

CONTENTS: [2 pgs], Half title page, "[rule] | A | History | of | Fossils. | By John Hill. | [rule]," verso blank; [2 pgs], Title page, verso "Contents of the Volumes. | ..."; [2 pgs], Dedication to Doctor Shaw, signed John Hill; [6 pgs], "The Preface."; Folding table.; 1-422, "The | History | Of | Fossils. | Part the First. | ... | Fossils naturally and essentially simple, not inflammable, nor soluble in water."; 423-592, 457-621, "The | History | Of | Fossils. | Part the Second. | ... | Fossils naturally and essentially compound, not inflammable nor soluble in water."; 622-637, "The | History | Of | Fossils. | Part the Third. | ... | Metallic Fossils."; 638-654, "Appendix | To The | History Of Fossils. | Of animal and vegetable substances bury'd in the earth."; [6 pgs], "Index."

PLATES: All the plates of the volume have an included description and each shows minerals, crystals or fossils. All plates except the first are signed B. Cole Sculp. The table and plates of the volume comprise: Folding table, p. 1, "Table of Fossils." Plate I, p. 110, "Talc and Fibrariae" (14 figs.). Pl. 2, p. 152, "Selenitae" (19 figs.). Pl. 3, p. 200, "Crystals" (48 figs.). Pl. 4, p. 544, "Siderochita" (23 figs.). Pl. 5, p. 621, "Pyritae" (17 figs.). Pl. 6, p. 640, "Vegetable Bodies Immers'd In Stone" (14 figs.). Pl. 7, p. 642, "Fossile Corals" (17 figs.). Pl. 8, p. 644, "Fossile Teeth, Palates, Vertebræ & Whole Fish" (+40 figs.). Pl. 9, p. 646, "Fossile Shells" (27 figs.). Pl. 10, p. 648, "Fossile Shells" (+40 figs.). Pl. 11, p. 650, "Fossile Shells" (+40 figs.). Pl. 12, p. 654, "Fossile Bodies, Once Parts of Animals" (+40 figs.).

VERY SCARCE. This is the first volume of Hill's three volume treatise, *A General Natural History*, which described nature's three realms, i.e., mineral, plant and animal. In the present work, *A History of Fossils*, minerals are divided into series, classes, orders, genera and the analog of species. They are then described according to their behavior in fire and acid, their cleavage or lack thereof, their surface texture, and their appearance under the microscope. An interesting feature of the book arises from the odd naming of the various species. Hill invented a unique nomenclature that took a mineral's distinguishing properties, and recast them into their Greek equivalents to form descriptive polysyllabic names, which is very useful if one is conversant in Greek. Unfortunately, even in Hill's time, the lay public and probably most of the scientific community were ignorant of the language, and therefore of the author's innovation. As a consequence, the valuable contributions this work made to microscopic mineral examination and to descriptive mineralogy in general had less impact on the science than they deserved.

Occasionally, a very rare copy of Hill's *History of Fossils* is found with the plates hand-colored. A note on the back of volume three's title page states, "There are a small number printed for the curious on Royal Paper; and the cuts of these are colored under the immediate inspection of the author." Exercise caution, however, when examining such copies because the plates may not have been originally colored. Sometimes the "faked" volumes can be recognized due to the whimsical colorings of the figures, but normally comparison with an authenticated copy is necessary.

FOSSILS, 1771

2272. — English, 1771.

Fossils | Arranged | according to their | Obvious Characters; | with their | History and Description; | under the Articles of | [In two columns, separated by a double verticle rule:] Form, | Hardness, | Weight, [double verticle rule] Surface, | Color, and | Qualities; | The Place of their Production, | Their Uses, | and | Distinctive English, and Classical

Latin Names. | [rule] | By J. Hill, M.D. | Member of the Imperial Academy. | [rule] | London: | Printed for R. Baldwin, in Pater-noster Row; | and P. Elmsly, in the Strand. | [rule] | M.DCC.LXXI.

8°: [A]-F⁴ G² H-Q⁴ R⁸ S-Z⁸ 2A-2Z⁴ 3A-3H⁴ 3I²; 220ℓ.; [i]-viii, 9-51, 56-132, 133*-140*, 133-420, [16] p., one folding table (p. 122). PAGE SIZE: 212 x 128 mm.

CONTENTS: [i-ii], Title page, verso blank.; [iii]-viii, "Introduction."; 9-198, "Native Fossils."; 199-420, "Part II. Compound Fossils. Form'd by Mixture of Two, or more Native, Earthy Kinds."; [16 pgs], "Index."

VERY SCARCE. One of the rarer of the author's many publications in which minerals and physical properties such as hardness, color, weight, surface texture and uses are arranged in a series of tables. The large folding diagram outlines the intricate system employed to distribute the minerals. The purpose was to lay down an arrangement of minerals and fossils founded upon their obvious characteristics, such as form, hardness, weight, surface, color, localities, use, without need of chemical experiments. Hill proposed using the outward qualities of a mineral exclusively, and these were determined by sight, smell, taste and touch. The text makes heavy use of tables to organize the characteristics of each species, and it is clear that Hill did not require all features to be defined for a given mineral. For example, sulfur is said to have a distinct odor. For each species, the author has provided synonyms to Wallerius, Bomare, Linneaus and his earlier *History of Fossils* (London, 1748). In this work, Hill anticipated Werner in the use of physical characters to distinguish between mineral species; however, his text is so convoluted and irregular that it is difficult to derive a true picture of the system Hill is proposing.

HILTON, Harold. (BORN: Ickham, Kent, England, 22 October 1876; DIED: after 1962) English mathematician & crystallographer.

From 1895 to '98, Hilton studied at Oxford, eventually receiving his D.Sc in 1913. In 1902, he became assistant lecturer in mathematics at the University of Banger, in North Wales. In 1907, he accepted a position as assistant professor of mathematics at Bedford College, London. Finally, in 1912, Hilton became professor of math at the University of London where he remained the rest of his career.

8°: π^6 B-R⁸ S² T¹; 137 ℓ .; [i]-xii, [1]-262 p., folding table, diagrams. PAGE SIZE: 218 x 142 mm.

HINTZE

CONTENTS: [i-ii], Title page, verso "Henry Frowde, M.A. | ..."; iii-iv, "Preface."—dated 16 April 1903.; v-xii, "Contents."; [1]-259, Text.; 260-262, "Index."

SCARCE. This work collects together the results of various mathematical theories of crystallography, which had not previously been published in English. Through a careful examination of their properties, Hilton was able, with minor adjustments, to derive in a simple manner the 32 point groups and the 230 space groups. However, no practical applications of the results obtained are included. Hilton provides a full account of the geometrical theory of crystal structure as outlined by Bravais, Jordan, Sohncke, Fedorov, Schoenflies and Barlow.

HINTZE, Carl Adolf Ferdinand. (BORN: Breslau, Germany, 17 August 1851; DIED: Breslau, Germany, 28 December 1916) *German mineralogist.*

Hintze attended the schools of Breslau before entering the city's university. In 1872 he became assistant to the crystallographer P. GROTH, then at the University of Strasbourg. In the fall of 1880, Hintze took a position as scientific consultant to the mineral dealing establishment of F.L.R. KRANTZ in Bonn. In 1884, he also accepted a position as instructor of mineralogy and crystallography at the University of Bonn. In 1886, he accepted a similar post at his alma mater, the University of Breslau. There in 1892, after the death of F. Roemer, Hintze was appointed professor ordinary and director of the *Mineralogische Instituts*. He remained in that position the remainder of his life.

VERY SCARCE. One of the great, monumental classics of mineralogical literature. In the first American notice of this work, Edward S. Dana prophetically wrote, "The publication of the first part of a new Descriptive Mineralogy which promises to be, when completed, the most exhaustive work ever written, is an event of no small importance to those interested in the science" [See: *American Journal of Science*, **38** (1889), 251].

No other mineralogical work has ever achieved the encyclopedic nature of Hintze's masterpiece. Individual descriptions of minerals give first the crystallographic characters, axial ratios, lists of forms, calculated angles. The physical characters and optical properties are then elaborated upon with full references to the original papers. The mineral is then given an exhaustive historical review with careful attention to its name, composition and earlier researchers. A general statement on the species occurrence follows, with a very detailed discussion of all important localities, an account of the crystals forms from each and references to the authors who have treated them. The figures of crystals are scattered through this part of the text as referred to. An account of the artificial mineral and an exhaustive list of previous analyses, including alteration products, closes the species descriptions. Seemingly, nothing is left to conjecture as there appears to be little attempt at condensing the descriptions, and this adds to the authority of the work, with many individual mineral descriptions running several pages.

The *Handbuch der Mineralogie* was published as a sequence of parts. The first section of volume two was the first to appear in 1889 with the volume finally being completed in 1897; this part describing the silicates and titanites was completely the work of Hintze. Thereafter, the sections for volume one began to make their appearance. After Hintze's death in 1916, Gottlob Linck took over the editing of volume one, parts 3 and 4, which was eventually completed in 1933. Described below are several *Ergänzungsband* which were published in an effort to keep this massive work current.

Gottlob Eduard Linck. (BORN: Oetisheim, Württemberg, Germany, 20 February 1858; DIED: Jena, Germany?, 1947) *German crystallographer*. From 1879 to 1883, Linck studied in Stuttgart, Strasbourg, and Tübingen. In 1883, he received his Ph.D. from the University of Strasbourg. In Strasbourg, he became assistant for mineralogy (1885-94), professor extraordinary (1894) and from 1894, professor ordinary in mineralogy and

HINTZE

geology at the University of Jena.

8°: [i]-iv, [1]-760 p., 98 illus. π^2 1-478 484; 382 ℓ . PAGE SIZE: 230 x 155 mm.

CONTENTS: [i-ii], Title page, verso copyright notice.; [iii]-iv, "Vorwort."; [1]-759, "Neue Mineralien (alphabetisch geordnet)."; 760, "Berichtigungen" and a list of authors to the articles.

VERY SCARCE. To insure that Hintze's *Handbuch der Mineralogie* would remain current, Gottlob Linck periodically published supplemental volumes describing all the new minerals and correcting mistakes of the former volumes. These descriptions were not nearly as comprehensive as Hintze's originals, although they did follow the same format. In this supplement nearly 800 species are arranged alphabetically.

VERY SCARCE. After the death of Gottlob Linck and a span of 16 years, the publisher's enlisted K.F. Chudoba [see note below] to write another supplement to Hintze's *Handbuch der Mineralogie*. The format has been significantly changed.

Karl Franz Johann Chudoba. (BORN: Writzow, Czechoslovakia, 10 September 1898; DIED: Bonn, Germany, 14 March 1976) *Czech mineralogist & crystallographer*. Chudoba was an assistant in the Museum of Natural History at the University of Vienna, before becoming a professor of mineralogy at the University of Freiberg-am-Breisgau (1926-8). Subsequently, he was appointed professor of mineralogy at the University of Bonn (1928-68). Chudoba applied himself principally to the study of German minerals, but also wrote a papers on the minerals of Madagascar, Brazil and Southwest Africa.

HISINGER, Wilhelm. (BORN: Skinnskatteberg, Västmanland, Sweden, 22 December 1766; DIED: Skinnskatteberg, Västmanland, Sweden, 28 June 1852) *Swedish mineralogist, chemist, geologist & palaeontologist.*

Hisinger was a wealthy landowner and proprietor of a foundry, and for amusement, he worked privately as a scientist. In 1803, together with J.J. BERZELIUS he is credited with the discovery of the element cerium. Hisinger researched the electrolysis of salts and found the amount of decomposition proportional to affinity of compound components and to surface contact with the conductor. The extensive mineralogical and geological collections he accumulated during his lifetime were bequeathed to the Swedish Natural History Museum in Stockholm.

SCARCE. An early and important work on the geology of Sweden. Zittel writes that "this work contains a historical review of all the facts known of Swedish rocks up to that date, and applied Werner's systematic arrangement." After a general introduction, with descriptions of the most common rock-types and their geographical distribution, the text starts with separate chapters each covering a province of Sweden (the north is not treated). The general petrography is followed by short descriptions of the mines known to the region and their minerals. Provinces covered are Dalarne, Vestmanland, Upland, Södermanland, Nerike, Vermeland, Dahlsland, Vestergöthland, Östergöthland, Småland, Skåne

and Gottland. The plates show a cross-section and various maps of the Swedish country. [Entry by Johan Kjellman]

HITCHCOCK, Edward. (BORN: Deerfield, Massachusetts, U.S.A., 23 May 1793; DIED: Amherst, Massachusetts, U.S.A., 27 February 1864) *American geologist.*

Hitchcock was educated as a clergyman, and from 1824 to 1845 he was professor of natural history and chemistry at Amherst College, becoming president of the institution from 1845 to 1855. He then took an appointment as professor of geology from 1855 to 1864. At various times he was the State Geologist of Massachusetts and Vermont. He is best remembered for his work on glacial drift and the fossil footprints of the Connecticut Valley.

REPORT ON THE GEOLOGY, 1833

2295. — English, 1833 [First edition].

Report | On The | Geology, | Mineralogy, Botany And Zoology | Of | Massachusetts. | Made And Published By Order Of the Government Of | That State: | In Four Parts: | Part I. Economical Geology. | Part II. Topographical Geology. | Part III. Scientific Geology. | Part IV. Catalogues Of Animals And Plants. | With A Descriptive List Of The | Specimens Of Rocks And Minerals Collected For The | Government. | Illustrated By Numerous

HLAWATSCH

Wood Cuts And An Atlas Of Plates. | By Edward Hitchcock, | Professor of Chemistry and Natural History in Amherst College. | [rule] | Amherst: | Press Of J.S. and C. Adams. | 1833.

8°: [i]-xii, [1]-692 p.

CONTENTS: [i-ii], Title page, verso blank.; [iii]-v, "Introductory Or Historical Note."; [vi]-xii, "Contents."; [1]-652, Text.; 653-678, Appendix, "Catalogue of Specimens in the Government Collection of Rocks and Minerals."; 679-692, Index.

SCARCE. This is the first report prepared by Hitchcock of the geology, mineralogy, botany and zoology of Massachusetts. The text is divided into four parts with the (I) Economical Geology taking pages 1-72, followed by (II) Topographical Geology (pp. 73-110), (III) Scientific Geology (pp. 111-542) and (IV) Catalogues of the Animals and Plants on pages 543-652. Throughout the text there are numerous references to the minerals and mineral deposits found within the state. It was followed by several other publications on the subject [which see entries below].

The "Atlas of Plates" referred to on the title page almost never accompanies the text volume. It appears to have consisted of a few pages of text together with a large 240 x 300 mm. folding colored(?) map of the state of Massachusetts.

2296. 2nd edition, 1835: Report | On The | Geology, | Mineralogy, Botany And Zoology | Of | Massachusetts. | Made And Published By Order Of the Government Of | That State: | In Four Parts: | Part I. Economical Geology. | Part II. Topographical Geology. | Part III. Scientific Geology. | Part IV. Catalogues Of Animals And Plants. | With A Descriptive List Of The | Specimens Of Rocks And Minerals Collected For The Government. | Illustrated By Numerous Wood Cuts And An Atlas Of Plates. | Second Edition, Corrected And Enlarged. | By Edward Hitchcock, | [...3 lines of titles and memberships...] | [rule] | Amherst: | Published By J.S. And C. Adams. | 1835.

[Text] 8°: [1]-702 p. [Atlas] 4°: 19 p., one folding map (240 x 300 mm. of the State of Massachusetts).

VERY SCARCE. Second slightly enlarged edition of the 1833 text. Again the Atlas called for on the title page is a very seldom encountered book.

REFERENCES: NUC: ??, ?? [NH ??????????].

2297. — English, 1838.

Report | On A | Re-Examination | Of The | Economical Geology | Of | Massachusetts. | [rule] | By Edward Hitchcock, | Professor Of Chemistry And Natural History In Amherst College. | [rule] | Boston: | Dutton And Wentworth, State Printers. | | 1838.

8°: [1]-139, [1] p.

CONTENTS: [1]-2, Title page, verso blank.; [3]-4, "Contents."; [5]-139, Text, signed Edward Hitchcock, 1 April 1838 on page 139.; [1 pg], Blank.

VERY SCARCE. Describes the soils, marls, clays, limestone, sands, salt, lime, fossil fuels, metallic ores including magnetite, chromite, galena, and sphalerite, feldspars, slate and serpentine found in the boundaries of the state of Massachusetts.

2299. — English, 1861.

Report on the Geology of Vermont. Descriptive, theoretical, economical and scenographical ... In Two Volumes. Claremont, N.H., Claremont Manufacturing Co., 1861.

2 vols. [VOL 1] 8°: viii, 9-558 p., 289 illus. [VOL 2] 8°: [6], 559-988 p., illus. 290-365, 38 plates, including a hand-colored geological map of Vermont, cross-sections, views, etc.

VERY RARE. A famous book noted for its fine illustrations and accurate text. The hand-colored map showing the geology of Vermont is the first of the state. The work was printed in a small edition, however. Only 30 copies were given to private individuals and some others to State Colleges making this set a scarce item, and perhaps Hitchcock's rarest publication.

VERY SCARCE. A derivative history of botany, mineralogy and geology, published as one volume in a general series of books detailing the history of science. The first portion (pages 1-287) is a history of botany, from antiquity through the modern age. The history

HISTOIRE DE LA BOTANIQUE, 1872

of mineralogy is covered in the section (pages 288-356). It describes the precious stones known to the ancients, the first theories of fossils, history of research on igneous rocks, the story of topographical mineralogy, meteorites, and discoveries in crystallography. The final section details the evolution of geology (pages 357-408). It gives the story by looking at the geological theories of Burnet, Whiston, Woodward, Steno, Leibnitz, and Buffon. Other sections describe volcanism, neptunism, Werner's theories, theory of metamorphism, and the rise of modern paleontology.

Werners Leztes Mineralsystem."; [1 page], "Noch einige Berichtigungen."; [i], "Abraham Gottlob Werner's Leztes Mineral-System."; [ii], Blank.; [iii]-xiv, "Vorbericht."; [1]-26, "Mineral-System."; [27]-58, "Anmerkungen."

VERY SCARCE. This work is one of the greatest encyclopedias of Werner's mineral theories ever published. It was the only authorized publication of Werner's mineral system. It was begun by Hoffmann who died after the first two volumes were published, and continued on by the young August Breithaupt, who completed the third and fourth volumes. In this monumental treatise, the Wernerian doctrine of mineralogy is propagated in its fullest treatment. The authors accept all of Werner's theories concerning mineral formation and classification, and includes numerous illustrative examples. The text is extremely generous in its treatment of the subject, sometimes devoting long detailed sections to minute points. Werner did not publish much on his theories but his students and followers insured that his ideas would reach a larger audience by authoring their own works following his guidelines.

The first volume provides a short history of mineralogy, definitions, descriptions of physical properties, including color, optics, streak, hardness, specific weight, transparency, luster, and crystal form, chemical qualities, the use of the blow-pipe, nomenclature, and a synopsis of the classification system. Later volumes contain essentially a descriptive mineralogy. Under each species, all that was known is included in the descriptions.

HOFFMANN, Friedrich. (BORN: Halle, Germany, 19 February 1660; DIED: Halle, Germany, 12 November 1742) *German physician.*

Hoffmann was the son of Friedrich Hoffmann [1626-1675], a well-known municipal physician of Halle. In 1675, he lost both his parents and a sister within a few days. In his youth, he was educated at home, including instruction in anatomy and pharmacology. From 1678 to 1680, he studied medicine at the University of Jena, receiving his M.D. in 1681. Afterward, Hoffmann embarked on an extended tour of Belgium, Holland, and England, studying medical methods. In 1681, he accepted a position at the University of Jena, but soon left due to jealousy from the senior faculty. For the next decade he successfully practiced his craft in Minden and Halberstadt. In 1693, Hoffmann was named the first professor of medicine at the University of Halle and charged with organizing the medical school. Except for a couple of tenures as court physician in Berlin, he remained in Halle.

RARE. Dissertation — University of Halle. The respondent was Johann Jakob Lerche [see note below]. The text provides a description of the types of fossils and minerals found in the vicinity of Halle. It is divided into six chapters and discusses mineral springs, earths useful to medicine and manufacture, figured stones, fossils, salts, and metals and minerals. References are given through out to the major mineralogical works of the time.

Johann Jacob Lerch (Lerche). (BORN: Potsdam, ??, 27 December 1703; DIED: St. Petersburg, Russia, 23 March 1780) *German physician.* Lerch emigrated to Russia in 1731, becoming from 1732 to 1736 a field doctor in the Russian army stationed in Persia. Between 1745 and 1748, he made two extensive trips throughout the region. He participated in a war between Russia and Turkey in 1770, before retiring to St. Petersburg.

[Second suppl., vol 2] [2 pgs], Title page, verso blank.; [2 pgs], "Conspectus | Partis Tertiæ."; [1]-194, Text.

VERY SCARCE. This is the third edition of the collected works of Hoffmann and second edition of all the supplements to the original *Opera Omnia* (1740-53). Hoffmann was a prolific writer, covering a wide scope of contemporary medicine. Included here is his most important medical contribution, the *Medicinae Rationalis Systematicæ*, as well as works on pediatrics, physiology, pathology, medical ethics and personal hygiene. Hoffmann was the first to provide descriptions of appendicitis, chlorosis, rubella and convulsive asthma with dropsy.

The son of a prominent German physician, Hoffmann (1660-1742) studied at Jena, and later worked with Robert Boyle in England before returning to teach medicine at Halle. He was a prominent practitioner and for a while served as physician to Frederick I of Prussia. Hoffmann is best known as the designer of the mechanico-dynamic system, in which health is conceived of as normal movement and disease as disturbed movement.

2311. — Latin, 1738 [Dissertation].

[Incorporated into an elaborate engraved mining scene:] De | Metallorum | Amplissim | Philosophorum Ordinis | indutlu | Johānes Georgius Hoffman | A.M. | et Johānes Benjamin Boëhmer | Lignicensis | Lipsia d. 23 Dec. 1738, | disserent.

8°: π^3 A-M⁴; 51 ℓ .; [6], [1]-96 p. Engraved title page, engraved by Kuhnel. PAGE SIZE: 224 x 180 mm.

CONTENTS: [2 pgs], Engraved title page, verso blank.; [1 pg], "Illvstrissimi | Collegii Metallici | [...20 lines of text...] | Ioannes Georgivs Hoffmannvs."; [1 pg], Blank.; [2 pgs], "Viri | Illvstrissime | Per-Illvstris | Excellentissimi Amplissimi | Doctissimi."; [1]-96, Text.

RARE. Dissertation, for which Johann Benjamin Boëhmer [1719-1754] was respondent. It contains observations about the origins, composition and analysis of various metals. The elaborate engraved title page depicts a cross section through an underground mine, and shows shafts, a water pump and ore haulage to the surface. Up top one sees technicians surveying the land and studying various samples.

HOLLANDUS, Johan Isaäc. *Dutch alchemist*.

Thought to be contemporary with Basilius Valentinus, Hollandus and his son are probably inventions, and never actually lived. They are said to be the first alchemists of Holland, and their techniques praised by Paracelsus, Boyle, and Kunckel. They are said to have lived in the fifteenth century because they do not cite any later authority, but no evidence has ever been found as to their true identity.

2313. — Latin, 1600 [First edition].

Magistri Joannis Isaaci Hollandi ... Opera Mineralia, sive de Lapide Philosophico, omnia, duobus libris comprehensa. Nunquam antehac edita, ac nunc primum ex optimis manu-scriptis Teutonicis exemplaribus fidelissimè in Latinum sermonem translata, à P.M.G., Middelburg, Richardus Schilders, 1600.

8°: A-Ee⁸; 224ℓ.; [16], [1]-431, [1] p. With dozens of small woodcut illustrations in the text, 2 woodcut initial letters, one woodcut tailpiece, cast fleurons, and roman and italic type.

VERY SCARCE. A classic among the alchemical texts, although the authorship is doubtful. It is written in a canting alchemical and almost unreadable. (Partington) "Of the person or persons called Hollandus very little is known. By those who consider them two persons, Isaac is regarded as the father and John Isaac as the son...The dates assigned to the Hollands are very various. They have been put in the thirteenth, fourteenth, and fifteenth centuries...Boerhaave said: 'they describe all the operations to the most minute circumstances..., write excellently of distillation, fermentation, putrefaction, and their effects, and seem to have understood at least as much of these matters as any of the moderns.'" They describe very skillful operations in enameling and in imitating precious stones.

The first edition of any work by the mysterious Johannes Isaac Hollandus, a Latin translation of a German manuscript of his treatises on mineralogy, alchemy and the philosopher's stone, and especially on the use of metal oxides to colour stones and crystals to make fake gems and precious stones. The charming little woodcuts show distilling and other equipment. The preliminaries include verses by the Zeeland notables Petrus Hondius, Enoch Sterthemius, and Cornelis Herls (d. 1625), and a 12-page dedication to Count Everard of Solms. The first and most important edition by the mysterious Hollandus, and a lovely little book with instructions for making fake gems and precious stones.

2315. 2nd edition, 1746: Sammlung unterschiedlicher bewährter Chymischer Schriften, ... Hand der Philosophen, Opus Saturni, Opera Vegetabilia, Opus Minerale, Cabala, de Lapide Philosophico, Nebst einem Tractat von den Irrgängen derer Alchymisten, Auctoris incerti, neue und verbesserte Auflage. Vienna, Johann Paul Krauß, 1746.

10 parts in 1 volume. 8vo. Title in red and black, 5 half-titles, 16 full-page engraved plates, several woodcut illustrations in text.

VERY RARE. Very rare second edition of collection of alchemical works in German by mysterious Johannes Isaac Hollandus. There are many uncertainties about his person. Firstly, it is unclear whether there is one Hollandus, Johannes Isaaci, or two persons, Johannes and Isaac. The date has long been a matter of controversy, but most scholars now maintain the latter half of the sixteenth or the beginning seventeenth century. The confusion was caused by the great similarity to Paracelsan writings, who was accused by some of having plagiarized Hollandus. It has now been established that Hollandus wrote after Paracelsus but wanted to pretend that he antedated his writings. He therefore omitted any mention of sixteenth century authorities, because Paracelsus died in 1541.

According to Partington, p. 207, Hollandus writes in a "canting alchemical style," "some of the recipes are clearly described," and furthermore that Hollandus believed that "each metal contains in its interior the

principle of the tincture of gold and silver and when the elixir is projected on the metal this principle comes to the surface and colours the metal yellow or white."

According to Ferguson, the present work was first published in Frankfurt in 1667, in an edition of 384 pages. This is the greatly enlarged (752 pages), second edition.

HOOKE, Robert.

Hooke's father John Hooke was the local vicar. It was the ambition of his parents that Robert should receive an education befitting him for Holy Orders, but he had a delicate constitution and although sprightly and quick-witted was unable to study on account of frequent and severe headaches.

After his father's death in October 1648, Robert Hooke went to Westminster School and soon displayed an outstanding ability in mathematics. In 1653 he entered Oxford University where his knowledge of mechanics and inventive skill was noticed by Robert Boyle who engaged Hooke as his assistant. Through Boyle's influence Hooke

HOOKE

was appointed Curator to the Royal Society on 1th November 1662 and on 3rd June the following year was elected a Fellow.

The genius of Hooke was justly rewarded by the Royal Society when they perpetuated his appointment as Curator with a good salary, providing him with apartments in Gresham College, Bishops-gate Street, where he resided for the rest of his life.

Elected Professor of Geometry at the College on 20th March 1665 Hooke concentrated on the invention of mechanical devices, the development of the microscope and the study of astronomy. From 1st October 1677 to 30th November 1682 he acted as Secretary to the Royal Society in addition to his other duties and edited seven numbers of the Philosophical Collections, substituted by him for the Society's Transactions. In spite of poor health since childhood Hooke was a prodigious inventor and his mind was so prolific that there was scarcely a discovery made which he did not claim to have conceived himself.

Hooke was involved in a Chancery suit concerning his salary in 1696 and although he won the case the ordeal brought about a further deterioration of his health. During the last year of his life blindness and swelling of the legs rendered him helpless and he died at Gresham College on 3rd March 1703 at the age of sixty-seven. He was buried in the local church of St. Helen.

RARE. *Micrographia* is one of the first books published under the the auspices of the Royal Society, and at a meeting of the Council held on November 23rd, 1664, the President was requested to sign the licence for the printing of the book. (Keynes)

Hooke was much more than a naturalist and never happier than when studying details of animal and vegetable structure under the microscope. In this work he describes and theorises in a most accurate and informative fashion upon the scale of an eel, the underside of a nettle leaf, the sting of a bee and the common moulds. He was no specialist like his successors who considered themselves experts in the use of the microscope; although they may have probed

deeper their work was confined to narrower limits. The lepidoptera are represented by a single species, the White Plume Moth *Alucila pentadactyla* L. or, as Hooke calls it, 'The White Feather-winged Moth' which he says is sometimes found on nettles.

The preface to the second edition contains the interesting information that the first edition of the *Micrographia* has 'grown extremely scarce and the price thereof greatly raised'. The fact is also mentioned that the original copperplate blocks were used for illustrating the second edition, with the exception of seven which had been lost and replaced by exact copies.

The first edition was reproduced in facsimile by Robert Gunther in 1938 as part of a larger work. Robert William Theodore Gunther was born at Surbiton, Surrey, on 23rd August 1869. After studying zoology at London and Oxford Universities he was appointed Lecturer at Magdalen College, Oxford, in 1897. Gunther published a number of works dealing with the history of science and died March 1940.

Facsimile reprint, 1938: Early Science in Oxford by R. T. Gunther Vol. XIII The Life and Work of Robert Hooke (Part V) *Micrographia*, 1665. Oxford, Printed for the Subscribers 1938. 8°: x, [36], 274 p.

[i]-x, preliminary matter; pp. [36]+256 facsimile reprint, issue 1665; pp. 257-270 index reprinted from the abridgement of the 1780 issue, no. 40; pp. 271-274 supplementary index (1938).

Journal | of a | Tour In Iceland | in | The Summer | of | 1809. | [double rule] *By | William Jackson Hooker, F.L.S. | And | Fellow Of The Wernerian Society Of | Edinburgh. |* [double rule] *Yarmouth: | Printed by J. Keymer, King-Street. |* [short rule] *1811. |* [double rule] *Not Published.*

8°: lxii, 496, [7] p., colored frontispiece, illustrations, 2 plates (one folding).

RARE. Published in only 500 copies, this privately circulated edition of Hooker's *Journal* describes the natural wonders of the island of Iceland, and most particularly the botany of that remarkable land. Of independent means, Hooker was able to travel and to take up as a recreation the study of natural history, especially ornithology and entomology; however, he

JOURNAL, 1811

subsequently confined his attention to botany. In the summer of 1809 he made his first botanical expedition to Iceland, but the natural history specimens which he collected, together with his notes and drawings, were lost on the homeward voyage through the burning of the ship, and the young botanist himself was lucky to escape with his life. His good memory, however, allowed Hooker to publish an account of the island, and of its inhabitants and flora as *Journal of a Tour in Iceland*, which was privately circulated in 1811, and reprinted in an expanded edition in 1813.

Science | For The | School And Family. | Part III. | Mineralogy And Geology. | By | Worthington Hooker, M.D., | [...3 lines of titles and memberships...] | Illustrated with nearly Two Hundred Engravings. | New York .. Cincinnati .. Chicago | American Book Company.

8°: [i]-[viii], [9]-360, [8] p., 181 illus. PAGE SIZE: 182 x 114 mm.

CONTENTS: [i-ii], Title page, verso "Entered, according to Act of Congress, in the year one thousand | eight hundred and sixty-five,..."; [iii]-vi, "Preface."—dated January 1865.; [vii], "Contents."; [ix], Blank.; [9]-325, Text.; [326], Blank.; [327]-350, "Questions."; [351]-352, "Glossary."; [353]-360, "Index."; [8 pgs], Advertisements.

VERY SCARCE. Issued as the third in a series of elementary science textbooks written by Hooker, this is a good utilitarian approach to the geological sciences of the mid-19th century, with some mineralogical content.

"The book is intended to meet the wants of beginners in the study of geology, and especially young beginners. ... My object has been to produce a text-book fitted to prepare those who are wholly unacquainted with the subject for the farther study of it in the books of professed geologists."—*Preface*.

Chapters: 1. Mineral Substances. 2. Construction of minerals. 3. Carbon and its compounds. 4. Sulphur and its compounds. 5. Metals and their ores. 6. Oxy-salts and haloid salts. 7. Earthy minerals. 8. Rocks. 9. The earth as it is. 10. Present changes in the earth. 11. Construction of the earth. 12. Record of life in the rocks. 13. Azoic age. 14. Age of mollusks. 15. Age of fishes. 16. Age of coal. 17. Age of reptiles. 18. Age of Mammals. 19. Age of man. 20. Concluding Observations.

2326. — English, 1747 [First edition].

The | Miners Dictionary. | Explaining | Not only the Terms used by Miners, | But also Containing | The Theory and Practice | Of that most Useful | Art of Mineing, [sic] | More especially of | Lead-Mines. | I. How a Gentleman may know whether He has Mines | in his Land, or not. | II. How he may know the cheapest and best Way to come at | Them. | III. The Method of carrying Them on, in order | to make them Profitable Works. | Together with a large Account of all necessary Materials | that are required, conducive thereto. | The Whole being ver great Use to all Miners | and Gentlemen, who have Miners in their own Lands, | and all such as are concern'd in Mines. | Being Observations

made by the Author, | from more than Forty Years Practice and Experience, | at the Mines in the High and Low Peak in Der- | byshire, Shropshire, South and North-Wales, and the North | of England. | [rule] | By William Hooson, | A Derbyshire Miner. | [rule] | Printed for the Author, and T. Payne, | Bookseller in Wrexham. | MDCCXLVII.

8°: π^6 A-Y⁴ [a]⁴ b-d⁴; 115 ℓ .; [230] p. No pagination. PAGE SIZE: 200 x 120 mm.

CONTENTS: $\pi 1$, Title page, verso blank.; $\pi 2r$, Dedication, signed William Hooson.; $\pi 2v$, "The | Preface."; $\pi 3r$ - $\pi 3v$, "A | List | Of the | Subscribers."; A1r-Y4v, [a1r], Text.; [a1v]-[a2r], "The following Discourse is Inscribed to that | Honest and well Experienced Miner | John Staley, of Toulgrave, in Derbyshire."; [a2r]-d4v, "An | Appendix, | Concerning | The three Propositions in the Title | Page."

VERY RARE. The only edition, produced for just 48 subscribers, and totaling only 70 copies. Hooson was a practical Derbyshire miner, and although some of the terms and definitions are in a dialect particular to the period and location, there is never the less a great deal of practical information concerning the mining practices in the lead mines of Derbyshire of the time. Of consequence to mineralogy are the terms and definitions Hooson gives various mineral forms encountered during mining.

Facsimile reprint, 1979: *The miner's dictionary. explaining not only the terms used by miners, but also containing the theory and practice of that most useful art of mineing, more especially of lead mines ... being observations made by the author from more than forty years practice and experience at the mines in the High and Low Peak in Derbyshire, Shropshire, South and North Wales and the North of England.* by William Hooson. VERY RARE. Hornejus' *Compendium of Natural
Philosophy* collects together and reprints 13 disserta-
tions that he had presided over. These writings all
commented, elaborated and expanded upon the ancient
theories of Aristotle. Besides descriptions of Aristotle's
views on metaphysics, ethics and logic there is included
the 1618 dissertation that described the medical uses of
metals, stones and minerals that Johannes Christenius
defended. There are also included substantial material
on the uses of plants and animals.

Januarii; 1698 | H.L.Q.S. | [rule] | Tiguri, | Ex Typographeo Bodmeriano.

4°: π^1 A-E⁴ F²; 23ℓ.; [2], 1-44 p., one plate (showing various crystal specimens and diagrams).

CONTENTS: [2 pgs], Title page, verso blank.; 1-44, Text.

EXTREMELY RARE. At the age of 18, Johann Heinrich Hottinger authored and was respondent to this dissertation over which his uncle, Samuel Hottinger, presided. At the time, the Collegium Carolinum in Zurich was one of the great educational institutions of Europe, and it is perhaps through the influence of it famous professor, JOHANN JACOB SCHEUCHZER, that Hottinger was inspired to write this crystallography. In it, he gives a history and etymology of the term "crystal," classifies specimens according to external form, makes observations on crystal habit and concludes that crystals grew from solution. References are given throughout the text to contemporary literature.

HOUTTUYN, Martinus. (BORN: Hoorn, The Netherlands, 1720; DIED: 1798) *Dutch physician.*

Born the son of Dr. Willem Houttuyn, Martinus studied medicine in Leyden, where he graduated in 1749. After graduation he went to Amsterdam, where he opened a medical practice. He probably was related to the publishing house of Houttuyn in Amsterdam, and through

this connection was introduced to Jan Christiaan Sepp [1739-1811]. Their association caused Houttuyn to produce several important translations.

[Vol III, part 4, Tome 36, plates:] XXXV (p. 3) & XXXVI (p. 3), Krystallen van zouten, zwavels, steenen en metaalen. XXXVII (p. 211), Barnsteen en zwavelstoffen. XXXVIII (p. 309), Markasieten, kies-kristallen en pyrietten. XXXIX (p. 391), Cinnaber, bruinsteen en antimonie-erten. XL (p. 425), Spiesglas, schirl en veldspaat. XLI (p. 435), Zink-bismuth en kobalt-erten.

[Vol III, part 5, Tome 37, plates:] XLII (p. 13), Tinertsen. XLIII (p. 45), Loodertsen. XLIV (p. 91), Yzerertsen. XLV (p. 129), Yzerhoudende stoffen. XLVI (p. 155), Koperhoudende stoffen. XLVII (p. 229), Zilverhoudende stoffen. XLVIII (p. 259), Zilverertsen en goudhoudende stoffen.

VERY SCARCE. The five volumes described form the complete third and concluding section of the author's well known comprehensive description of the three natural kingdoms. Although the name of Linnæus is invoked in the title, this voluminous publication is, as Soulsby (1933) writes, "only slightly based upon on the *Systema Naturæ* under which it is so often cited, but influenced many similar works in other countries."

As a young man, Houttuyn decided to write an elaborate, well illustrated explanation of Linnæus' natural history method. Realizing that this project would take many years, he took the precaution of building up a large collection of natural history objects.

From this collection, specimens were chosen for illustration to support various points discussed within the body of the work. Publication began in 1761 and was completed 37 tomes and over 22,000 pages later in 1785. The complete work consists of three main parts, namely: zoology (18 vols., 143 plates), botany (14 vols., 105 plates) and mineralogy (5 vols., 48 plates). Each volume is well illustrated with copper plate engravings, and as was typical of the time, either plain or colored versions could be purchased from the publisher.

Mineralogy is covered in what Houttuyn called volume 3, parts 1-5, tomes 33 to 37. The plates are beautifully hand-colored examples of fossils, corals, marbles, stalactites, gypsum, calcite, agates, jaspers, precious stones, and various metallic ores. It ostensibly is based upon the tenth edition of Linneaus' *Systema Naturæ*; however, it is more a compilation than a translation.

RARE. Collection catalog of Hubert's accumulation, collected with great industry, cost and thirty-years travel in foreign countries. He had them exhibited to the public in a place called the "Musick-House, at the Miter, near the West End of St. Paul's Church." In preparation to selling the collection, he published this

CATALOGUE, 1664

catalog, which describes all manner of marvelous natural curiosities. Hubert's scheme worked, and the entire managerie was later purchased by the Royal Society for the bargain price of £100.

The first section of the *Catalogue* describes rare curiosities of human kind, animals, birds, fishes, serpents, and insects, while the second lists vegetables, and metals and minerals (p. 45-59).

CONTENTS: [i-ii], Title page, verso "London: | Printed By Stewart And Murray, | Old Bailey."; [iii], Dedication to the Duke of Richmond, Lennox and Aubig, signed William Humble, 27 February 1840.; [iv], Blank.; [v]-viii, Preface.; [1]-279, Text.; [1 pg], "London: | Printed By Stewart And Murray, | Old Bailey."

SCARCE. A comprehensive dictionary in English on the subjects of geology and mineralogy. Included are references to terms in the fields of botany, chemistry, comparative anatomy, conchology, entomology, palaeontology and zoology as they are connected to geology. In the preface, Humble writes that he undertook the compilation of this work because he failed to locate a dictionary containing such technological terms as are peculiar to this branch of science. Since the beginning of the eighteenth century, there had been a great increase in the knowledge of geology, especially in Britain, and these advances had ballooned the nomenclature of the science. Humble's book helped the reading public discover the meaning of these terms. The text is arranged alphabetically, and references are provided for some entries.

HUMBOLDT, Friedrich Heinrich Alexander, Freiherr von. (BORN: Berlin, Germany, 14 September 1769; DIED: Berlin, Germany, 6 May 1859) *German explorer & scientist.*

Humboldt travelled in Central and South America (1799-1804) and wrote extensively on natural history, meteorology, and physical geography. He proved that the Amazon and Orinoco river systems are connected, and ascended to 5,877 m (19,280 ft) in the Andes, the highest ascent ever made at that time, researching the relation of

HUMBOLDT

temperature and altitude. He spent the next 20 years in Paris writing up his results, returning later to Berlin, where he served at the Prussian court. He wrote a popular work in several volumes, *Kosmos* (1845-62), describing the structure of the Universe as it was then known.

Mineralogische | Beobachtungen | über |
einige Basalte am Rhein | [tapered rule] | Mit
| vorangeschickten, zerstreuten Bemerkungen |
über den Basalt der älteren und neuern |
Schriftsteller. | [tapered rule] | Braunschweig | in
der Schulbuchhandlung 1790.

8°: A-G⁸ H7; 63ℓ.; [i]-viii, [2], 11-126 p.

CONTENTS: [i-ii], Title page, verso blank.; [iii], Dedication to Georg Forster.; [iv], Blank.; [v]-viii, "Vorrede."; [9], Sectional title page.; [10], Blank.; [11]-74, Text.; [75], Sectional title page.; [76], Blank.; [77]-122, Text.; [123], "Nachtrag."; [124], Blank.; [125]-126, Text of the Nachtrag.

RARE. Published anonymously, with only the initials, "H-t", at the end of the introduction to indicate the actual author. This is Humboldt's first book written while he was still a student at the Universities of Frankfurt-an-der-Oder and Göttingen and in which he attacks the theories of volcanism but

MINERALOGISCHE BEOBACHTUNGEN, 1790

without fully supporting neptunism. During vacations, Humboldt made several geological excursions to the Harz Mountains and the Rhine and the present book is the result of his observations on basalt. This study foreshadowed Humboldt's life-long interest and investigations of volcanoes and earthquakes which were his most important contributions to geology. Humboldt dedicated the work to Georg Forster, who was the author's guiding influence and role model. Interestingly, the library of the Bergakademie in Freiberg possesses a presentation copy of the book dated 25 July 1790 which had been sent by the author to Werner, who later became Humboldt's most influential teacher.

The text is divided into two major sections. The first reviews the commentary on basalt by old and contemporary authors, with an introductory essay (pp. 11-37). Several subsections follow. The first describes the Syenite of the ancients (pp. 38-40). Another examines the views of Pliny and Strabo on basalt (pp. 41-67), while the file subsection describes the rocks and geology of the ancients (pp. 68-74). The second portion of the book provides Humboldt's observations on the basalt outcrops located along the Rhine river (pp. 77-126).

Facsimile reprint, 1991: *Mineralogische Beobachtungen über einige Basalte am Rhein mit vorangeschickten, zerstreuten Bemerkungen über Basalt der ältern und neuern Schriftsteller*. Freiberg (Sachsen), Bergakademie Freiberg, c1991. 136 p., with new preface. [Library of Congress, QE462.B3 H85 1991].

Voyage | De Humboldt Et Bonpland. | Première Partie. | Relation Historique. | [wavy rule] | Tome Premier. | [wavy rule] | A Paris, | Chez F. Schoell, Rue Des Fossés-Montmartre, N.º 14. | [wavy rule] | 1814.

6 parts bound in 30 vols. 2º: with numerous hand-colored maps and plates. Includes bibliographical references. PAGE SIZE: 525 x 334 mm.

VERY RARE. The famous *Voyage aux Régions Équinoxiales du Nouveau Continent, Fait en 1799-1804* is an account of Humboldt and Aimé Jacques Bonpland [1773-1858] scientific survey of Central and South America. It is not clear if any portion of this huge work contains any mineralogy; however, the 6th part is a famous and rare, richly illustrated botanical work. This massive work was published in 30 volumes over 25 years, describing the natural history, economy, ethnography and archaeology of Cuba and Central and South America. Considered one of the greatest publications in the history of exploration it is today still an important primary source for its contributions to topography, geography, zoology, botany, ethnography and geology. It describes three expeditions to different regions, each with its own scientific objectives:

1. The exploration of the Orinoco River, 16 July 1799 to 24 November 1800, covering 2000 square miles of uncharted and mostly unexplored jungle.

2. Travels to Cuba and through Peru, Colombia and Equador, from 24 November 1800 to 5 December 1802.

3. Researches in Mexico, from 5 December 1802 to May 1804.

The voyages led to many discoveries and scientific by-products, and the participants catalogued and drew 8000 plants, 4000 not previously described. They established the cause of periodic meteor showers, and gave a scientific basis to the geography of the territories visited. The many hand-colored illustrations of the original are today highly sought after.

Contents: 1. ptie. v. 1-3. Relation historique du voyage aux régions équinoxiales du nouveau continent. v. 4-5. Atlas pittoresque du voyage; vues des Cordillères. v. 6. Atlas géographique et physique des régions équinoxiales du nouveau continent. v. 7. Examen critique de l'histoire de la géographie du nouveau continent: analyse de l'Atlas géographique et physique. v. 8. Atlas géographique et physique du royaume de la Nouvelle Espagne.

2. ptie. Recueil d'observations de zoologie et d'anatomie comparée. 2 v.

3. ptie. Essai politique sur le royaume de la Nouvelle Espagne. 2 v.

4. ptie. Recueil d'observations astronomiques, d'opérations trigonométriques et des mesures barométriques. 2 v.

5. ptie. v. 1. Tableau physique des Andes et pays voisins. v. 2. Essai sur la géographie des plantes.

6. ptie. Botanique: Section 1. Plantes équinoxiales. 2 v. Section 2. Monographie des melastomaciées. 2 v. Section 3. Nova genera et species plantarum. 7 v. Révision des graminées. 3 v. Section 4. Mimosa et autres plantes légumineuses.

Facsimile reprint, 1971-3: *Voyage aux Régions Équinoxiales du Nouveau Continent, fait en 1799-1804, &c. Friedrich Heinrich Alexander von Humboldt and Aime Bonpland*. Amsterdam, New York, Theatrum Orbis Terrarum, Da Capo Press, 1971-1973. 30 vols. (20 in Atlas folio and 10 in Royal 4º) with 1470 plates and maps (1240 in colour). This edition is limited to 200 copies and is a reprint of the complete work, "Facsimilé intégral de l'édition de Paris, 1805-1834."

2357. — German, 1808.

Ansichten der Natur mit wissenschaften Erläuterungen. Von A. von Humboldt. Tübingen, 1808.

2 parts in one vol. 8º: xiii, 376 p.

VERY SCARCE. Humboldt's favorite book, published in 1808 this contains the author's opinions of nature. It expresses strongly and definitively the proof that experience of nature and scientific realization do not have to be a contradiction. Its overview reaches from the steps of and deserts of the waterfall at Orinoco up to the nocturnal animal life in the jungle. Today, the book is a treasure for geographers, botanists, historians, ecologists, meteorologists and biologists and an early, important work in pure science.

Many reissues, new editions and translations of this book appeared.

HUMPHREY, George. (BORN: 1739?; DIED: 1825) *English conchologist, collector & mineral dealer.*

Chief 'commercial naturalist' in Britain for many years. He was the brother-in-law of the mineral dealer JACOB FORSTER. He inherited the immense conchological and mineralogical collections accumulated by his father. Part of this accumulation was sold at auction during April and May 1779 (see: *Museum Humfredianum*), while another portion was discovered by G.B. Sowerby: J. De Carle Sowerby in *Mineral Conchology*, 6 (1826), p. 3 wrote, "the collection purchased by my brother from the late Mr G. Humphries" and (p. 5) "which has been for many years

unopened when my brother purchased it and disclosed its riches."

HUNT, Thomas Sterry. (BORN: Norwich, Connecticut, U.S.A., 5 September 1826; DIED: New York City, New York, U.S.A., 12 February 1892) *American miner-*

HUNT

alogist, petrologist & chemist.

Hunt lost his father at the age of twelve, and was obliged to earn his own livelihood. In the course of two years he found employment in a printing office, in an apothecary's shop, in a bookstore and as a clerk. He became interested in natural science, and especially in chemical and medical studies and entered Yale. In 1845, Hunt was elected a member of the Association of American Geologists and Naturalists at Yale—a body which in 1849 became the American Association for the Advancement of Science. At Yale, he became assistant to Benjamin Silliman [1779-1864]. In 1846, he was appointed chemist to the Geological Survey of Vermont. Hunt was elected F.R.S. in 1859 and was an original member of the Royal Society of Canada.

2363. — English, 1886.

Mineral | Physiology and Physiography. | A second series of | Chemical And Geological Essays | with

| A General Introduction. | By | Thomas Sterry Hunt, M.A., LL.D. (Cantab.) | [...7 lines of titles and memberships...] | Boston: | Samuel E. Cassino. | 1886.

8°: [2], [i]-xvii, [1], [1]-710 p.

CONTENTS: [2 pgs], Title page, verso blank.; [i], Dedication to Benjamin Silliman.; [ii], Blank.; [iii], Sectional title page, "Mineral | Physiology And Physiography."; [iv], Blank.; v-xii, "Preface."; [xiii]-xvii, "Contents."; [1 pg], Blank.; 1-686, Text.; 687-688, "Appendix."; [689]-710, "Index."

VERY SCARCE. Hunt came to mineralogy from a chemical background and examined the subject from that stand point. In his *Mineral Physiology and Physiography*, his researches into the chemical and mineral composition of rocks extended the theoretical framework for chemical geology and how it worked with in the earth.

Chapters: I. Nature in thought and language. II. The order of the natural sciences. III. Chemical and geological relations of the atmosphere. IV. Celestial chemistry from the time of Newton. V. The origin of crystalline rocks. VI. The genetic history of crystalline rocks. VII. The decay of crystalline rocks. VIII. A natural system of mineralogy. IX. History of Pre-Cambrian rocks. X. The geological history of serpentines, with studies of Pre-Cambrian rocks. XI. The taconic question in geology. The book is a thorough study if crystalline and metamorphic Rocks. It is as well a study of mineralogy and Precambrian Stratigraphy.

SYSTEMATIC MINERALOGY, 1891

Text.; [376], Blank.; 377-379, "General Index."; [380], Blank.; [381]-391, "Index Of Mineral Names."; [1 pg], Blank.; [15 pgs], Advertisements.

VERY SCARCE. A unique book in many respects and of considerable interest for the "natural history" method the author adopts for mineralogical classification. Remarkably, it advances material that is seldom found in other texts, and, overall, this book should be viewed as a highly interesting and instructive series of essays that give Hunt's ideas on various aspects of mineralogy. An excellent review of other important mineralogical systems of classification is included as are discussions on chemistry, physical properties, formation of minerals, theory of solution, crystallization, chemistry of species, nomenclature, etc. The text concludes with a good index.

HÜPSCH-LONTZEN, Johann Wilhelm Carl Adolph. (BORN: Cologne, Germany, 1726; DIED: Cologne, Germany, 1 January 1805) *German merchant.*

Dealer in natural history and antiques in Köln, alias "Johann Wilhelm Carl Adolph, Baron von Hüpsch, Herr zu Lontzen, zu Krickelhausen und auf der Motte." He owned a substantial personal collections his 'Kunstkabinett' in Cologne attracted numerous visitors. His cabinet of minerals was a frequent source for purchased and traded minerals to Caroline Louise von Baden. He bequeathed this collection to Ludwig X [1753-1810], Langrave of Hessen-Darmstadt, where it is still preserved today in the Hessischen Landesmuseum in Darmstadt.

2367. — German, 1768.

Neue in der Naturgeschichte des Nieder-Deutschlandes gemachte Entdeckungen einiger seltenen und wenig bekannten Schaalthiere : zur Erweiterung und Ergänzung des Thierreichs beschrieben von J. W. C. A. Freyherrn von Hüpsch. Frankfurt, Leipzig, In der Metternichischen Buchhandlung, 1768.

4°: 159 p., 4 folding plates.

VERY RARE. This work concerns fossil mollusks and other shells. It includes accounts of the new species discovered in Eifel in the Duchy of Juliers.

NOUVELLES, 1771

8°: 136, [8] p., 4 folding plates. PAGE SIZE: 198 x 120 mm.

VERY RARE. Translation of *Neue in der Naturgeschichte des Niederdeutschlands gemachte Entdeckungen* (Frankfurt und Leipzig, 1768). This beautifully printed treatise has the text contained within an ornamental border. The text is divided into three chapters: (1) Description d'une nouvelle espèce de coquille bivalve pétrifiée rare et inconnue jusqu'à présent découverte dans l'Eifel du Duché de Juliers, (2) Description de quelques Tuyaux cloisonnés pétrifiés récemment découverts et très singuliers, trouvés dans l'Eifel du Duché de Juliers, and (3) Description d'une nouvelle espèce de Coquille bivalve pétrifiée fort singulière, découverte depuis peu dans l'Eifel sur terre du Juliers.

SYNOPTISCHE UND SYSTEMATISCHE TABELLEN, 1797

2371. — German, 1797.

Synoptische und systematische | Tabellen | des ganzen | Naturalienkabinetts | des | Freih. von Hüpsch, | [...8 lines of titles and memberships...] | [rule] | I. Theil. Mineralreich. | [rule] | Zum öffentlichen Unterricht | in der | Naturgeschichte. | [rule] | Cöln am Rhein, | bei J.G. Langen, Buchhändler unter Fettenhennen. | 1797.

8°: [A]-C⁸ D⁴; 28ℓ.; [1]-55, [1] p. PAGE SIZE: 192 x 120 mm.

CONTENTS: [1], Title page in German.; [2], Title page in Latin.; [3], Title page in French.; [4]-39, Table of classification.; 39-47, "Beobachtungen" [in German]—signed, B. von Hüpsch, August 1797.; 48-55, "Observations" (in French)—signed, B. de Hupsch, August 1797.; [1 pg], Blank.

VERY RARE. No more published. Describes in a synoptically and systematic tabular arrangement the mineralogical portion of Hüpsch's natural history collection. The title pages in German, French and Latin indicate that the volume was published for a continental readership, perhaps in preparation for selling the collection. Some observations at the end of the volume are printed in both French and German, and contain minor details on the history of the formation of the collection.

CONTENTS: [2 pgs], Title page, verso "Alle Rechte vorbehalten."; [i], "Vorwort."; [ii], Blank.; [iii-iv], "Inhalt."; [1]-196, Text.; [1 pg], "Zusätze und Berichtigungen."; [1 pg], "Druk von Breitkopf & Härtel in Leipzig."; [At end], 4 plates.

VERY SCARCE. An important work in petrology, this is an introduction to the rock forming minerals. The text is divided into two parts: 1. Methods of examination and 2. Tables for the determination of minerals. The work gives more completely than had been before attempted in a single volue a description of the techniques used in determining the mineralogical study of rocks, using optical, chemical and mechanical operations. A second part gives a series of tables for the determination of the rock forming minerals, which condense a large amount of information down to a useful size.

HUYGENS, Christian. (BORN: Haag, The Netherlands, 14 April 1629; DIED: Haag, The Netherlands, 8 June 1695) *Dutch physicist & mathematician.*

Huygens studied law and mathematics at the University of Leyden. Afterwards he traveled extensively throughout Europe, living in Denmark and France before returning to The Netherlands. He discovered the laws of centrifugal force and invented the pendulum clock in 1655. He maintained that light was moved by waves through the æther, opposing Newton's corpuscular theory. He was made a Fellow of the Royal Society of London in 1663.

RARE. Classic formulation of the wave theory of light and its application to the refraction that occurs in Iceland spar represents an effective mechanistic explanation of natural phenomena. Developed by Huygens in the 1670's but published only

TRAITE DE LA LUMIERE, 1690

after the appearance of Newton's *Principia*, it offered a characteristically mechanical reply to the mathematically based explanation of Newton. However, Huygens work made a profound impression on Newton, as can be seen in the mechanistic orientation of Newton's *Opticks* (London, 1704). In 1802, Thomas Young exploited Huygen's theory to explain optical interference, which would play an important role in the optical aspects of mineralogy and crystallography of the nineteenth century.

Variant issue, 1690: The work comes in two issues for which no priority as been established. Issue A as above, while issue B has the line "Par C.H.D.Z." replaced with "Par Monsieur Christian Huygens, Seigneur de Zeelhem." Both titles are reproduced in Horblit.
